COVID-19 Daily Positive Rate

Percent positivity for new cases in Florida residents
These counts include the number of Florida residents for whom the department received PCR or antigen laboratory results by day. This percent is the number of people who test positive for the first time divided by all the people tested that day, excluding people who have previously tested positive.

* Includes a one-time historical data submission from a laboratory newly enrolled in the Department’s electronic laboratory reporting (ELR) process. The percent positivity for Dade County on 8/11 excluding the historical data submission was 12.4%.

14-day average: 11.74%

Note: The 14-day average is calculated using a positivity rate of 12.44% for tests reported on 8/12 to account for the backlog of cases reported on such date
Data Source: The daily positivity rate as reported by the State of Florida on the "County Report"
COVID-19 Admitted Patients

Miami-Dade Fire Rescue Calls

MDFR Suspected COVID-19 Calls

Data Source: Miami-Dade Fire Rescue
An August 15th decision by the Florida Medical Examiner Commission determined that “treating physicians may certify COVID-19 deaths” so long as certain conditions are met. While this decision will expedite such process, it may result in the County’s ME reporting and certifying a lower number of deaths than the State. The administration will work closely with FDOH to ensure that the appropriate figures are reported.
