HIV Around the World (1)

HIV continues to be a major global public health issue, having claimed more than 36 million lives so far. In 2020, 680,000 people died from HIV-related causes globally.

There were approximately 38 million people living with HIV [PLWH] at the end of 2020 with 1.5 million people becoming newly infected in 2020 globally.

70% of adults and 54% of children living with HIV were receiving lifelong antiretroviral therapy [ART] in 2020.

The HIV Care Continuum reflects the series of steps a person living with HIV (PLWH) from initial diagnosis to being retained in care and achieving a very low level of viral load in the blood (viral suppression). The risk of HIV transmission is greatly reduced when people have an undetectable viral load.
