SCOPE:
This NOA is being issued under the applicable rules and regulations governing the use of construction materials. The documentation submitted has been reviewed and accepted by Miami-Dade County RER-Product Control Section to be used in Miami Dade County and other areas where allowed by the Authority Having Jurisdiction (AHJ).
This NOA shall not be valid after the expiration date stated below. The Miami-Dade County Product Control Section (In Miami Dade County) and/or the AHJ (in areas other than Miami Dade County) reserve the right to have this product or material tested for quality assurance purposes. If this product or material fails to perform in the accepted manner, the manufacturer will incur the expense of such testing and the AHJ may immediately revoke, modify, or suspend the use of such product or material within their jurisdiction.
RER reserves the right to revoke this acceptance, if it is determined by Miami-Dade County Product Control Section that this product or material fails to meet the requirements of the applicable building code.
This product is approved as described herein, and has been designed to comply with the Florida Building Code, including the High Velocity Hurricane Zone.

DESCRIPTION: Modern 2” Intellicore W8 DP46T Steel Sectional Garage Door up to 16'-2” Wide w/ Optional Impact Resistant Lites

APPROVAL DOCUMENT: Drawing No. 105002, titled “Modern Steel 2” Intellicore +46/-52 psf to 16’ Wide”, sheets 1 through 4 of 4, dated 05/25/2016, with revision 1 dated 07/18/2017, prepared by Clopay Building Products Company, signed and sealed by Mark Westerfield, P.E., bearing the Miami-Dade County Product Control revision stamp with the Notice of Acceptance number and expiration date by the Miami-Dade County Product Control Section.

MISSILE IMPACT RATING: Large and Small Missile Impact Resistant

LABELING: A permanent label with the manufacturer’s name or logo, manufacturing address, model number, the positive and negative design pressure rating, indicate impact rated if applicable, installation instruction drawing reference number, approval number (NOA), the applicable test standards, and the statement reading “Miami-Dade County Product Control Approved” is to be located on the door’s side track, bottom angle, or inner surface of a panel.

RENEWAL: of this NOA shall be considered after a renewal application has been filed and there has been no change in the applicable building code negatively affecting the performance of this product.

TERMINATION: of this NOA will occur after the expiration date of if there has been a revision or change in the materials, use, and/or manufacture of the product or process. Misuse of this NOA as an endorsement of any product, for sales, advertising or any other purposes shall automatically terminate this NOA. Failure to comply with any section of this NOA shall be cause for termination and removal of NOA.

LIMITATION: This approval requires the manufacturer to do testing of all coils used to fabricate door panels. A minimum of 2 specimens shall be cut from each coil and tensile tested according to ASTM E-8 by a Miami-Dade County approved laboratory. Every 3 months, the manufacturer shall mail to this office a copy of the tested reports. Only coils with average yield strength of 30,000 psi or more shall be used to make door panels for Miami-Dade County under this Notice of Acceptance.

ADVERTISEMENT: The NOA number preceded by the words Miami-Dade County, Florida, and followed by the expiration date may be displayed in advertising literature. If any portion of the NOA is displayed, then it shall be done in its entirety.

INSPECTION: A copy of this entire NOA shall be provided to the user by the manufacturer or its distributors and shall be available for inspection at the job site at the request of the Building Official.
This NOA revises NOA #16-0607.10 and consists of this page 1 and evidence pages E-1 and E-2, as well as approval document mentioned above.
The submitted documentation was reviewed by Carlos M. Utrera, P.E.

NOTES:
1. All load from the door is transferred to the track and then from the track to the 2x6 vertical stile (grade #2 or better) jamb. No load from the door is transferred to the horizontal (top) jamb.
2. Each vertical jamb sees a maximum design load of +380 lb. & -416 lb. per linear foot of jamb.
3. All jambs fasteners may be (but are not required to be) countersunk to provide a flush mounting surface.
4. A 1/3 stress increase for wind load was also used in the calculation of allowable loads for anchors and fasteners for steel, concrete and masonry.

NOTE: 2x6 wood jambs are not required with continuous angle mount track. However, if desired on steel, jambs or concrete or block walls, approved fasteners as detailed below should be increased in length by 1-1/2" and installed directly through the angle and 2x6 wood jambs into the steel jambs or concrete or block walls. Anchors can be flat and not required to be countersunk to provide a flush mounting surface. Continuous angle track can be anchored directly to a concrete reinforcement block wall or 2,000 psi min. concrete column on steel jambs.

2x6 JAMB TO SUPPORTING STRUCTURE ATTACHMENT

NOT TO BE USED FOR ATTACHMENT TO TRACK ANGLE TO 2X6 VERTICAL JAMS
