Comments:	Pursuant to Section 2-8.10 of the Code of Miami-Dade County, this Contract is subject to a user access fee under the County's User Access Program (UAP) in the amount of two percent (2%). All construction services provided under this contract are subject to the 2% UAP. This fee applies to all Contract usage whether by County Departments or by any other governmental, quasi-governmental or not-for-profit entity. From every payment made to the Contractor under this contract (including the payment of retainage), the County will deduct the two percent (2%) UAP fee provided in the ordinance and the Contractor will accept such reduced amount as full compensation for any and all deliverables under the contract. The County shall retain the 2% UAP for use by the County to help defray the cost of its procurement program. Contractor participation in this pay request reduction portion of the UAP is mandatory. Provided, however, UAP shall not be applicable for total contract values, inclusive of contingency and allowance accounts, of less than five hundred thousand dollars (\$500,000.00). PROJECT BACKGROUND: The Miami-Dade South Dade Transitway is a 20-mile Bus Rapid Transit (BRT) system that serves as a core component of the County's Strategic Miami Area Rapid Transit (SMART) Plan. The corridor runs from the Dadeland South Metrorail station in the north to the SW 344th Street Park-and-Ride/Transit Terminal in Florida City. This system transforms a dedicated busway into a high-efficiency transit line designed to provide a rail-like experience. Key features include: 1) Dedicated Right-of-Way: Exclusive lanes along the U.S. Route 1 corridor. 2) Advanced Technology: Traffic signal preemption (TSP) at 46 intersections. 3) Safety Features: Rail-style gate arms at intersections. 4) Modern Stations: 14 signature BRT stations with climate-controlled areas, Wi-Fi, CCTV, and level boarding platforms. 5) All-Electric Fleet: The nation's longest battery-electric BRT system on a dedicated corridor. 6) Future Proofing: Designed for full convertibility to heavy rail transit (Metrorail). Fiber Optic Cable Infrastructure The fiber optic network serves as the "digital backbone" enabling seamless communication across all stations, intersections, and central control centers. 1) Cable Type: Single-mode fiber optic cable, optimized for high-bandwidth, long-distance transmission with minimal signal loss. 2) Installation Method: Installed underground within a conduit system (raceway with four conduits) for maximum protection and reliability. 3) Network Configuration: Robust architecture with lateral connections to 14 stations and 46 signal locations, designed to remain operational even if a single station connection is down. 4) Purpose: Supports Traffic Signal Preemption (TSP), real-time bus tracking, security/CCTV, station Wi-Fi, and communication with central data centers LOCATION OF WORK: ☐ Dadeland South Metrorail Station ☐ SW 104 St Station ☐ Howard Dr Station ☐ Coral Reef Dr Station ☐ Richmond Dr Station
