1 Dual/Quad/Triple Core is designed to improve performance of certain software products. Not all customers or software applications will necessarily benefit from use of this technology. Intel's numbering is not a measurement of higher performance.

2 For hard drives, GB=1 billion bytes. Actual formatted capacity is less. A portion of hard drive is reserved for system recovery software: for notebooks, up to: 8GB (XP and XP Pro), 12GB (Vista), 12GB (MCE). For desktops, up to: 10GB (Vista, XP, XP Pro), 12GB (MCE).

3 Wireless performance is dependent on physical environment, distance from access point.

4 Weight will vary by configuration

5 Battery life will vary depending on the product model, configuration, loaded applications, features, use, wireless

functionality (including the wireless functionality) and power management settings. The maximum capacity of the battery will naturally decrease with time and usage. See MobileMark07 battery benchmark www.bapco.com for additional details.
