Memorandum

MIAMI-DADE COUNTY

Date: March 2, 2010

Agenda Item No.
801ISupplement

To: Honorable Chairman Dennis C. Moss
and Members, Board of County Commissioners

From: George M. Burgess
County Manager

Subject: Supplement to Award Recommendation for Technology Products/Equipment and Technology Services/Solutions, Contract No. RQ09-997736-42B-D

This supplement is presented to provide additional detail regarding the intended use of Contract No. RQ09-997736-42B-D: Technology Products/Equipment and Technology Services/Solutions. At the February 2, 2010, Board of County Commissioners (Board) meeting additional information was requested regarding the awarded vendors and intended use of the contract. The three vendors recommended for award under this contract are Insight Public Sector, GTSI Corp., and Tech Depot (Solutions4Sure).

Vendor Performance

The vendors recommended for award have a positive track record in terms of professionalism, timeliness of deliverables and the ability to promptly address and resolve issues with their business partners or subcontractors. There have been no performance or compliance issues with any of the recommended firms.

The use of this contract enables the County to take advantage of the lowest available pricing in the market. U.S. Communities provides a network of public benefit services and products focused on assisting local government. More than 39,000 agencies nationwide use U.S. Communities' solutions which provide the participating agencies with aggregate purchasing power. By contracting with multiple agencies under this agreement, the pooled purchases allow for better quantity pricing. The awarded vendors will offer the County volume discounts as well as pass along Original Equipment Manufacturer (OEM) partner discounts to the County which could not be attained otherwise.

The following is a sample of projects that were successfully implemented under the previous U.S. Communities contract on time, within budget, and according to the specifications outlined by the user departments. All projects included GTSI engineers that either took the lead role or assisted the OEM's engineers in the design and implementation of the systems. Some of these contracts utilized local vendors to assist the awarded vendor, GTSI, in meeting the project objectives.

Miami-Dade Aviation Department

- Perimeter Security Project for the Miami International Airport: GTSI provided the required services and equipment needed to complete the perimeter security project for the Miami International Airport. The solution had a very aggressive timeline to ensure the new system was implemented before the grant deadline to not jeopardize the loss of grant funds. There was 47% local vendor participation. Ross and Barruzzini and Quality Communications, local firms, were utilized to assist on this project.

- WiFi Project at the Miami International Airport: GTSI partnered with Aruba wireless and negotiated pricing far lower than original estimates due to the conglomerate power of the U.S. Communities contract.

Seaport Department

- Transport Worker Identification Credential System (TWIC) Project: GTSI in-house engineers designed and implemented the first Transport Worker Identification Credential System (TWIC) at the Port of Miami. This is the first port in the United States to have successfully implemented a contactless biometric solution. The system required integration with the Florida Department of Law Enforcement, the Federal Bureau of Investigations, and National Crime Information Center databases. This solution enhances the safety of the Port's cruise passenger terminals and expedites the verification of cargo workers entering secure areas.

- Port of Miami Radar and Surveillance Project: GTSI engineers designed and implemented a complex project which required collaboration with various agencies and OEM engineers to customize a new radar system. This enabled the entire security system used at the Port of Miami to integrate with the existing access control system. The success of this project has contributed to making the Port of Miami one of the most technologically advanced ports in the world.

Enterprise Technology Services Department

- Motorola 311 System Implementation Project: GTSI was the prime contractor that coordinated the implementation of the 311 System along with County staff. GTSI acted as an advocate on behalf of Miami-Dade County to assist in negotiations between the County and Motorola to mitigate risk and reduce cost.

Board of County Commissioners

- GTSI was the prime partner that brought the Virage "Webcasting on Demand" solution into production. This webcasting solution has brought TV quality video to constituents throughout the County.

The County has considerable experience with the three vendors recommended on this contract. The chart below outlines each vendor's past County experience and total orders to date.

Vendor Name	Past County Experience	Contract Orders
Insight Public Sector	08/02/2001 (8-1/2 Years)	$ 18,452,904
GTSI Corp.	07/01/2004 (5-1/2 Years)	$ 21,044,742
Tech Depot	05/01/2008 (1-3/4 Years)	$ 1,228,219

Attachment 2 contains the full history report by vendor providing additional detail as to each vendor's history with the County.

Company Location

- Insight Public Sector has a regional office located in Lake Mary, Florida. Sales and distribution locations are located throughout the United States. The corporate headquarters are located in Bloomington, Illinois.
- GTSI has a Southeast United States regional account executive based in Jupiter, Florida. The corporate headquarters are located in Herndon, Virginia.
- Tech Depot relies on an established network of sales locations and warehouse distribution facilities nationwide. The corporate headquarters are located in Trumbull, Connecticut.

Use of Subcontractors

The vendors recommended for award are the primary contractors responsible for fulfillment of the contractual obligations under the agreement. Each vendor has an established and extensive list of technology resellers / partners that they work with to meet the contractual requirements of the County on an as needed basis. This flexibility was a requirement of the Request for Proposals advertised by Fairfax County, Virginia as the lead agency for U.S. Communities. It is also advantageous to the County to have this flexibility to accommodate the various technology needs of County departments. The use of subcontractors on this contract will only be needed if the requirements outlined in the scope of services issued by the authorized Department can not be fulfilled by the awarded vendor (i.e. Original Equipment Manufacturer). It is anticipated that much of this work will not require the use of a subcontractor and will be performed by the awarded vendors.

Attachment 1 contains the full listing of resellers / partners that each awarded vendor is currently authorized to work with based on the national contract.

Assistant County Manager
