BMO Capital Markets is a brand name under which BMO, BMO Harris Bank N.A. & BMO Capital Markets Corp. operate in the U.S.

BMO Capital Markets delivers product breadth and proven execution capabilities to our infrastructure clients

Why Governments Use P3 Methods

Four Main Benefits of P3

Risk Transfer

- Ability to transfer key risks to the private sector owner/operator
 - Revenue/demand risk
 - Construction risk
 - Technology and performance risk
 - Operating and maintenance risk
 - Lifecycle/capital reinvestment risk

Additional Resources

- P3 projects maximize the capital proceeds which can be raised against infrastructure asset
 - Access to debt and equity capital
 - Competitive bid process ensures most attractive valuation
 - Leasing of existing assets often bring large upfront sums
 - Brings outside personnel to supplement agency staff

Private Sector Expertise

- Access to top international best practices in private sector
 - New technologies
 - Innovative management techniques
 - Cost innovation in lifecycle/rehabilitation planning
 - Innovative designs to reduce cost and enhance performance

Timing & Certainty of Delivery

- P3 structures can accelerate the delivery of the asset by years
 - Private firms often submit multiple design alternatives to speed permitting and construction timeline
 - Construction price is fixed at financial close
 - Delays past the guaranteed delivery date result in liquidated damages paid per day to the procuring authority

Risk transfer, accelerating delivery and tapping equity capital for infrastructure are drivers of P3 rationale

Spectrum of P3 | Private Procurement Options for New Assets

Alternative Description **Key Elements** 0% Construction elements incorporated into design by Government contracts for the design and construction of professionals that actually build reducing change orders assets directly Design - Build Some elements are more efficiently finalized in f ield Mix of interim and completion payments during construction, including compressed schedule Government to manage and operate assets Same entity designs and builds, eliminating finger pointing experienced in DBB Adds an operating contract with Private sector for In addition to DB benefits: operating the assets post construction Design - Build w/ O&M elements incorporated into design by professionals with experience reducing O&M and R&R Often operating contract includes a payment penalty **Operating Contract** Risk Transfer to Private Sector mechanism to ensure performance Bid can be based on lowest lifecycle rather than just construction price Operator can provide international best practices Private Financing Required Government contracts with Private Developer to deliver In addition to DBO benefits: newly constructed assets Additional diligence by debt investors and at risk-capital Design - Build - Finance Payment at completion or paid over time as lease provides certainty Government to manage and operate assets · Gap financing enables private funds to advance/expedite project Concession (or Lease) Model – Standard P3 Procurement Government contracts with Private Developer to deliver In addition to DBO benefits: newly constructed assets and operate under a long-term Additional diligence by debt investors and at-risk capital "concession" agreement provides certainty Design - Build - Finance -· Government can (a) pay fixed "availability payments" Operate ("DBFO") quarterly or (b) grant rights to the Private Developer to Equity at-risk capital provides additional diligence, collect fees or tolls international asset management expertise, and incentives for a better performing asset • 30 to 99 year operating period post-construction Government sells or leases constructed assets to Basically the same as DBFO Asset Sale / Full Private sector **Privatization** · Government may retain some monitoring and 100% enforcement rights

States with P3 Authorization

28 U.S. States and 1 U.S. territory that have enacted statutes that enable the use of various P3 approaches for the private development of infrastructure

Concession Requirements & Debt Market Views

Recent Trends

- More demand than supply of infrastructure transactions are directing trends in the debt markets
 - More competitive terms
 - Markets willing to do work to learn new credits structures
- Equity sponsor requirements are increasing in competitive processes
 - Spreads tightening in bank and bond markets
 - Recent deals are pricing inside 200 bps
 - Financial covenants are loosening slightly
 - Coverage ratio
 - Debt service reserve requirements
 - Design-builder security package requirements
- Bank structure are increasingly creative to be part of transaction
- Bond markets are increasingly accepting of new sectors and asset types, as well as greenfield risk
- Both bank and bond markets have experience with TIFIA
- Both bank and bond markets have experience with availability payment deals and traffic revenue deals
- Both bank and bond markets have experience with governmental appropriation credits

Recent trends demonstrate a dynamic and sophisticated debt investor base

Relevant DBOMF Transactions

Presidio Parkway

Authority: Caltrans
