**Re:** Miami International Airport  
Non-terminal Rental Rates  
October 1, 2015 – September 30, 2016

Dear Mr. González:

Pursuant to Resolution No. R-34-03, we are submitting a summary of our conclusions for:

- 1) Land Rental Rates
- 2) Paving Rates
- 3) Building Rental Rates

**Waronker & Rosen, Inc. (formerly as part of Quinlivan/Waronker Joint Venture)** has been preparing the annual rental rate report on the non-terminal properties at Miami International Airport since 1994. For the preparation of these annual reports, the following steps have been taken:

- Inspected non-terminal buildings at Miami International Airport in order to determine the condition of the buildings.
- Gathered and analyzed land sales in the areas surrounding Miami International Airport and derived appropriate rates of return on land value from various sources.
- Personally inspected non-terminal properties at major hub airports in the United States and interviewed property managers regarding land rental rates and non-terminal building rates at these airports.

Mr. Emilio T. González, Director  
Miami-Dade Aviation Department  
June 15, 2015

- Gathered and analyzed building rental rates in the areas surrounding Miami International Airport. The findings indicate there is a direct relationship between office building rental rates at Miami International Airport and the nearby off-airport office buildings rental rates and there is no particular advantage for office tenants being on the airport.
- Gathered and analyzed warehouse rental rates in the Airport West market area, just west of Miami International Airport as well as surrounding industrial markets. Results indicated there is a relationship between off-airport warehouse rental rates and cargo/warehouse rental rates on-airport. The security, minimum truck transportation and/or the ability to bring an aircraft to a cargo building are benefits of being on-airport. Therefore, on-airport cargo/warehouse buildings command a rental premium. This relationship between on-airport cargo rates and off-airport warehouse rates has been examined at other airports.

The market rental rates are based on the data, analyses and conclusions within a report that is available for review in our office. Market rent is defined as the rental income that a property would most probably command in the open market indicated by the current rents paid for comparable space as of the date of the appraisal.

After analyzing land sales surrounding Miami International Airport and land rental rates at comparable airports the following was considered in the conclusion of market land rates;

- 1) Subject land will be limited to airport and aviation purposes.
- 2) No assignment of leasehold without approval of the County.
- 3) No subordination permitted on said leasehold.
- 4) The General Use Master Plan.

After due study and investigation and taking all factors into consideration which apply to the area leased within the confines of Miami International Airport, it is our opinion that the market rent of the land, as of this date, is as reported on the sheet captioned "*Land Rental Rates*" (page 5).

The real estate market, specifically the Airport West industrial market, has remained active over the past three years with price levels for land continuing to increase. The land rental rate for Zone 1 was kept level for five (5) consecutive years and then was increased by \$.05 per square foot for the 2013 -2014 period and again for the 2014-2015 period. The continued resurgence of the real estate market and increasing land values is cause for an increase in land rents for the October 1, 2015 to September 30, 2016 period.

Mr. Emilio T. González, Director  
Miami-Dade Aviation Department  
June 15, 2015

In estimating the building rental rates, each building structure has been inspected, cargo/warehouse and office rentals in the area were reviewed, building rental rates at comparable airports were reviewed and developers/investors of airport cargo buildings were interviewed. All of the above comparable rental information is contained within the Self-Contained Appraisal Report which is retained in the appraisers' office.

In addition to the comparable building rental information, also considered was the following:

- 1) Use, occupancy and utility of subject improvements.
- 2) Condition and building life expectancy of said improvements.
- 3) Demand for such facilities at the airport.
- 4) Replacement cost estimate less depreciation.
- 5) No assignment of leasehold without approval of the County.
- 6) No subordination permitted on said leasehold.

The rental rates estimated herein presume that the building spaces are in rentable condition and are in compliance with life safety standards which are typical requirements of the landlord (MIA). Assumed is that the buildings have completed their 40 year recertification and meet the code requirements for Miami-Dade County. Such requirements include parking per building type which recently has become an item of concern for the airlines. It must be noted common area parking is not typically quantified as a separate component of rent. Some buildings and building spaces at Miami International Airport are unoccupied and are not in rentable condition. If the tenant decides to expend the cost to bring the building or building space into a rentable condition, the tenant should receive a rent credit at least equal to the amortization of the tenant's expenditure over the term of the lease.

Historically tenants at MIA that consider the building rental rates they are paying to be too high, are mostly attributable to deferred maintenance items that have been brought to the attention of MIA. The annual rents herein presume the spaces are in rentable condition, are in compliance with life safety standards, and have a 40 year recertification where applicable. It is typical for a landlord to perform maintenance such as touch up painting, repair of stress cracks, removal of plant growth in stress cracks or expansion joints, replace/repair signage not specific to one tenant, repair leaks and various other items that are not the responsibility of the tenant. Inspection of the buildings at MIA reveals many deferred maintenance items. Repairs which have not been done can affect the longevity of the improvements which ultimately affects the ability to collect rent and the rent that can be charged.

Upon termination of a lease, while the tenant remains in possession of the space to repair the premises back to leasable condition, the tenant will be responsible for land rent and utilities until the space has been repaired and is returned to the possession of MIA.

Mr. Emilio T. González, Director  
Miami-Dade Aviation Department  
June 15, 2015

Private ownership of large industrial and office developments typically have a reserve for replacement account, also known as a replacement allowance. These property owners set aside dollars annually to fund deferred maintenance and repair items. The amount set aside for replacements is often based on a percentage of the rent collected, or an amount per square foot of the building area. Recommended is MIA place at minimal \$.05 per square foot of the total building square footage into a reserve for replacement account that is available to the Real Estate Management Division for maintenance and repair of deferred maintenance items. The ability of Real Estate Management to cure deferred maintenance items quicker will enhance the remaining life of the improvements, help to offset higher repair expenses in the future and assist in leasing vacant spacer quicker.

There has been continued higher than typical vacancy level in the belly buildings. Previously it was recommended that MIA provide a discount program for available space in these buildings which would offer an 8% discount for every year of a new lease. Last year the rates for the belly buildings were decreased due to the lack of demand. These buildings, without direct access to a ramp area for airplanes, are in competition with newly constructed buildings off airport. While these buildings have the amenity of airside access, potential tenants consider the rent level too high for the benefits achieved. Rates in the belly buildings were decreased for the 2014-2015 period with the reduction not becoming effective until the start date of the first lease for belly cargo warehouse space in fiscal year 2015. For 2015-2016 the reduced rate, from last year, has been maintained.

Until last year vehicular and aircraft paving rates had not been increased since 2004. Cost of paving has increased over this period and each of these rates were increased by \$.05 to reflect increased costs of repaving. This year these costs were increased by an additional \$.05 per square foot.

The estimated market rents consider that the tenant is responsible for land rental, all utilities, and interior maintenance, except where noted.

Respectfully submitted,

Lee H. Waronker, MAI, SRA
