PART 2 – PROJECT LIST..... 9

Part 2 – The Projects

Potential Mitigation Initiatives for Metropolitan Miami-Dade County

Part 2 of the Miami-Dade Local Mitigation Strategy – The Projects – is a compilation of countywide initiatives and projects. Each initiative or project is included herein as one or more descriptive paragraphs with a reasonable cost estimate where available. The idea of the project list is to let the world know that we thought of this before a disaster occurred. Each submitting jurisdiction or organization will also maintain a full, detailed project description as well as a detailed project budget, which may be required for a grant application.

Project Administration and Implementation

The projects listed in this section reflect the mitigation initiatives identified by each member of the LMS Working Group. The initiator of the projects will be responsible for implementation and administration. Due to the variable nature of procurement and contracting procedures; availability of resources; and weather conditions, accurate implementation timelines are difficult to predict. Therefore, implementation timelines will be developed for each project once funding sources are identified and the factors above can be determined relative to the prevailing operating environment. Grant requirements may also dictate project implementation timelines for the appropriate recipient. If the project is funded through a grant, the grantee is responsible for implementing these projects as outlined in the grant's regulations.

Countywide Initiatives

In the course of developing the Local Mitigation Strategy, it became apparent that certain mitigation measures had a countywide scope while others were on a smaller scale and best dealt on the departmental, municipal or private sector level. The countywide measures are referred to in this document as "initiatives" while the departmental, municipal and private measures are referred to as "projects." The countywide initiatives can be employed by any entity that participates in the Miami-Dade Local Mitigation Strategy. The LMS Working Group has been reluctant to prioritize these initiatives because each is of vital importance to all entities taking part in the development of the Local Mitigation Strategy. However, in deference to the State Division of Emergency Management, all projects and initiatives have been prioritized using methods discussed earlier in this document. The county, municipalities and all other members of the LMS Working Group reserve the right to, at any time, add to, delete from and in other ways change the order of priorities presented here. All entities participating in this program have agreed to undertake these initiatives, as necessary.

Shuttering and Windstorm Protection

There is one mitigation method that far exceeds all others in effectiveness and in benefit-to-cost ratio and that is shuttering or the installation of window protection against windstorms. Window protection is required by code in Miami-Dade County for all new construction and any substantial renovation. The LMS residential shuttering program and the LMS institutional shuttering program are two examples of LMS projects aimed to completely protect every facility in the county. Any project undertaken by an LMS participant that provides window protection or any other means to protect the building envelop is encouraged and will always be considered as part of the Miami-Dade Local Mitigation Strategy. Shuttering and other windstorm protection not only protects the building and its contents but, in many cases, frees up one or more shelter spaces because the occupants of the building may no longer have to evacuate.

Initiative 1: Flood Control and Reduction

Almost all of our communities consider the stormwater drainage systems to be one of the top priorities for mitigation. Measures to consider are increased use of injection wells (allowed in salt intruded areas only), increased number of ground recharge systems (French drains) and new, improved storm sewers. Partnership with the private sector is vitally important to make improvements, for example, to private parking lots that flood along with the adjacent public street. Other measures include facility elevation and/or retrofit and repetitive-loss property buyouts. Additionally, the initiative will encourage all municipalities not now a part of the National Flood Insurance Program's Community Rating System to participate in the program in the future. This initiative will seek to include recommendations made by the Miami-Dade Flood Management Task Force that was formed following Hurricane Irene in 1999 and the Governor's South Florida Flood Task Force formed following the October 3, 2000 storm (T.S. Leslie).

Cooperating agencies should be Miami-Dade Division of Environmental Resources Management (DERM), Miami-Dade Emergency Management (MDEM), Miami-Dade Public Works and Waste Management, Miami-Dade Water and Sewer Department (WASD), Florida Department of Transportation (FDOT), South Florida Water Management District (SFWMD), U.S. Army Corps of Engineers (USACE), United States Department of Agriculture (USDA), the National Park Service (NPS), FEMA including the National Flood Insurance Program (NFIP) and the municipalities.

Initiative 2: Sheltering and Evacuation

Miami-Dade County has far too few hurricane evacuation shelters. This initiative is to develop more evacuation centers, shelters of last resort and short-term shelters to be used for hazardous materials or other chemical, biological or radiological situations caused by spills, terrorism, vandalism, etc. Miami-Dade County Public Schools (MDCPS) currently provide the bulk of the shelter space. Transportation is currently provided by Miami-Dade Transit and MDCPS school buses. Develop methods to increase volunteer personnel to work in shelters. The ultimate goal is for all to be able to safely shelter in place. Additionally, this initiative includes windstorm protection to every possible building in Miami-Dade County.

Cooperating agencies should be MDEM, Miami-Dade Public Housing and Community Development, the American Red Cross, Miami-Dade County Public Schools (MDCPS), Miami-Dade Transit (MDT), Miami-Dade Police (MDPD), Miami-Dade Fire Rescue (MDFR), the Humane Society, South Florida Regional Planning Council (SFRPC), National Weather Service (Miami Forecast Office and the Tropical Prediction Center), the United States Coast Guard (USCG), the municipalities and the private sector.

Initiative 3: Counter-Terrorism

Terrorist acts have been a concern in Miami-Dade County since the late 1950's and early 1960's when Fidel Castro came to power in Cuba, just 90 miles off the coast of Florida. At that time there was a wave of bombings, which have continued off and on ever since. As for the Al Qaeda type terrorist, Miami offers an ideal hiding place with our large foreign population, over ten million tourists each year, and a couple of large universities. The time has come to address the concept of mitigation of terrorism rather than just preparation and response.

Cooperating agencies should be MDEM, American Red Cross, Health Department, MDFR, MDPD, MDT, Federal Bureau of Investigations (FBI), Bureau of Alcohol, Tobacco and Firearms (ATF), USCG and the municipalities.

Initiative 4: Debris Clearance

The hazard mitigation measure planned for debris is to reduce the cost of debris clearance by developing a plan of action prior to any event that generates large quantities of debris (hurricane or other severe windstorm). The tree trimming measure (see below) is a method to reduce any volume of debris.

Miami-Dade County has developed and will implement the "Coordinated Debris Clearance Plan" (CDC). The plan will be in place before any storm and reduces costs by eliminating competition or bidding wars for services of the contractor. Additionally, the plan locates staging area and storage sites and identifies removal meth-

ods. The plan also addresses hazardous materials handling, both pre-season pickup and amnesty days as well as post-event handling methods. This hazard mitigation initiative also addresses the acquisition of the necessary tools and equipment to handle debris. The plan was successfully implemented in the unincorporated part of the county following Hurricane Irene.

Cooperating agencies should be Miami-Dade Public Works and Solid Waste Management, MDEM, FDOT, Miami-Dade Expressway Authority, Miami-Dade Parks, Recreation and Open Spaces (PROS), DERM, SFWMD, the Cooperative Extension Service and the municipalities.

Initiative 5: Canals and Waterways

The canals and waterways of metropolitan Miami-Dade County form a huge system and these canals and waterways directly affect more than eighty percent of the municipalities as well as the unincorporated (UMSA) portion of the county. This initiative is to clean and maintain included exotic weed control, dredge when and where needed, clear banks of potential debris, and stabilize banks to prevent erosion. Clean canals allow better control of water levels, which greatly improves storm water management and the drainage system. (Note: This initiative is closely tied to Initiative 1: Flood Control and Reduction.)

Cooperating agencies should be Public Works and Solid Waste Management Public Works, MDEM, Parks, WASD, DERM, SFWMD, USACE, USDA Natural Resources Conservation Service (NRCS), USCG, National Park Service, Florida Inland Navigation District and the municipalities

Initiative 6: Tree Trimming

This initiative is to develop measures that reduce debris and protect the infrastructure from damaged sidewalks, curbs, water & sewer lines, power and phone lines (underground and overhead) and clogged storm drains. Also, the initiative identifies the best trees to plant; those that can stand wind, flood or drought. The concept is to develop specifications for contract pruning for unincorporated county and municipalities and to develop training classes in proper technique for homeowners and county/city employees.

Cooperating agencies should be the Cooperative Extension Service, Miami-Dade Public Works and Solid Waste Management, MDEM, MDCPS, PROS, DERM, SFWMD, Miami-Dade Public Housing and Community Development, Florida Division of Forestry and the municipalities.

Initiative 7: Transportation Systems

Before, during and after a disaster event, it is imperative that transportation systems continue to operate. Roads must be passable for evacuation and later for emergency vehicles. The airports, rail and ocean terminals must be open to allow emergency operations to proceed.

Sometimes, the transportation becomes the event. There were 18 railroad accidents in Miami-Dade County between January and October of 1998. (Railroads serving Miami-Dade: Amtrak, Tri-rail, CSX, Florida East Coast, and Metrorail.) In the past ten years there have been three fatal airplane crashes: Value Jet, Fine Air and Chalk's Ocean plus many other minor incidents. (Airports in Miami-Dade County are: Miami International, Opa-Locka, Tamiami, Homestead General, Opa-Locka West, Training & Transition and Homestead ARB.)

Port Miami includes the world's busiest cruise ship terminal plus a major cargo center and the Miami River is a continuously operating working river which is, by itself, the fifth busiest port in the state of Florida. This shipping plus the small boat traffic also rely upon unobstructed channels including the Intracoastal Waterway, Government Cut and Baker's Haulover inlet.

Mitigation measures include design and construction of highway systems, toll roads, expressways, bridges, traffic signs and signals that are disaster resistant and easily repairable. The same is also true of the entire countywide transportation systems.

Cooperating agencies should be Miami-Dade Aviation, Port Miami, MDT, MDPD, MDFR, MDEM, Public Works and Solid Waste Management, Miami-Dade Expressway Authority, Tri-rail, FDOT, SFRPC, USCG, USACE, the municipalities and privately owned transportation companies.

Initiative 8: Mechanical Maintenance of Critical Facilities

Breakdown of sewer lift stations, water pumping stations, drawbridges and other important mechanical devices affects everyone in the county. A wide program of mitigation is planned to ensure that these critical facilities do not fail during a disaster event or, in the event of catastrophic disaster that critical facilities are in place that may be brought up and running in a minimum of time with a reliable power source readily available. This program must be coordinated between the municipalities, the unincorporated services area and county maintained facilities everywhere.

Cooperating agencies should be: DERM, MDEM, Public Works and Solid Waste Management, WASD, Internal Services Government Services Administration (GSA), Port Miami, FDOT, SFWMD, SFRPC, USCG and the municipalities

Initiative 9: Public Information & Education

Develop a “How To” manual for public use in dealing with all-hazards/disasters. [English, Spanish, Creole.] Determine the best format: one single book or a series of pamphlets and brochures? Or all of the above, as in loose leaf cover which can contain a series of how to publications? Develop television and radio presentations. Implement a method for coordination between the various municipalities; between municipalities and the county; and between governments and the private sector. Publish all relevant National Flood Insurance Program (NFIP) and Community Rating System (CRS) information. Further develop specialized training programs such as CERT and shelter management, etc.

Cooperating agencies should be the MDEM, DERM, Public Works and Waste Management, Animal Services, Miami-Dade Regulatory and Economic Resources, Miami-Dade Community Information and Outreach, , MDT, MDFR and County Hazardous Materials teams, MDCPS, the American Red Cross, the Humane Society, The Marine Council, the municipalities, Cooperative Extension Service, FDEM, SFWMD, SFRPC, FEMA, U.S. Small Business Administration (SBA), USDA, USACE, National Weather Service (Miami Forecast Office and Tropical Prediction Center), local universities, the media, and the private sector.

Initiative 10: Hazardous Materials Response

(Also see sheltering)

Miami-Dade County has at least 190 sites that must report under Section 302. Miami-Dade County also has eight “superfund” sites. Miami-Dade County and the cities of Hialeah and Miami have official hazardous materials response teams. A program must be developed to refine inspections, material handling, education and all other aspects of hazardous materials response. The Miami-Dade Public Works and Solid Waste Management operates a permanent home chemical collection center open for resident to safely dispose of hazardous materials generated from the household. Amnesty days are conducted twice yearly. The Working Group would like to see more pickup locations added perhaps one each at the far northeastern part of the county and another in south Miami-Dade.

Cooperating agencies should be MDFR, MDPD, DERM, MDT, MDEM, PROS, Public Works and Solid Waste Management, MDCPS, WASD, USCG, American Red Cross, fire department hazardous materials teams (City of Hialeah, City of Miami and Miami-Dade County), Cooperative Extension Service and the municipalities.

Initiative 11: Controlled or Prescribed Burns

Wild fires/brush fires are becoming an increasing risk to metropolitan areas. The entire western and southern portion of the county is susceptible to this problem.

DERM's EEL Program (Environmentally Endangered Lands) controls hundreds of acres of undeveloped land scattered throughout the community including lots within municipal boundaries. The PROS' Natural Areas Management controls thousands of acres as well as does Everglades National Park. Controlled burns reduce fuel load and promote proper growth with the added advantage of the controlled growth of exotic plants.

Other measures for consideration in this initiative is to study and recommend fire-proofing measures such as new codes and standards for building materials, increased development and maintenance of fire breaks and better water transport and storage. Miami-Dade County will also strive to become a "Firewise" community.

Cooperating agencies should be MDRF, DERM, MDEM, PROS, Internal Services - GSA Risk Management, Florida Division of Forestry, Florida Fish and Wildlife Conservation Commission, Florida Department of Environmental Protection (DEP), Cooperative Extension Service, FDOT, National Park Service and the Nature Conservancy.

Initiative 12: Beach & Dune Restoration and Maintenance

The county plans re-nourishment or restoration of beaches to promote tourism and protect coastal structures and the development of a beach and dune maintenance program, which will develop and enhance the coastal dune system.

Cooperating agencies should be: DERM, MDEM, Public Works and Solid Waste Management, PROS, USACE, FLDEP, National Park Service, NOAA, Florida Inland Navigation District (FIND) and the municipalities.

Part 2 – Project List

This list is maintained in WebEOC and updated by the individual agencies upon request by the LMS Chair, two times a year in June and December. The updated lists are published in July and January.

Mid-Year Update 2014 LMS Projects - Miami-Dade

Agency	Project Title	Date of Update	Tracking Number	Status	Hazards	Project Type	Potential Grant Source	Estimated Costs	Global Match	Benefit Cost Review
Aventura	Stormwater Drainage Projects	03/13/2014 11:23:42	#315		Flood	Infrastructure (Water/Sewer/Drainage)				3
