General Notes:

1. The VEE RIB structural metal siding panels consist of 24 gage 0.023" minimum thickness cold formed steel sheet conforming to the physical requirements of ASTM A653 Grade 50 (50,000 psi minimum yield stress) coating designation G-90 painted thickness of 0.023 inches or A792 grade 50, AZ55 or AZ50 coating.
2. The VEE RIB structural metal siding may be used as structural siding or curtain wall of buildings.
3. The VEE RIB structural metal panels shall be on steel supports not less than 0.06 inches in thickness with #12-14 threads/in x 1-1/4" long self-drilling screws with 9/16" integral washer and EPDM rubber washer. A fastener shall be located at each low flute. The sidelap joints shall be fastened with 1/4" diameter 14 threads per inch x 7/8" long stitch screws with same integral washer. Sidelap fasteners shall be placed between supports at a spacing not to exceed 15 inches between adjacent fasteners. Panel side seams shall be sealed with 3/16" x 1/4" wide butyl based polymer tape mastic.
4. The maximum wall panel span is 5'-0".
5. Using the more critical of the panel's maximum allowable structural properties, bending moment, maximum allowed fastener load, or L/240 deflection, the following equations define allowable wind pressure/suction for the support spacing. Support spacing must be selected from these equations to comply with the wind pressures specified in the 2023 Florida Building Code.
