

Memorandum

Date: July 8, 2010
To: Honorable Chairman Dennis C. Moss
and Members, Board of County Commissioners
From: George M. Burgess
County Manager

Supplement to
Agenda Item No. 2C1

Subject: Report Regarding the County's Hurricane Preparedness Efforts

This report has been revised per the request made during the July 8, 2010 Board of County Commissioners (Board) meeting to include references to Ordinances 06-40 and 06-41, which mandated generators at fuel stations and food stores.

This report is provided in response to the request for further information regarding the County's hurricane preparedness efforts during the June 15, 2010 Board of County Commissioners (Board) meeting. The report contains the County's hurricane evacuation zone maps, hurricane evacuation centers, emergency bus pick up points, generator ready retail establishments and various post storm activity information.

Evacuation Zone Map (Attachment A)

The Evacuation Zone Map for the County accounts for the barrier islands, potential storm surge impacts, and flood prone areas. The areas designated in the map are divided into three categories – Zones A, B, and C.

Zone A is designated by the red areas in the map and includes Miami Beach, Virginia Beach, Key Biscayne, and islands lying within Biscayne Bay including the municipalities of Golden Beach, Sunny Isles Beach, Bal Harbor, Bay Harbour Islands, Indian Creek Village, Surfside, North Bay Village, Miami Beach, and portions of the City of Miami. Also included in Zone A is the area known as the 8 ½ square mile area.

Zone B (yellow areas) are all the areas of mainland Miami-Dade County lying (north to south) east of Biscayne Boulevard, Brickell Avenue, South Miami Avenue, South Bayshore Drive, Main Highway, Ingraham Highway, Old Cutler Road, the Florida Turnpike south to US 1 to State Road 9396, SW 192nd Avenue and Ingraham Highway South to Everglades National Park.

Zone C (green areas) are the areas of Miami-Dade County west of Zone B and a line delineated by SW 152nd Street (Coral Reef Drive) at Old Cutler Road going west to US 1 then south to SW 184th Street then west to SW 127th Avenue then US 1 south to SW 312 St then west to Everglades National Park.

Hurricane Evacuation Centers

At the beginning of each year, the Miami-Dade County Public Schools (MDCPS) presents the American Red Cross of Greater Miami & The Keys (ARC) and the Miami-Dade Department of Emergency Management (DEM) with a list of schools available for use as hurricane evacuation centers. The ARC 4496 Guidelines set the minimum hurricane shelter selection standards county emergency managers must use when surveying and evaluating potential hurricane evacuation centers. The ARC 4496 addresses such areas as geographic location (i.e. outside of pre-determined evacuation zones), storm surge inundation, rainfall flooding, lay-down hazard exposure, wind and debris exposure, wind design, construction type, building condition, exterior wall construction, window protection, roof construction and emergency power. A structural engineer and ARC conduct a survey

to determine the evacuee capacity required for each school that receives the designation of a hurricane evacuation center.

In the mid-1990's, a public shelter design criteria titled "Enhanced Hurricane Protection Area" (EHPA), was used to ensure that new schools could meet or exceed applicable construction standards. Since the inception of the EHPA criteria, DEM has prioritized schools with EHPA when choosing hurricane evacuation sites. This is based on their increased structural integrity above the ARC 4496 standard.

The shelter list is based on consensus among ARC, DEM and MDCPS, geographic location, capacity, structural integrity, accessibility for people with disabilities and practicable amenities such as restrooms designed for adult use. The primary group of twenty hurricane evacuation centers is sorted into four waves of five schools that are geographically disbursed around the County. The primary hurricane evacuation centers meet all the aforementioned criteria and have a capacity greater than 1000 evacuees, have a full service kitchen, which can store a two to three day supply of food, ample parking and ensure that evacuees have access to all shelter areas in the facility during the lockdown period. The determination of how many hurricane evacuation centers to open depends on the extent of the evacuation order issued by the County Mayor. Once a hurricane evacuation center reaches 80 percent capacity, an additional hurricane evacuation center in the surrounding area is opened.

In addition to the primary general population shelters, the County also has two primary pet friendly shelters and two primary special needs shelters. Each is depicted in the attached map (Attachment B). DEM also has secondary and tertiary options in the event that these sites are not available.

Emergency Bus Pick Up Points

In the event an evacuation order is issued, individuals that are unable to provide their own transportation to a hurricane evacuation center can use public transportation. Miami-Dade Transit (MDT) would immediately activate non-stop service to all of the designated pick-up points and mobile home parks distinguished in evacuation zones A, B, and C. These pick-up sites are identified by signs that read "**EMERGENCY EVACUATION BUS PICK-UP SITE.**" The buses placed into service for the evacuation will have displays that read "**EMERGENCY EVACUATION**" and these buses will only travel between the pick-up sites and the opened hurricane evacuation centers. Buses provide non-stop service until sustained winds are at 39 mph at which point it is unsafe for high rise vehicles to operate. A list of the pick-up sites is provided in Attachment C.

Generator Ready Retail Establishments

After the very active hurricane seasons of 2004 and 2005 the Board of County Commissioners passed two local ordinances mandating generators at fuel stations and food stores, ordinance 06-40 and 06 41 respectively. Both ordinances were filed by Commissioner Joe Martinez and subsequent to the Board's action the State Legislature enacted legislation pre-empting Miami-Dade County and required fuel stations, at a minimum, must have a transfer switch and be pre-wired in order to operate on alternate generated power. The law applies to motor fuel retail outlets that meet certain county size and fueling position criteria and are located within one-half mile of an interstate highway or designated evacuation route. By contrast the County ordinances would have required every fuel station in the unincorporated and incorporated area to have an alternate power source.

As a result of the new state law, several fuel companies installed generators at fuel stations exceeding the State requirement of being pre-wired for alternate power sources. A list of fuel stations with generators is provided in Attachment D.

Hurricane Wilma was a defining moment for the private sector in South Florida since private companies suffered losses in the millions due to the loss of power for almost three weeks in some areas. It was estimated that the power outage cost more than \$300 million to Publix alone due to store

closures and food spoiling. As a result, Publix and other retail giants like Home Depot, Wal-Mart, Sedanos and Winn Dixie, all installed onsite generators capable of powering entire stores.

The three major grocery retail stores in South Florida (Publix, Sedanos, and Winn Dixie) have been plotted on a countywide map and serve as an important resources post storm (see Attachment E).

Post Storm

Post storm activities are just as important as the preparedness efforts mentioned above. Depending on the severity of damage from a storm, activities can range from debris clearing of major roadways, to the opening of Points of Distribution (PODs) sites, as needed, in order to return the community to normal as quickly as possible.

Debris Clearing

Debris clearing of county roadways is performed by the Public Works, Park and Recreation, and Solid Waste departments. Once tropical storm force winds have passed and it is safe for high profile vehicles to travel, work crews make an initial pass to clean up major section lines with the goal of clearing roadways for emergency and public safety vehicles within the first 72 hours. Sectors of the County roadways are pre-assigned and departments are aware of their areas of responsibilities (see Attachment F). Once the initial clearing is completed, crews then begin picking up debris and transport it to staging sites.

Damage Assessment

An important tool in determining the severity level is thru damage assessment which is done in two phases, the first identifying the initial hazard to the County and second, accounting for the overall impact. DEM utilizes a program called SnapShot whereby residents, Miami-Dade Fire Rescue, police departments (including municipal agencies), municipal building officials and County staff can report damage online. If the online option is not available, government agencies like police and fire have instructions to report damage in their area via 311. In addition, the agencies involved in debris clearance also report damage as they conduct their initial push. This information is used to determine whether or not the County will request assistance from the State and FEMA.

Points of Distribution

As mandated by the State of Florida, Miami-Dade County is required to survey and identify at least one County Staging Area (CSA) and multiple Points of Distribution (PODs). DEM is responsible for submitting this information to the Florida Department of Emergency Management (FDEM) no later than June 1st of each year.

POD sites will be used for the purpose of receiving and distributing necessary bulk emergency relief supplies, such as water, food and tarps within the first 72-96 hours after an event. The timeframe on opening a site will depend greatly upon the incident itself and the ability to set up locations. The purpose of each POD location is to provide emergency supplies when they are not readily available to the community. Supplies to be provided will be based on the emergent need of the community. POD openings are based on:

- Proximity to population that needs to be assisted.
- Area is without power.
- Food distributors are not open for business within a five mile radius as per State mandate.
- A boil water order issue is in effect within the impacted area.

PODs are categorized into three types serving anywhere from 20,000 to 5,000 people per day. The breakdown is as follows:

- Type I PODs - approximately 125,000 square feet serving up to 20,000 people per day.
- Type II PODs - approximately 75,000 square feet serving up to 10,000 people per day.
- Type III PODs - approximately 45,000 square feet serving up to 5,000 people per day.

Currently there are 28 PODs countywide with at least one in every commission district.

The County's Disaster Assistance Employees (DAEs) are used whenever a disaster has impacted and there are a multitude of jobs that need to be accomplished during the recovery process. By organizing, training and mobilizing employees for disaster roles, the DAE Program gives employees a defined task in the community's disaster preparedness and recovery operations and fulfills the County's mission of meeting the community's needs. All Miami-Dade County employees are designated as either "Department Essential" or "Emergency Operations Center (EOC) Essential" employees. Department Essential employees report to their regular work assignments to assist with their department's role in the response and recovery efforts while employees designated as EOC Essential are part of the DAE Program. Possible assignments include, but are not limited to:

- Shuttering
- Shelter Management/Support
- EOC Support (DAE Command)
- Call Center
- PODs
- Traffic Control
- Employee and Volunteer Staging Area
- Mobile Assistance
- Employee Wellness
- Disaster Assistance Centers

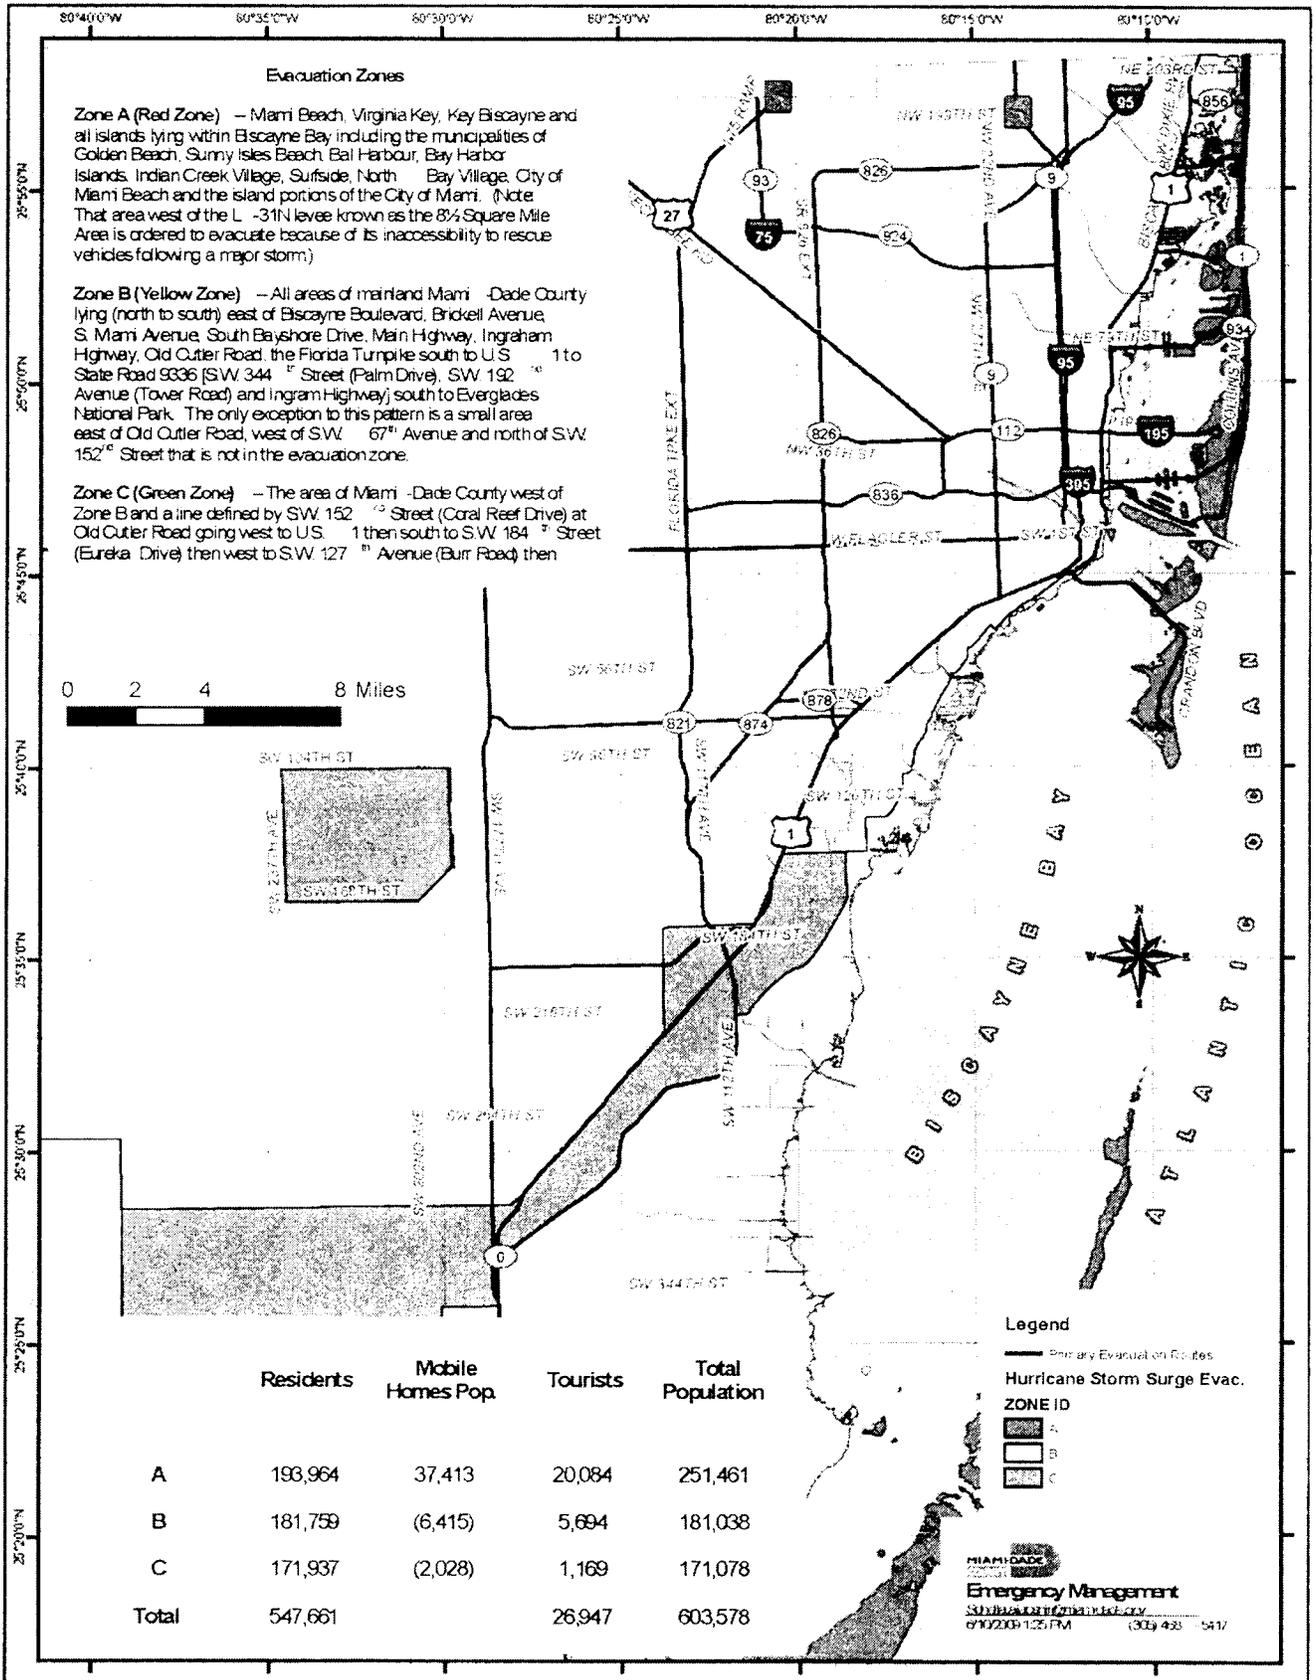

Roles may be pre-assigned or assigned as the situation dictates. Work assignments, contact information and training history is maintained in the County's employee data collection system commonly known as the BlueBook database.

Employees who have been designated as EOC essential personnel are given the opportunity to select a primary work area of interest however, the final assignment will be made by their Department Director or DPR in cooperation with the DEM. Assignments are made based on training, knowledge, skills, abilities, prior disaster experience and need. DAE staging areas may be utilized to deploy DAEs to their respective work assignment locations.

DEM's hurricane preparedness efforts and countywide plans are a State model for emergency management. After every activation and exercise, the EOC emergency plans are revised and updated to reflect best practices and lessons learned. I firmly believe all of our County departments are prepared and will fulfill their roles and responsibilities during an emergency. Please be advised that the DEM Director, Curt Sommerhoff has been meeting with Commissioner's to discuss hurricane preparedness efforts in full detail. If you have any further concerns or questions, please do not hesitate to contact Mr. Sommerhoff or me directly.

Assistant County Manager

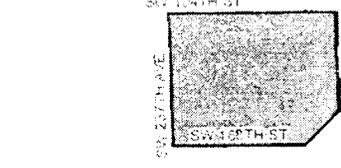

Evacuation Zones

Zone A (Red Zone) – Miami Beach, Virginia Key, Key Biscayne and all islands lying within Biscayne Bay including the municipalities of Golden Beach, Sunny Isles Beach, Bal Harbour, Bay Harbor Islands, Indian Creek Village, Surfside, North Bay Village, City of Miami Beach and the island portions of the City of Miami. (Note: That area west of the L-31N levee known as the 8 1/2 Square Mile Area is ordered to evacuate because of its inaccessibility to rescue vehicles following a major storm.)

Zone B (Yellow Zone) – All areas of mainland Miami-Dade County lying (north to south) east of Biscayne Boulevard, Brickell Avenue, S. Miami Avenue, South Bayshore Drive, Main Highway, Ingham Highway, Old Cutler Road, the Florida Turnpike south to U.S. 1 to State Road 9336 (SW 344th Street (Palm Drive), SW 192nd Avenue (Tower Road) and Ingram Highway) south to Everglades National Park. The only exception to this pattern is a small area east of Old Cutler Road, west of SW 67th Avenue and north of SW 152nd Street that is not in the evacuation zone.

Zone C (Green Zone) – The area of Miami-Dade County west of Zone B and a line defined by SW 152nd Street (Coral Reef Drive) at Old Cutler Road going west to U.S. 1 then south to SW 184th Street (Eureka Drive) then west to SW 127th Avenue (Burr Road) then
