EXECUTIVE SUMMARY

The Calusa project is generally located between SW 127 Avenue and SW 137 Avenue and between SW 88 Street (Kendall Drive) and SW 104 Street in Miami-Dade County (MDC), Florida (see Exhibit 1). The project is proposing to convert the existing golf course into a residential development. The proposed uses include 481 Single Family Dwelling Units and 619 Townhomes. The main project access is proposed through the SW 97th Street with ultimate access to SW 127th Avenue. Secondary access will be provided via SW 130th Avenue to Kendall Drive. Project buildout is anticipated by 2028). The site is within Miami-Dade County's Urban Development Boundary (UDB).

The purpose of the study is to request a land use amendment (LUA) in Miami-Dade County's Comprehensive Master Development Plan (CDMP). The land is currently designated Parks and Recreation and was previously used as a golf course. The previous golf course is now (and has been) closed. It is our understanding that the applicant seeks the reformulation of County policy concerning the future use of the Property, and has asked the County to amend its land use map to designate the Property for residential use, including single family and townhomes, as more consistent with private ownership. We further understand that the applicant has broadly reserved rights pertaining to any limitation of the Property to "golf course" and/or "country club" use (including uses incidental thereto), as set forth in the application.

The traffic study was performed for existing conditions, a short term planning scenario (2019) and a long term planning scenario (2028, which corresponds to project build out) consistent with the guidelines published by Miami-Dade County Transportation and Public Works Department in the document titled *Instructions for Preparing Applications Requesting Amendment to the Miami-Dade County Comprehensive Development Master plan May 2016-17 Amendment Cycle* published by MDC. The analysis was performed using data from the most recent concurrency stations published by MDC. The analysis indicates that all roadways segment analyzed for existing conditions, short term (2019) conditions, and long term (2028) conditions are projected to operate within the MDC adopted level of service standards.

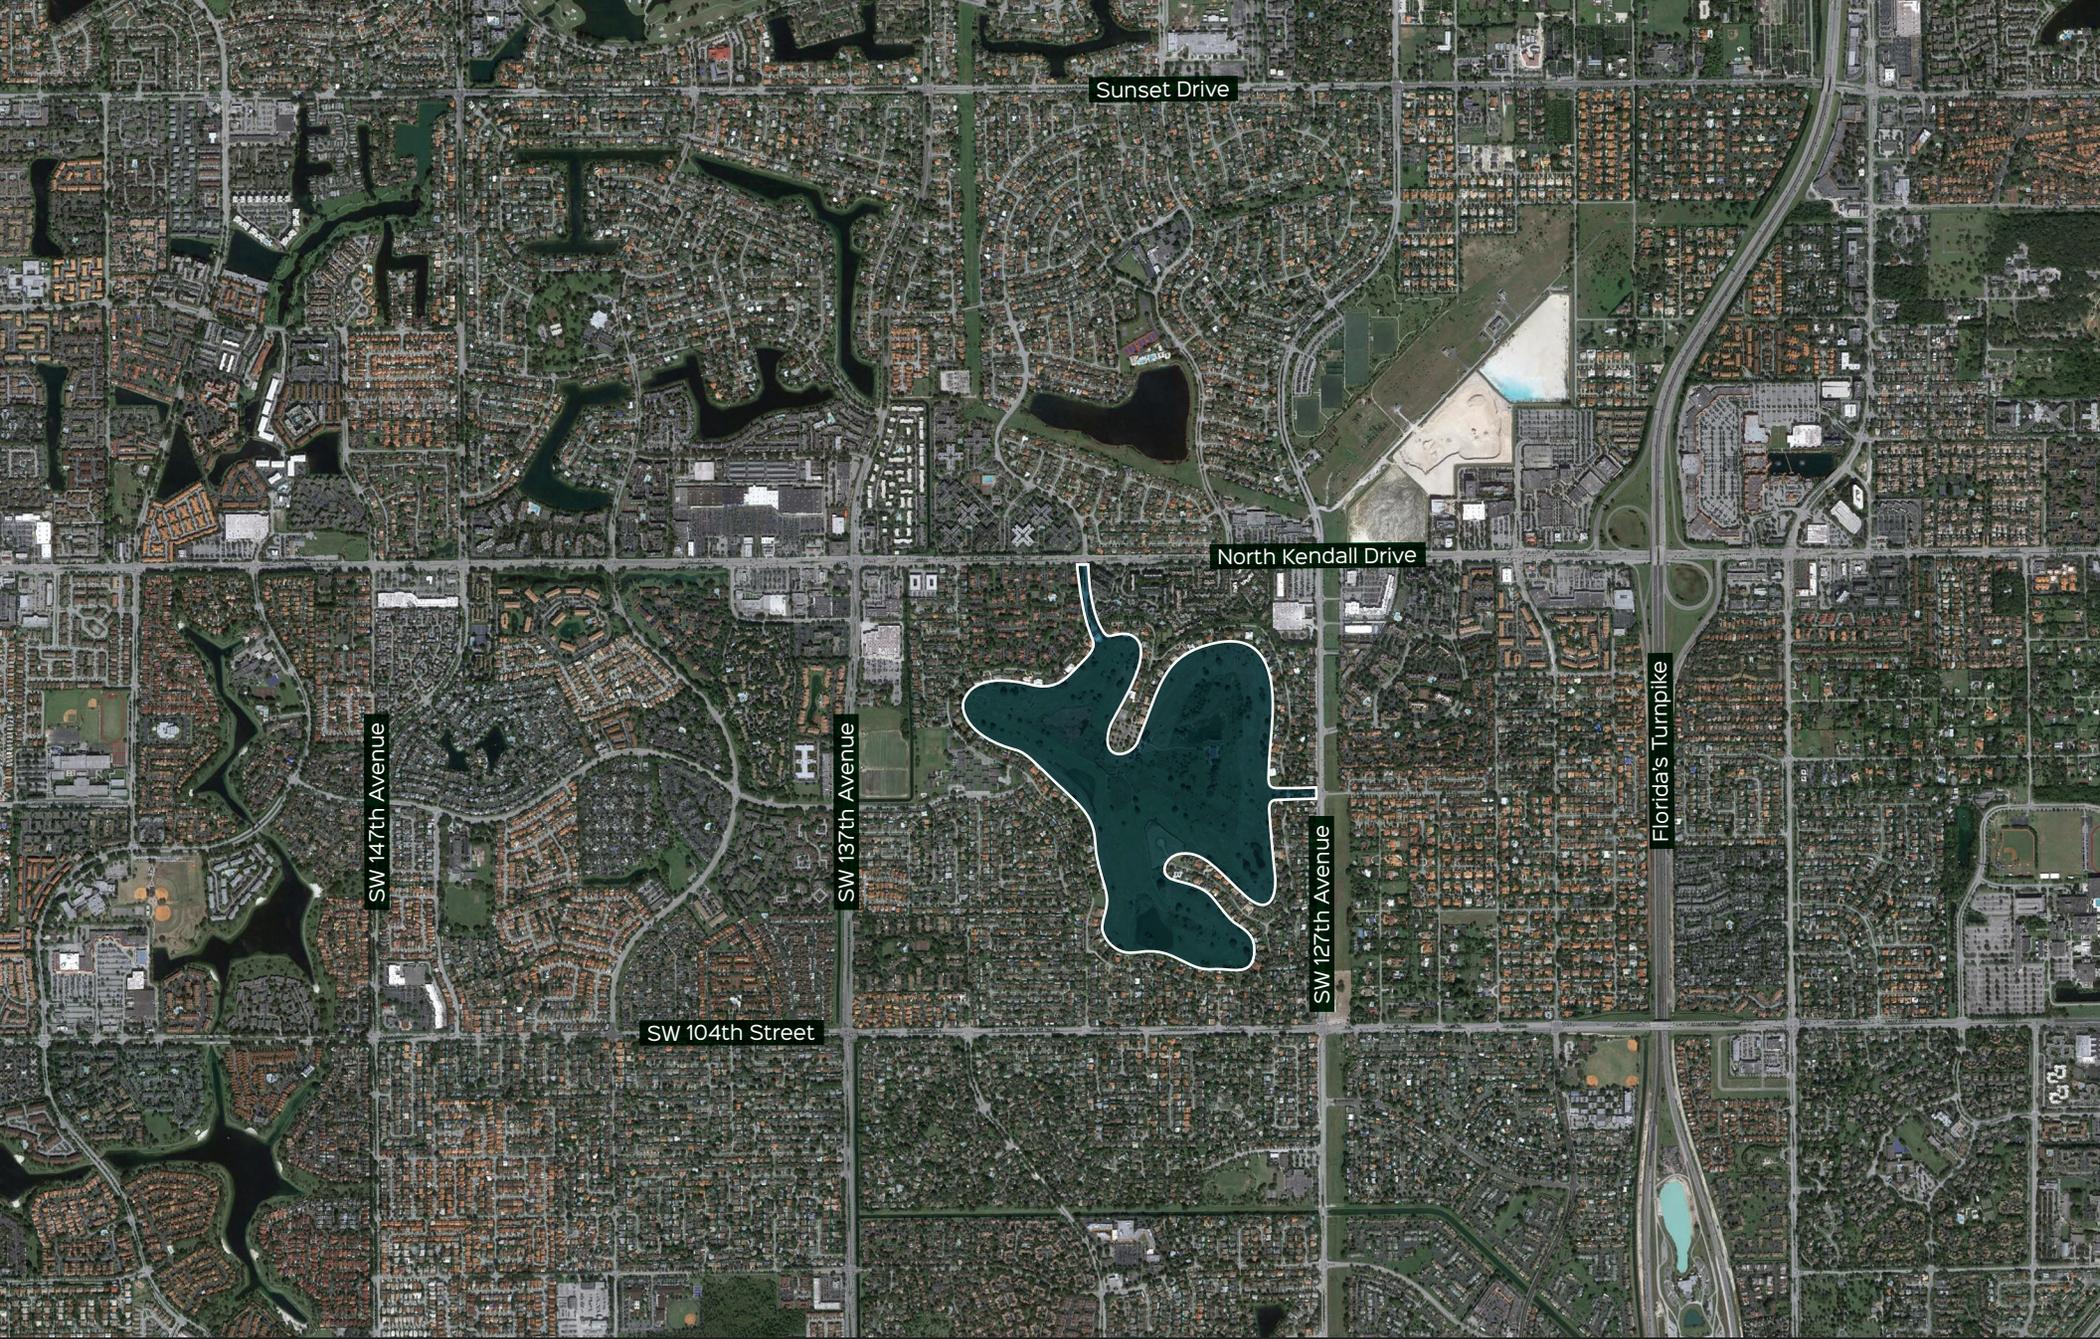

1.0 INTRODUCTION

1.1 Project Background

The Calusa project is generally located between SW 127 Avenue and SW 137 Avenue and between SW 88 Street (Kendall Drive) and SW 104 Street in Miami-Dade County, Florida (see Exhibit 1). The project is proposing to convert the existing golf course into a residential development. The proposed uses include 481 Single Family Dwelling Units and 619 Townhomes. The main project access is proposed through SW 97th Street with ultimate access to SW 127th Avenue. Secondary access will be provided via SW 130th Avenue to Kendall Drive. Project buildout is anticipated by 2028. The Site Plan is included in Appendix A. The site is within Miami-Dade County's Urban Development Boundary (UDB).

1.2 Study Objective

The purpose of the study is to request a land use amendment (LUA) in Miami-Dade County's Comprehensive Master Development Plan (CDMP). The land is currently designated Parks and Recreation and was previously used as a golf course. The previous golf course is now (and has been) closed. It is our understanding that the applicant seeks the reformulation of County policy concerning the future use of the Property, and has asked the County to amend its land use map to designate the Property for residential use, including single family and townhomes, as more consistent with private ownership. We further understand that the applicant has broadly reserved rights pertaining to any limitation of the Property to "golf course" and/or "country club" use (including uses incidental thereto), as set forth in the application.

 Project Location

Exhibit 1

Location Map

1.3 Study Area and Methodology

The traffic study was performed for existing conditions, a short term planning scenario (2019) and a long term planning scenario (2028, which corresponds to project buildout) consistent with the guidelines published by Miami-Dade County Transportation and Public Works Department in the document titled *Instructions for Preparing Applications Requesting Amendment to the Miami-Dade County Comprehensive Development Master plan May 2016-17 Amendment Cycle*. The analysis was performed using data from the most recent concurrency stations published by MDC.

2.0 EXISTING (2016) TRAFFIC CONDITIONS

2.1 Planned and Programmed Roadway Improvements

Analysis of existing traffic conditions was performed based on the concurrency database published by MDC. The data is a comprehensive analysis of conditions throughout the county. Roadway segments adjacent to and/or in the vicinity of the project were analyzed. The analysis, provided as Exhibit 2, shows that all roadways analyzed operate within the adopted level of service standard.

Exhibit 2
Existing (2016) Conditions Roadway Analysis

3.0 FUTURE TRAFFIC CONDITIONS

3.1 Planned and Programmed Roadway Improvements

The adopted 2016 *Miami-Dade County Transportation Improvement Program (TIP)* and the 2040 *Miami-Dade Transportation Plan Long Range Plan* were reviewed to identify any programmed or planned capacity improvements within the study area established. These are summarized in Exhibit 3. Additional documentation is provided in Appendix B. Consistent with established concurrency guidelines, funded improvements schedules for construction in the next 5 years are considered as part of the analysis. The widening of Krome Avenue from 2 to 4 lanes was considered in the analysis. Planned improvements are provided for reference purposes only. In addition, numerous multi-modal improvements are programmed and funded for the area.

3.2 Background Traffic

Average Daily Traffic counts published by the MDC and the FDOT were reviewed to determine historic growth in the area. Growth rate calculations and historic counts are provided in Appendix C. The analysis indicates that traffic has generally decreased in the past 10 years. A 1.0% growth rate was applied to account for background growth.

3.3 Project Trip Generation

Trip generation for the proposed land uses were estimated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition. This manual provides gross trip generation rates and/or equations by land use type for free standing facilities. Trip generation for the project was adjusted to reflect other modes of transportation. The area is currently served by numerous transit routes and extensive improved services are programmed within the next 5 years. Existing service is documented in Appendix D. Census data shows a 5.9% transit ridership throughout MDC and an overall use of other modes of transportation (documentation is also provided in Appendix D). A 5% alternate modes of transportation deduction was used in the analysis. This figure is

intended to reflect the existing, as well as enhanced future walk/bike/transit amenities provided and planned by Miami-Dade County for this area. Trip Generation for the project is summarized in Exhibit 4. Documentation is provided in Appendix E.

Exhibit 3 Committed and Planned Roadway Improvements

Committed Roadway Improvements (2016 TIP)					
Project Name	Project Number	Type of Project	Location	TIP Year	Description
Miami Executive Airport Internal Perimeter Road System	APV012A	Airport Improvement	Kendall - Tamiami Airport	2016	Construct a new road around the airport perimeter
SR 94 / Kendall Drive	DT4348453	Arterial / Collector	SR 997 / Krome Ave - SR 5 / S. Dixie Hwy	2016-21	Urban Corridor Improvements
SW 42 Street	PW000748	Arterial / Collector	SW 162 Avenue - SW 157 Avenue	2015	Widen from 2 to 4 lanes
Long Range Plan Roadway Improvements (2040 LRTP)					
Project Name	Project Number	Type of Project	Location	LRTP Year	Description
SW 72 Street	PW149	Arterial / Collector	SW 117 Ave - SW 157 Ave	2040	Add 2 lanes and reconstruct
SW 104 Street	PW185	Arterial / Collector	SW 147 Ave - SW 137 Ave	2040	Add 2 lanes and reconstruct
SW 104 Street	PW186	Arterial / Collector	Hammocks Blvd - SW 147 Ave	2040	Add 2 lanes and reconstruct
SW 104 Street	D128	Arterial / Collector	SW 160 Ave - SW 167 Ave	2040	New 4-lane / Widen to 4 lanes
SW 104 Street	D129	Arterial / Collector	SW 167 Ave - SW 177 Ave	2040	New 2 lane road construction
SW 120 Street	PW170	Arterial / Collector	SW 137 Ave - SW 117 Ave	2040	Add 2 lanes and reconstruct
SW 127 Avenue	PW133	Arterial / Collector	SW 120 St - SW 144 St	2040	Add 2 lanes and new 4 lane road construction
SW 40 Street	PW146	Arterial / Collector	SW 157 Ave - SW 167 Ave	2040	New 2 lane road construction
SW 42 Street	PW183	Arterial / Collector	SW 162 Ave - SW 157 Ave	2040	Add 2 lanes and reconstruct

**Exhibit 4
Trip Generation Summary**

Land Use	Intensity	Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Residential Condominium/Townhouse <i>(ITE LUC 230)</i>	619 Dwelling Units	3,141	38	184	222	180	88	268
Single Family <i>(ITE LUC 210)</i>	481 Dwelling Units	4,455	87	259	346	272	160	432
Total ITE Trip Generation		7,596	125	443	568	452	248	700
Other Modes of Transportation (-5%)		-380	-6	-22	-28	-23	-12	-35
Net New Project Trips		7,216	119	421	540	429	236	665

3.4 Project Trip Assignment

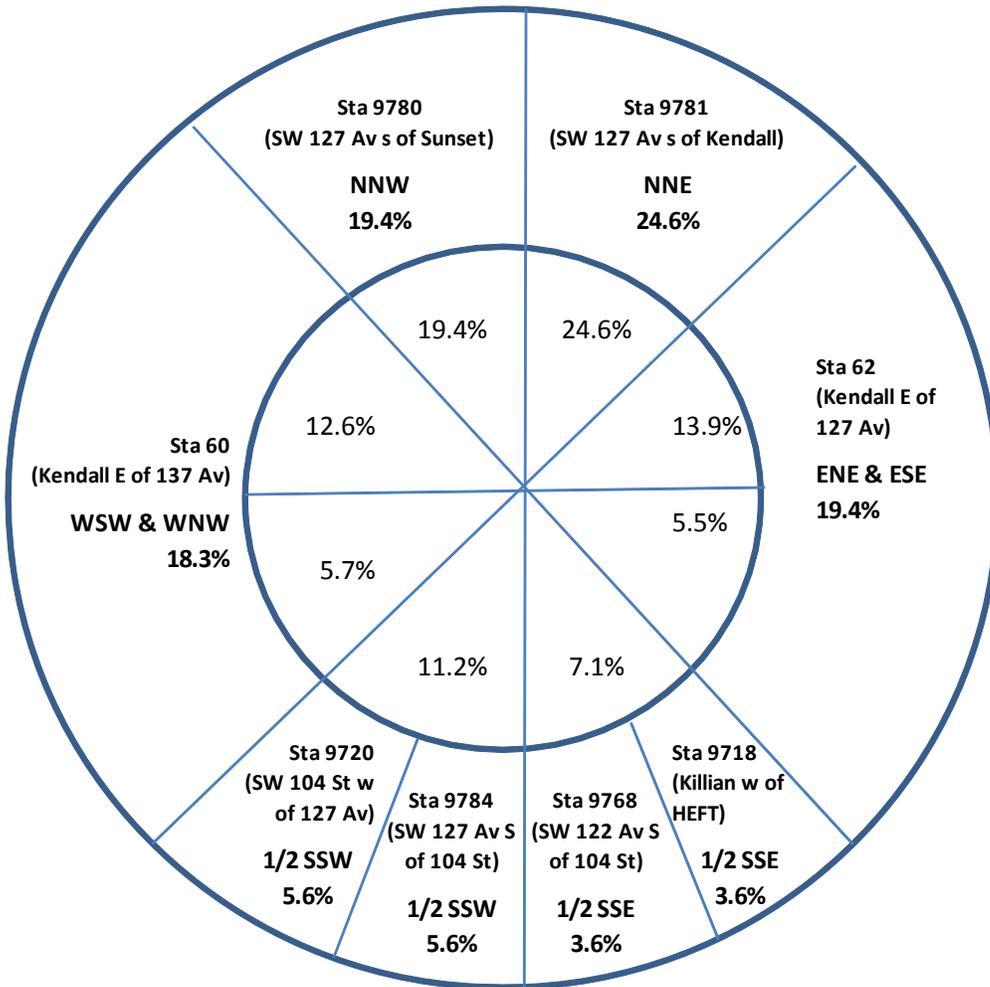

Project traffic assignment to the surrounding street network was established using the cardinal distribution obtained from the *MDC 2040 Long Range Plan*. The project is located in Traffic Analysis Zone (TAZ) 1232. Interpolation was performed between years 2010 and 2040 to obtain the appropriate distribution for the project area for the year 2019. The resulting cardinal distribution is presented in Exhibit 5. Documentation is provided in Appendix F.

The cardinal distribution provides a guideline and a generalized distribution of trips from a TAZ to other parts of MDC. For estimating trip distribution for the project traffic, consideration was given to conditions such as roadway network accessed by the project traffic, roadways available to travel in the desired direction, and attractiveness of traveling on a specific roadway. Project trip distribution is graphically portrayed on Exhibit 6.

**Exhibit 5
Cardinal Distribution**

TAZ	NNE	ENE	ESE	SSE	SSW	WSW	WNW	NNW
2010 CARDINAL DISTRIBUTION								
1232	25.8%	15.0%	4.9%	5.7%	10.2%	5.0%	13.1%	20.3%
2040 CARDINAL DISTRIBUTION								
1232	20.8%	11.0%	7.1%	11.1%	14.2%	7.7%	11.3%	16.8%
2019 CARDINAL DISTRIBUTION								
AVERAGE	24.6%	13.9%	5.5%	7.1%	11.2%	5.7%	12.6%	19.4%

**Exhibit 6
Project Trip Distribution**

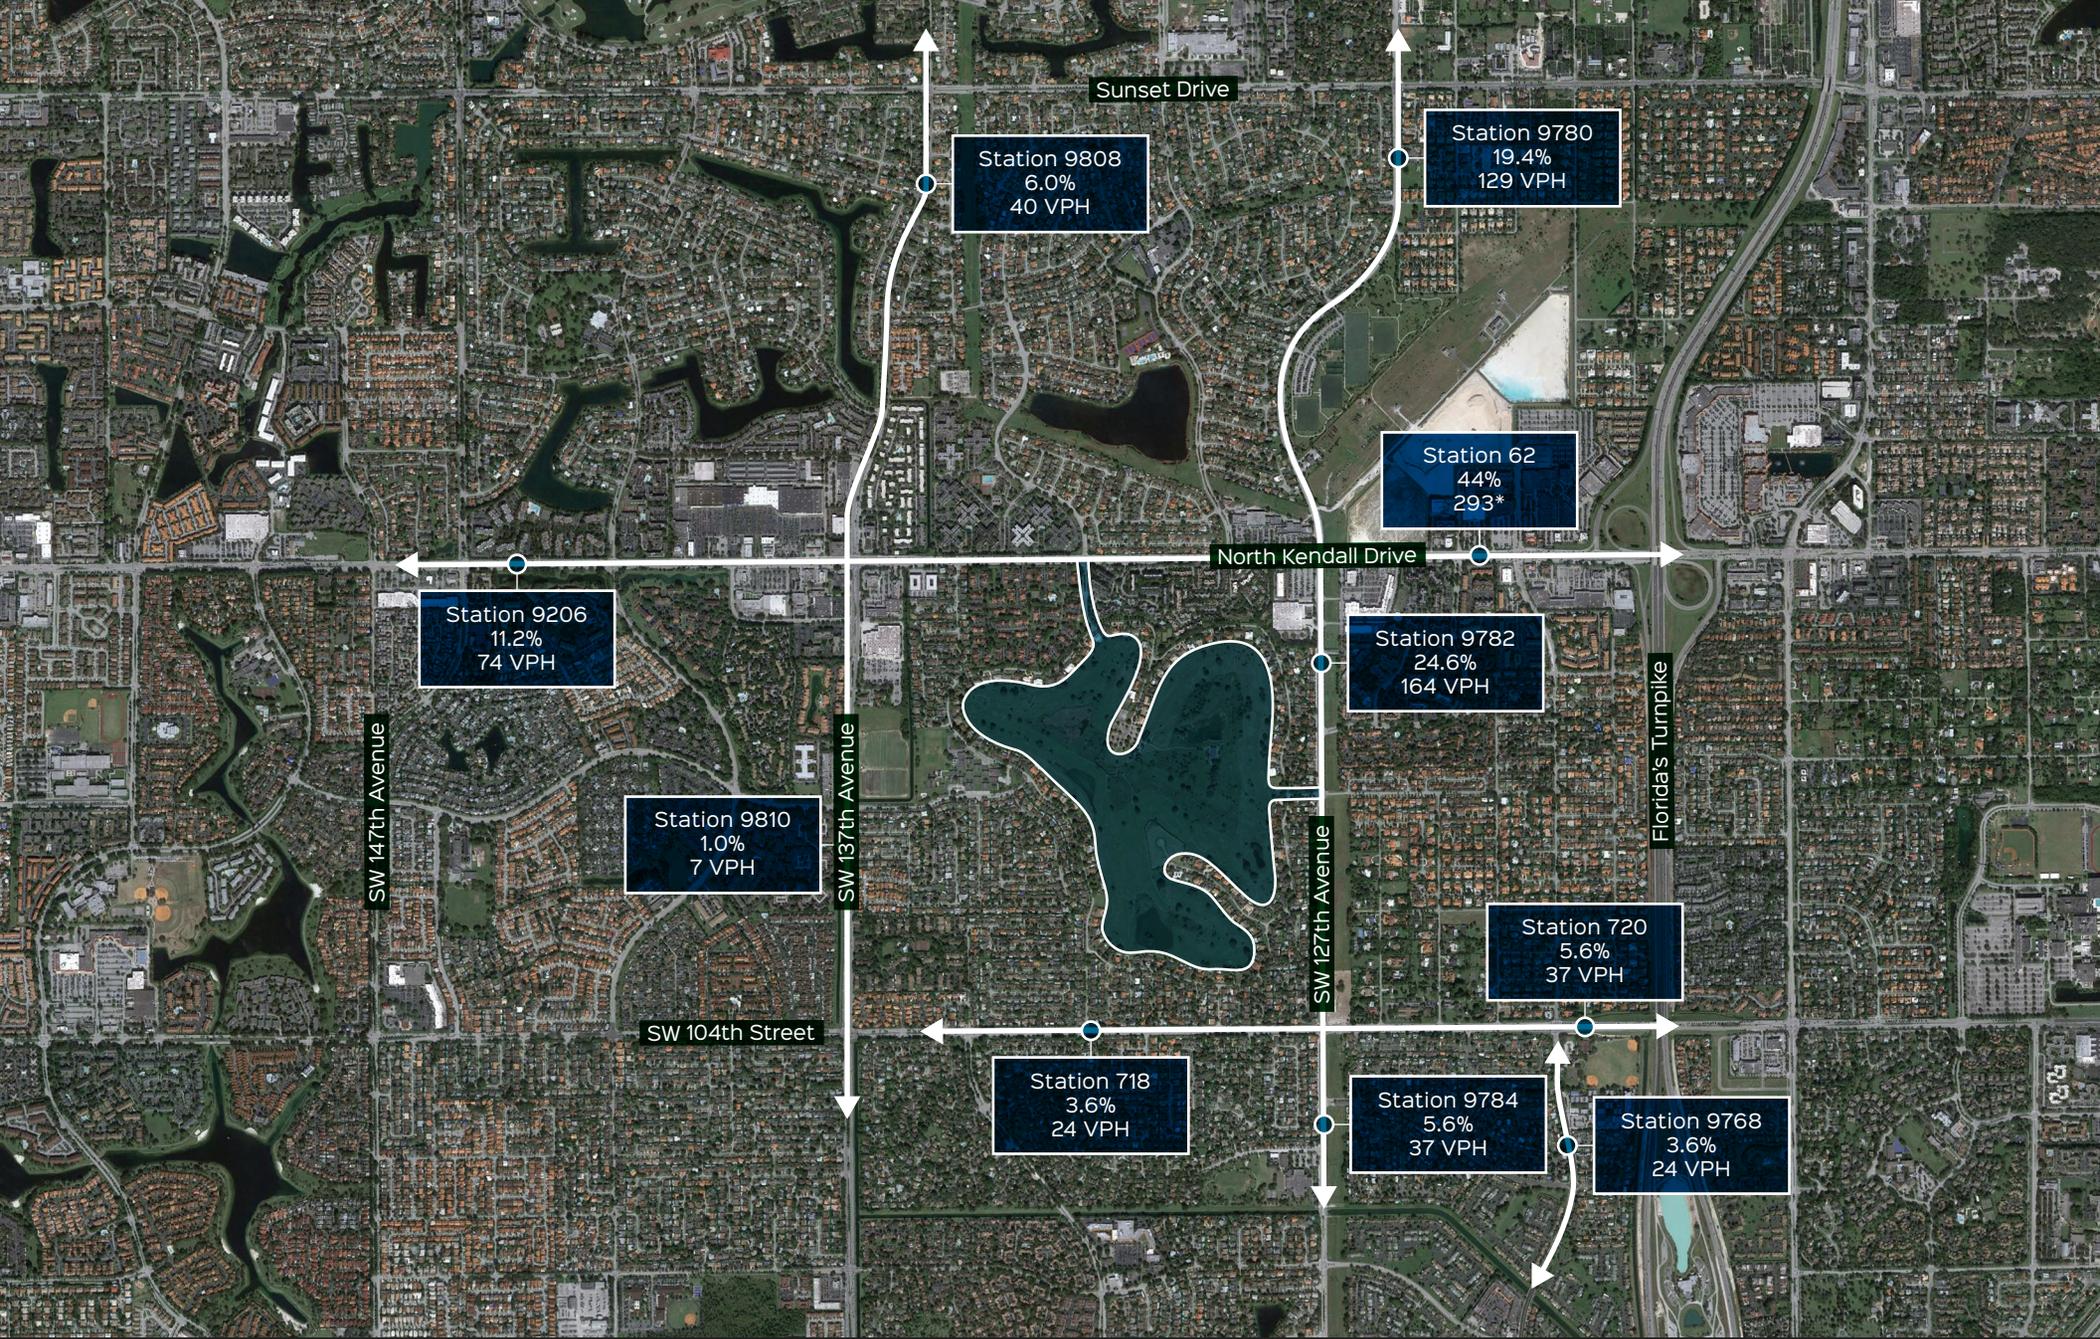

3.5 Future Short Term (2019) Conditions

The concurrency analysis was performed for the first directly accessed existing concurrency station as established by MDC Office of Concurrency Management. The analysis was performed for peak period conditions and includes existing traffic volumes, traffic associated with approved developments, and project traffic. The MDC Concurrency database is for the PM peak period as it represents the worst case scenario since existing traffic volumes tend to be higher and trip generation for the Project is also higher. Year 2019 PM peak period analysis was performed for all the stations.

Traffic data for the roadways analyzed, (including Level of Service (LOS) standard, Service Volume (SV), Existing Counts and Committed Development Trips) was obtained from the MDC concurrency database included in Appendix G. Count stations updated in years prior to 2016 were update using the background growth rate for the study area. Project traffic was distributed based on the cardinal distribution in Exhibit 5 and graphically portrayed in Exhibit 6. The resulting trip distribution and assignment are graphically portrayed in Exhibit 7. The resulting analysis is provided in Exhibit 8. The analysis shows that all roadway segments will operate within the adopted level of service standards with the addition of project traffic.

3.6 Future Long Term (2028) Conditions

The future Long Term (2028) analysis was performed for roadway segments adjacent to and/or in the vicinity of the project and on roadways where project traffic is deemed significant. Significant impact is defined as project traffic representing 5% or more of the corresponding service volume for each roadway segment. The project distribution for the extended study area, based on the cardinal distribution, is presented in Exhibit 9. Roadway segment analysis was performed for peak period conditions and includes existing traffic volumes, future background growth, traffic associated with approved developments and project traffic. PM peak period analysis was performed for all the analyzed roadways. The analysis is presented in Exhibit 10.

* Project trips assigned to this station also use station 9782, SW 127th Avenue south of SW 88th Street to SW 104th Street resulting in some double counting.

The analysis indicates that in the year 2028, all roadway segments analyzed will operate within the adopted level of service standards.

4.0 CONCLUSIONS

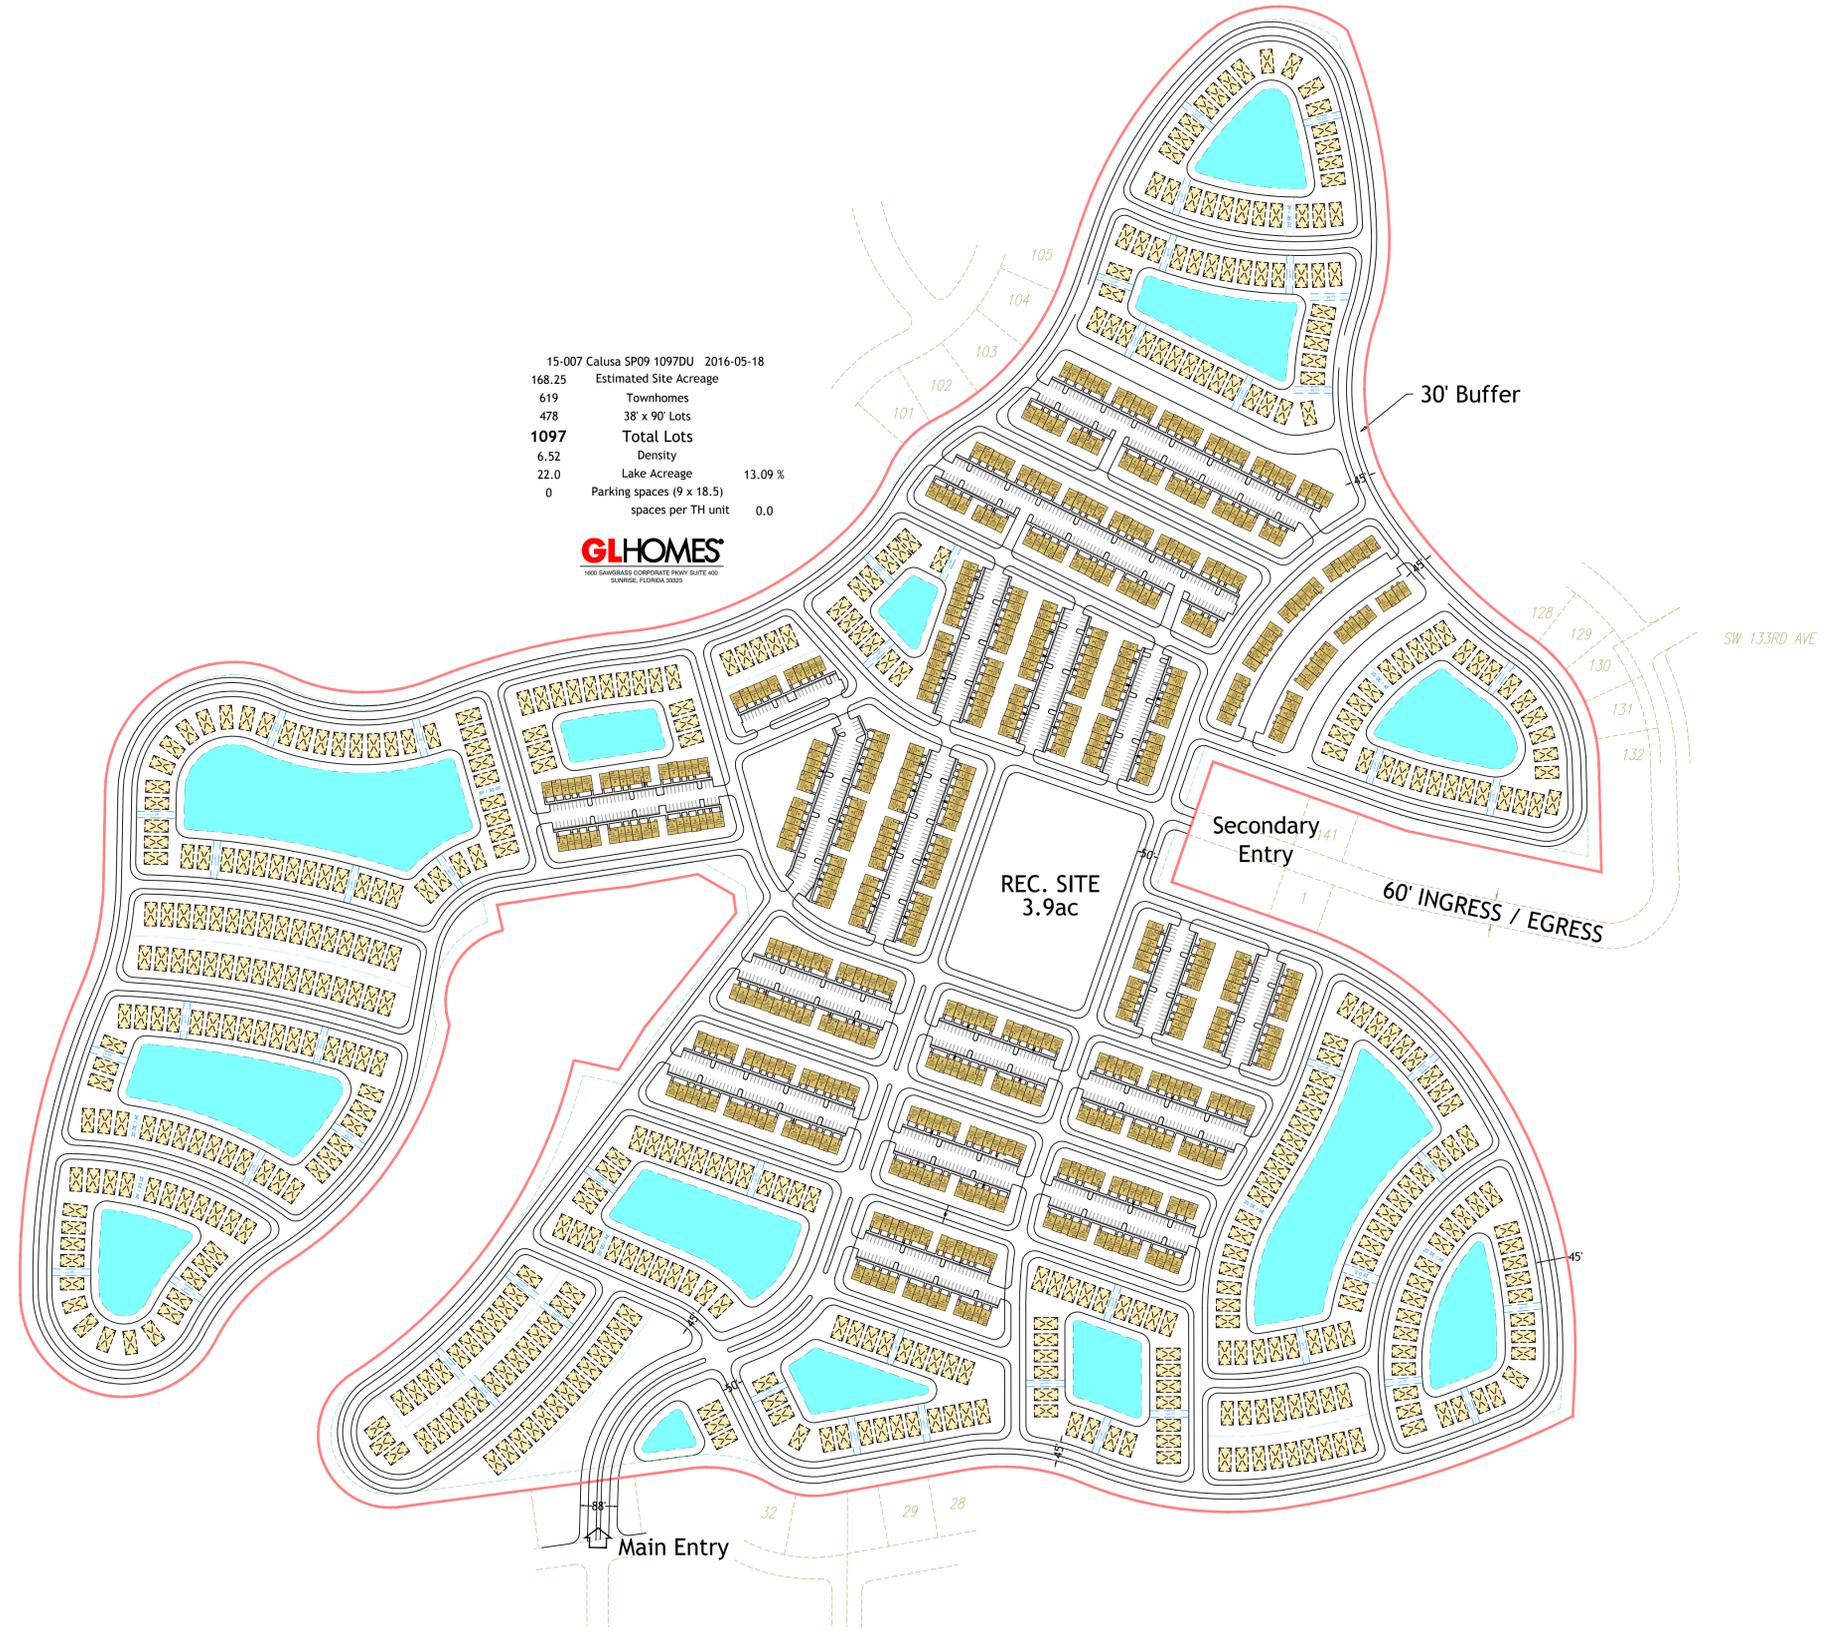

The short term portion of this traffic study was conducted based on the MDC established methodology currently used for the roadway concurrency management analysis. Future conditions with the project are presented. The analysis was performed using the most recent concurrency stations published by Miami-Dade County Transportation and Public Works. The long term portion of the study was conducted based on the document titled Instructions for Preparing Applications Requesting Amendment to the Miami-Dade County Comprehensive Development Master plan May 2016-17 Amendment Cycle published by MDC.

The analysis indicates that all roadways segment analyzed for existing (2016) conditions, short term (2019) conditions, and long term (2028) conditions are projected to operate within the MDC adopted level of service standards.

Appendix D

Transit Use & Census Data

S0801

COMMUTING CHARACTERISTICS BY SEX

2013 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

In data year 2013, there were a series of changes to data collection operations that could have affected some estimates. These changes include the addition of Internet as a mode of data collection, the end of the content portion of Failed Edit Follow-Up interviewing, and the loss of one monthly panel due to the Federal Government shut down in October 2013. For more information, see: User Notes

The 12 selected states are Connecticut, Maine, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Wisconsin.

Workers include members of the Armed Forces and civilians who were at work last week.

While the 2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

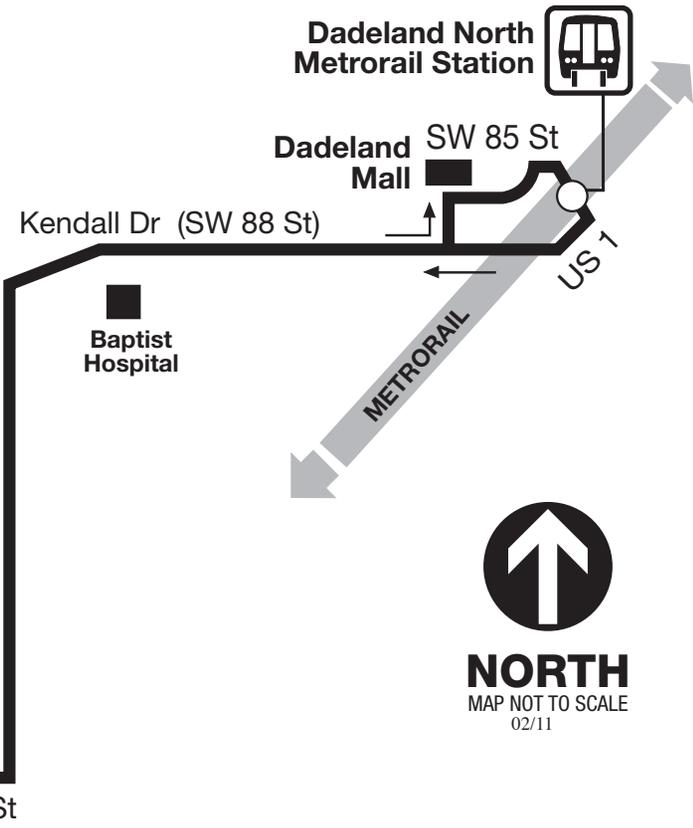

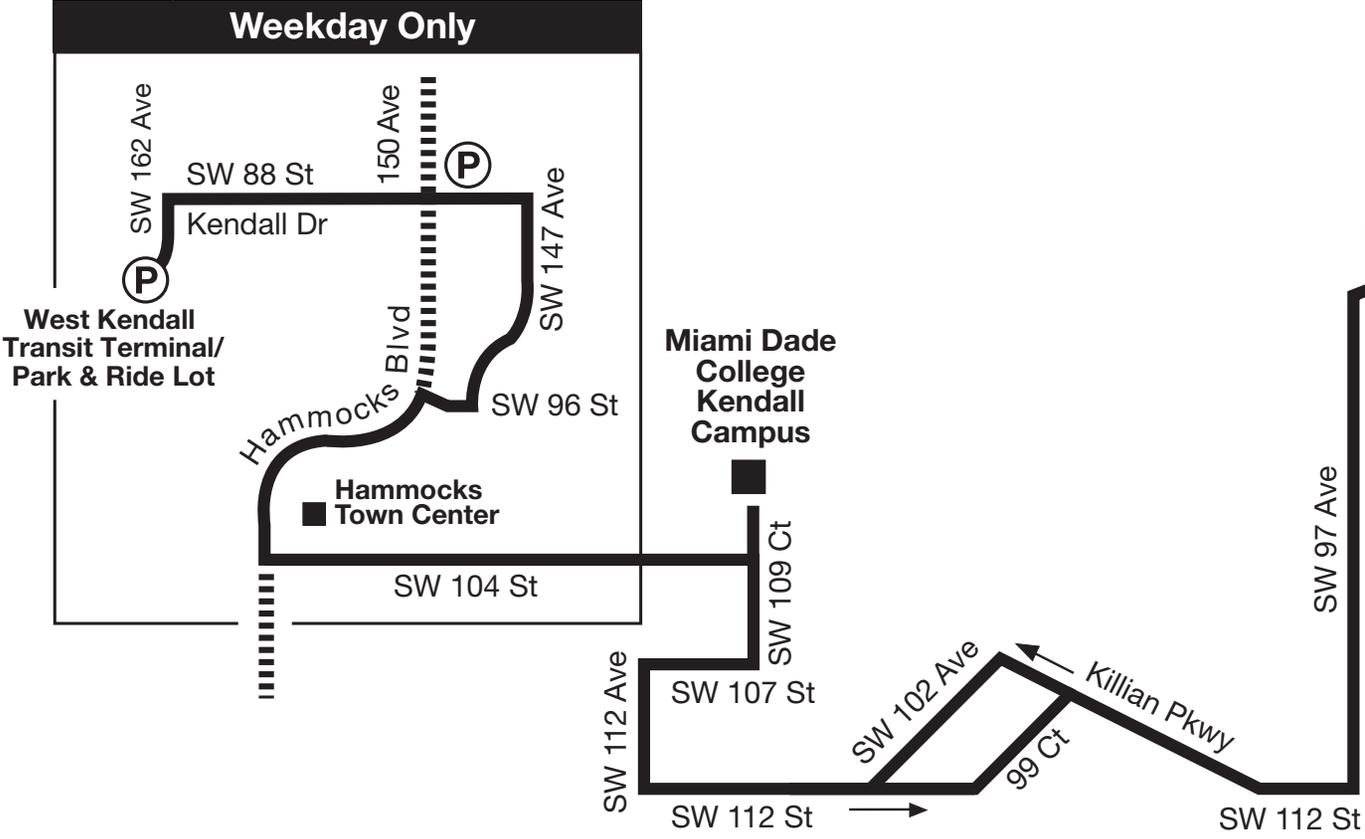

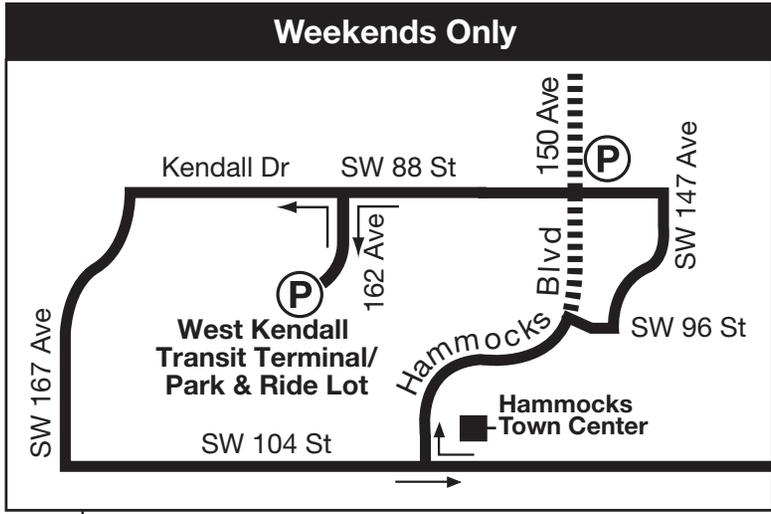

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2013 American Community Survey

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

EE = 120% of LOS E, Extraordinary Transit between Infill Area and Urban Development Boundary

HE = LOS E, 20 Minutes Headway between Infill Area and Urban Development Boundary

E+50 = 150% of LOS E, Extraordinary Transit in Infill Area

E+20 = 120% of LOS E, 20 Minutes Transit Headway in Infill Area

SUMA = State Urban Minor Arterial between Infill Area and Urban Development Boundary

CL = Road Classification and No. Lanes; A = Arterial C = Collector; - = Negative Number
