## EXECUTIVE SUMMARY

The following scorecard paints a mixed picture of the Black Community of Miami-Dade County as defined by the majority-Black Targeted Urban Areas (TUAs). Across the board and within specific areas, much progress has been made since the previous scorecard. However, there are also many areas where improvement has been lacking. Also, there are areas that have shown improvement but trail the rate of improvement seen in the rest of the county leading to greater inequality. The “rest of the county” as used below refers to the entire county minus all the seventeen TUA areas. The following provides a summary of the findings which can be found in the pages that follow.

### Jobs/Economic Development

**Income and Poverty:** Typical household incomes in eight of the nine TUAs were well below the rest of the county. The average TUA median was just 60.5% of the area outside, \$40,860 compared to \$67,516 in 2022. The exception was Richmond Heights with a median slightly above the rest of the county. Six of the nine TUAs saw typical household incomes grow faster than incomes in the rest of the county. The three exceptions were Florida City, Little Haiti, and Richmond Heights. Richmond Heights, however, was the only TUA with a median household income higher than the rest of the county in both periods.

Seven of nine of the TUAs experienced a drop in the poverty rate between 2017 and 2022. Florida City saw the poverty rate increase 2.1% to exceed 50%. Richmond Heights also saw an increase in the poverty rate, by 0.8 %, to 11.2%, but remained below the average poverty rate in the rest of the county of 14% in 2022. The average poverty rate across all the TUAs was 27.2% in 2022.

**Employment, Unemployment and Labor Force Participation:** The average unemployment rate in the TUAs declined far more than in the rest of the county, 7.2% compared to 2.5%, yet remained nearly double the rate in the rest of the county, 7.9% compared to 4.2%. Every TUA saw a fall in the unemployment rate between 2017 and 2022, ranging from 0.2% in Richmond Heights to 10.9% in Model City/Brownsville. The 2022 unemployment rate itself was higher in every TUA than the rest of the county, ranging from a low of 5.2% in Opa-Locka to a high of 24.9% in Florida City.

**Transportation and Commuting:** Countywide, 81.5% of workers commuted by car, truck, or van in 2022. Six of the nine TUAs were more dependent on personal vehicles than the countywide average, with the average across the TUAs at 83 percent commuting by car, truck, or van. Use of public transportation by commuters in the TUAs fell 33% between 2017 and 2022 compared to 32% in the rest of the county, averaging 6.9% across the TUAs. The average commute time in the TUAs was 24.9 minutes, less than the countywide average of 26 minutes. All the TUAs saw commute times fall, with the time savings across the different TUAs ranging from 3 to 14 minutes per trip.

**Business Activity:** The TUAs saw the addition of 3,603 businesses between 2017 and 2022. This represents an increase of 73.1% over the period. Retail and personal services accounted for nearly one-third of all business establishments in 2022. The fastest-growing sector was the “unclassified” businesses which may represent the on-demand businesses such as Uber, Lyft, Door Dash, and similar activities.

**Healthcare:** The average share of the population with health insurance in the TUAs increased between 2017 and 2022 from 75.9% to 79.5%. This TUA average still trailed the rest of the county with 85.6% of the population covered. Worse, this gap in the coverage rate between the rest of the county and the

TUAs widened over the period from 3.8% in 2017 to 6.1% in 2022. For children under 19-years of age, the picture was a little better, with an average of 93.2% covered by health insurance in 2022. This rate was higher than the 2022 coverage rate in the rest of the county of 92.9%. And the TUA rate represented an increase from 91.5% of children covered in 2017.

**Crime Reports:** Crime reports and arrests were significantly higher in the TUAs than in the rest of the county. The combined 2022 crime rate in the TUAs was 75 crimes reported per 1,000 persons compared to 27.8 reported crimes per 1,000 in the rest of the county. Arrests per 1,000 in the TUAs was 12.2 in 2022 compared to 7.4 per 1,000 in the rest of the county. For those with data available, the number of crimes reported and the rate per 1,000 residents fell in every TUA between 2017 and 2022. There was no 2017 data available for Carol City. However, in the combined TUAs, the reported crimes fell 16.4%, while in the rest of the county, reported crimes fell 33.1%.

## Housing

**Home Ownership:** The combined home-ownership rate in the TUAs in 2017 among all households regardless of the race or ethnicity of the household was 36.6%. By 2022, this all-household ownership rate had increased slightly to 36.8%. For the rest of the county, the ownership rate among all households fell between 2017 and 2022 from 53.8% to 53.5%.

The home-ownership pattern specifically for Black households in the TUAs in 2022 was 35.6%, up from 33.9% in 2017. However, the 2022 Black-household ownership rate in the TUAs was well below the rest of the county, where it stood at 48.7%.

**Home and Rent Values:** The weighted average of the owner-occupied home value in the TUAs increased 66.6% between 2017 and 2022 from \$170,536 to \$284,030 in 2022 inflation-adjusted dollars. Owner-occupied home values in the rest of the county increased 23.4% over the same period from \$319,082 to \$393,840 in 2022 dollars.

The median gross rent, weighted and averaged across all the TUAs rose 8.1% between 2017 and 2022, after adjusting for inflation. The 2017 median gross rent was \$1,100 in the TUAs, increasing to \$1,189 in 2022. In the rest of the county, median gross rents grew 9.5% between 2017 and 2022 from an inflation adjusted \$1,540 to \$1,686.

**Housing Affordability:** Among homeowner-households, the average share of TUA households that were cost-burdened rose 0.5% between 2017 and 2022 from 34% to 34.5%. The share in the rest of the county, however, fell 2.2% over that period, from 37.5% to 35.2%. The average share of severely-cost-burdened homeowner households in TUAs rose 1% from 2017 to 2022 from 16.9% to 17.9%. This compares to a decline of 2.4% in the rest of the county, from 36.2% to 33.8% of households severely cost burdened.

**Housing Vacancy:** Between 2017 and 2022, the combined total vacancy rate in the TUAs dropped from 13% to 9.5% of all units. In comparison, in the rest of the county, the rate dropped from 15.1% to 11.6% over the same period. In the TUAs, the share of vacant units for rent fell from 40.4% of the total to 27.7%, while in the rest of the county, the vacant-for-rent share increased from 21.5% to 24.4%. The share of vacant for-sale units in the TUAs dropped from 11.5% in 2017 to 10.7% in 2022, versus 10.1% and 9.6%, respectively, in the rest of the county. In the TUAs, the share of “other” units grew from

48.1% of the total vacant units in 2017, to 61.6% in 2022. Many of these “other” units may very well be short term rentals and thus not available to residents of the TUAs or the rest of the county.

## **Education**

**Educational Attainment:** Educational attainment by adults, aged 25 years or older, achieving at least a high school diploma increased in the combined TUAs between 2017 and 2022, from 71.8% to 73.9%. In comparison, the rate in the rest of the county increased from 81.8% in 2017 to 83.5% in 2022.

**College Enrollment (Young Adults):** Overall, the college enrollment rate of young adults aged 18 to 24 in the combined TUAs in 2022 of 49.5% was much lower than the non-TUA areas in Miami-Dade County which was 70.1%. Between 2017 and 2022, enrollment of young adults in the combined TUAs decreased 1.4% from 50.9%. Over the same period, for the non-TUA areas in Miami-Dade County, college enrollment among those 18-to-24 years old decreased by more, 3.8%, from 73.9% to 70.1%.

**High School Graduation/Retention Rates:** On average, the TUAs saw an improvement of 15.4% over the five years to an average graduation rate of 93.9%. Countywide, graduation rates improved 9.7% over the same period to 90.3%. Conversely, the average high school dropout rate for all TUAs improved from 7.1% in 2017 to 2.3% in 2022. Countywide, the dropout rate also decreased over that period from 5.7% in 2017 to 2.7% in 2022.

## I. INTRODUCTION

The *2024 Scorecard for Miami-Dade County's Targeted Urban Areas* has been prepared at the request of the Miami-Dade Economic Advocacy Trust (MDEAT) by the Planning Research and Economic Analysis Section of the county's Regulatory and Economic Resources Department. This scorecard is produced pursuant to Miami-Dade County ordinance requiring the submission of a report card to the Board of County Commissioners on "the State of the Black Community in Miami-Dade County."

The following factors are included in this scorecard as requested by the Board: economic conditions including employment and unemployment, income and poverty, business activity and crime; educational characteristics including public school outcomes, college enrollment and educational attainment; and housing characteristics including home ownership, home values and housing affordability. The following is not intended as an analysis of the dynamics of these factors, but rather, as a point-in-time measurement and snapshot of recent trends of the most salient factors.

In the 1990s, as a response to conditions prevailing at the time, the Targeted Urban Areas (TUAs) were created to focus resources in the most vulnerable areas of the county with predominantly Black populations. Seventeen neighborhood areas were identified. These were:

- |                                 |                            |
|---------------------------------|----------------------------|
| ▪ <b>Carol City</b>             | ▪ <b>Opa-Locka</b>         |
| ▪ <b>Coconut Grove</b>          | ▪ <b>Overtown</b>          |
| ▪ <b>Florida City</b>           | ▪ <b>Perrine</b>           |
| ▪ <b>Goulds</b>                 | ▪ <b>Princeton</b>         |
| ▪ <b>Leisure City</b>           | ▪ <b>Richmond Heights</b>  |
| ▪ <b>Liberty City</b>           | ▪ <b>South Miami</b>       |
| ▪ <b>Little Haiti</b>           | ▪ <b>SW Homestead</b>      |
| ▪ <b>Model City/Brownsville</b> | ▪ <b>West Little River</b> |
| ▪ <b>Naranja</b>                |                            |

Over the three decades since their creation, the TUAs have seen dramatic shifts in their populations. Despite the original intention, that was to target areas of vulnerable Black populations, many of the defined areas above are no longer predominantly Black. In fact, many are no longer even majority Black. Therefore, to comply with the ordinance requirement to provide a scorecard on the state of the Black community, the scorecards presented below will cover only those TUAs with a majority Black population. These nine TUAs and the share of the population that is Black are:

- |                                         |                                    |
|-----------------------------------------|------------------------------------|
| ▪ <b>Carol City (57.8%)</b>             | ▪ <b>Opa-Locka (51.7%)</b>         |
| ▪ <b>Florida City (63.9%)</b>           | ▪ <b>Perrine (57.3%)</b>           |
| ▪ <b>Liberty City (56.8%)</b>           | ▪ <b>Richmond Heights (51.1%)</b>  |
| ▪ <b>Little Haiti (62.3%)</b>           | ▪ <b>West Little River (52.6%)</b> |
| ▪ <b>Model City/Brownsville (56.5%)</b> |                                    |

The eight TUAs that were not majority Black according to the most recent American Community Survey are included in the appendix with the scorecard and socioeconomic profiles.

The data for the scorecards and profiles came from a variety of public and private sources. First among these was the U.S. Census Bureau American Community Survey 5-year estimates for the years 2012 and 2017, providing 10 years of data from two non-overlapping 5-year periods to evaluate trends.

Data was also drawn from the Census Bureau Longitudinal Employer-Household Dynamics program which matches residents in the TUAs with their place of work. This dataset has also been known as the Journey-to-Work data or Origin-Destination data. School performance data for public schools serving the students living in TUAs came from the Miami-Dade Public School's Assessment, Research, and Data Analysis (ARDA) Division. Business establishment data came from private vendor, DataAxle (formerly InfoUSA). Crime data was obtained for 2017 and 2022 from the various Law Enforcement agencies with jurisdiction over each of the TUAs. They include Miami-Dade County, Miami Gardens, City of Miami, Coral Gables, Florida City, Opa-Locka, South Miami, and Homestead.

Finally, this report presents various options and opportunities that are intended to assist MDEAT staff along with county policymakers in general with focusing on the needs of the population addressed in the following scorecards.

The remainder of this report is divided into the following sections: Section II through IV provide a summary of observations, broken down into Jobs/Economic Development, Housing and Education, respectively. Section V presents general opportunities and specific strategies for each of the focus areas, economics, housing and education. There are also two strategies for the general scorecard process. Section VI provides the actual scorecards in infographic form for a quick one-page summary of performance for each of the TUAs. In the Appendix, can be found maps, scorecards, scorecard comparative ratios, and socioeconomic infographics and tables for all 17 of the TUAs.

## II. OBSERVATION SUMMARY – JOBS/ECONOMIC DEVELOPMENT

### Income and Poverty

Figure 1 shows median household incomes and the change between 2017 and 2022. The median household income grew in eight of the nine TUAs, from an overall average of \$35,257 in 2017 (2022 Dollars) to \$40,860 in 2022. The greatest growth occurred in Opa-Locka, up 52.4% to \$30,101 from the level in 2017. Despite this growth, Opa-Locka remained the second lowest median household income among the TUAs in 2022. The only TUA to see a decrease was Florida City at 14.9%. Florida City ranked as the lowest among the TUAs with a 2022 median household income of \$25,547. The median household income was \$75,149 in the United States, \$67,917 in Florida, and \$64,215 in Miami-Dade County.

Figure 1: 2022 Median Household Incomes and how they changed between 2017 and 2022 in TUAs

The average of median household incomes in four TUAs had a gap with respect to the countywide median in 2022 greater than 50%. This means the median household income there was less than half the median in the rest of the county. These included Florida City with a gap of 62.2%, Opa-Locka with a gap of 55.4%, Little Haiti with a gap of 50.6%, and Liberty City with a gap of 50.5%. For all the TUAs in 2022, the median household income was just 60.5% of the median in the rest of the county. This ratio rose from an average of 59.6% in 2017. This ratio rose in six of the nine TUAs between 2017 and 2022. Therefore, a majority of TUAs experienced household income growth, and most also saw incomes grow faster than in the rest of the county. The exceptions were Florida City where the ratio of TUA income to income in the rest of the county fell from 50.7% to 37.8% and Little Haiti with a decrease from 50.1% to 49.4%. Also, Richmond Heights, with a median household income greater than the rest of the county, saw a decrease in the ratio from 112.7% to 101.4% of the rest of the county's median household income. Figure 2 on the next page shows the gaps between the TUA incomes and the rest of the county. The three TUAs that experienced the greatest decrease in the gap included Opa-Locka, with a decrease of 11.2%, Carol City with a decrease of 9.9%, and Model City/Brownsville, with a decrease of 8.5%.

**Four TUAs had a gap of greater than 50%, meaning that the median household income there was less than half the median in the rest of the county.**

Figure 2: How did the median income in the TUAs compare to the rest of the County?

While the median household income provides a general impression of the financial health of an area's households, it does not consider the size of households across places. Per capita income is calculated by dividing the aggregate annual income of all households for which income is computed by the number of persons. For the TUAs in 2022, the average per capita income was \$20,328. This was just 59.7% of the per capita income in the rest of the county of \$34,030. The per capita income ranged from a low of \$10,410 in Florida City (just 31% of the per capita in the rest of the county) to a high of \$34,412 in Richmond Heights. If Richmond Height was dropped from the per capita average, it falls to just \$18,567 which is 54.6% of the rest of the county per capita.

Another key indicator to measure the economic wellbeing of a community is poverty rate and its change over time. Between 2017 and 2022, the poverty rate decreased from 14.6% to 12.6% in the US, from 15.5% to 12.7% in Florida, and 19.0% to 14.4% in Miami-Dade County. Poverty rates fell in seven of the

Figure 3: What were the Poverty Rates in the TUAs in 2017 and 2022

nine TUAs between 2017 and 2022 as shown in Figure 3. Yet only one, Richmond Heights (11.2%), remained below the rate in the rest of the county (14%). The two that saw the poverty rate increase included Richmond Heights, up 0.8%, and Florida City, up 2.1%. And Florida City had a poverty rate above 50%. Six of the remaining eight had poverty rates above 20%, defined as areas of concentrated poverty. The largest decrease in the poverty rate came in Perrine, down 24.1% over the five-year period. The average poverty rate across all the TUAs was 27.2% in 2022, almost double the rate in the rest of the county of 14.0%. However, the average rate in the TUAs fell slightly faster than the rest of the county, 8.8% versus 3.4%, slightly closing the poverty gap. Table 1 summarizes the income and poverty data.

Table 1: Summary of Income Statistics

	Median Household Income (2022 \$)			Per Capita Income (2022 \$)			Poverty Rate
	2022	2017	Percent Change	2022	2017	Percent Change	
Florida City	\$25,547	\$30,016	-14.9%	\$10,410	\$9,919	5.0%	50.4%
Opa-Locka	\$30,101	\$19,749	52.4%	\$18,108	\$13,157	37.6%	28.0%
Little Haiti	\$33,330	\$29,651	12.4%	\$20,681	\$18,261	13.3%	30.3%
Liberty City	\$33,448	\$28,819	16.1%	\$17,887	\$16,468	8.6%	32.7%
Model City / Brownsville	\$39,811	\$29,856	33.3%	\$18,046	\$14,785	22.1%	30.8%
Perrine	\$42,961	\$37,105	15.8%	\$18,897	\$12,532	50.8%	21.7%
West Little River	\$46,011	\$39,082	17.7%	\$20,337	\$18,270	11.3%	22.2%
Carol City	\$48,083	\$36,324	32.4%	\$24,173	\$16,961	42.5%	17.7%
Richmond Heights	\$68,444	\$66,715	2.6%	\$34,412	\$27,088	27.0%	11.2%
TUA Average	\$40,860	\$35,257	15.9%	\$20,328	\$16,382	24.1%	27.2%
Remainder	\$67,516	\$59,205	14.0%	\$34,030	\$32,253	5.5%	14.0%
Miami-Dade	\$64,387	\$56,367	14.2%	\$33,331	\$30,928	7.8%	15.3%

## Employment/Unemployment/Labor Force Participation

Between 2017 and 2022, the unemployment rate fell 1.1% (from 6.6% to 5.3%) in the US, and 2.2% (from 7.2% to 5.0%) in Florida. The unemployment rate also declined in all nine of the TUAs, and in most, by a sizable amount between the 2017 and 2022 shown in Figure 4. However, the unemployment rate in the TUAs, as shown in Figure 5, remains much higher than in the rest of the county. The 2022 rate for the combined TUAs was 7.9%, almost double the rate in the rest of the county, where the rate was 4.2%. The average unemployment rate in the TUAs declined by 7.2%, far more than the decline in the rest of the county of 2.5%. The greatest decline was 10.9% in Model City/Brownsville, followed by 7.8% in Opa-Locka, 7.3% in Little Haiti, 7.2% in Carol City.

***The average unemployment rate in the TUAs declined by 7.2%, far more than the decline in the rest of the county of 2.5%.***

The rates in the individual TUAs ranged from a low of 5.2% in Opa-Locka to the high of 24.9% in Florida City. Eight of the nine TUAs, the exception being Opa-Locka, had an unemployment rate that was at least 1.5 times higher than the rate in the rest of the county.

Figure 4: What Happened to the Unemployment Rate between 2017 and 2022?

Figure 5: What were the Actual Unemployment Rates in the TUAs?

As seen in Figure 6, the labor force participation rate in the combined TUAs, 57.2% in 2022, increased 0.1% from 2017, versus an increase of 1.8% in the rest of the County where it stood at 64.3%. The participation rate increased in four of the nine TUAs, with the greatest increase being in Perrine, at 10.7% and then Opa-Locka at 7.7%. The largest decrease in labor force participation was in Florida City at 19.4%, followed by Carol City at 8.9%.

Figure 6: How did the Labor Force Participation change in the TUAs between 2017 and 2022?

## Transportation and Commuting Patterns

### Transportation Mode

There were 1,319,578 workers in Miami-Dade County in 2022 and 81.5% commuted by car, truck, or van, 3.4% of them commuted by public transportation, 1.9% of them walked, 10.4% worked at home, and 2.8% used other means, such as a bicycle or a motorcycle. Six of the nine TUAs had a larger share of workers than the county's average that commuted by car, truck, or van in 2022. The three exceptions were Liberty City at 75.0%; Little Haiti at 69.0%; and Opa-Locka at 81.1%. Figure 7 summarizes the means-of-transportation data for commuters in all the TUAs.

Figure 7: How Did TUA Workers Get to Work in 2017 and 2022?

In 2022, there were 44,468 workers who commuted by public transportation in Miami-Dade County, a decrease of 32% from 65,521 in 2017. Most of the TUAs also had a decrease in the number of public-transportation commuters as shown in Figure 8. The one exception was the Opa-Locka TUA, which saw public transportation use increase by 54%. However, almost every TUA saw a larger share of transit riders in 2022 than the County average of 3.4%, the exception being Richmond Heights. Liberty City had the largest share at 14.1%, followed by Little Haiti (12.3%) and Model City/Brownsville (7.7%). Four TUAs had

more than 1,000 transit riders in 2022, led by Little Haiti (1,703) followed by Liberty City (1,335), West Little River (1,060), and Model City/Brownsville (1,008).

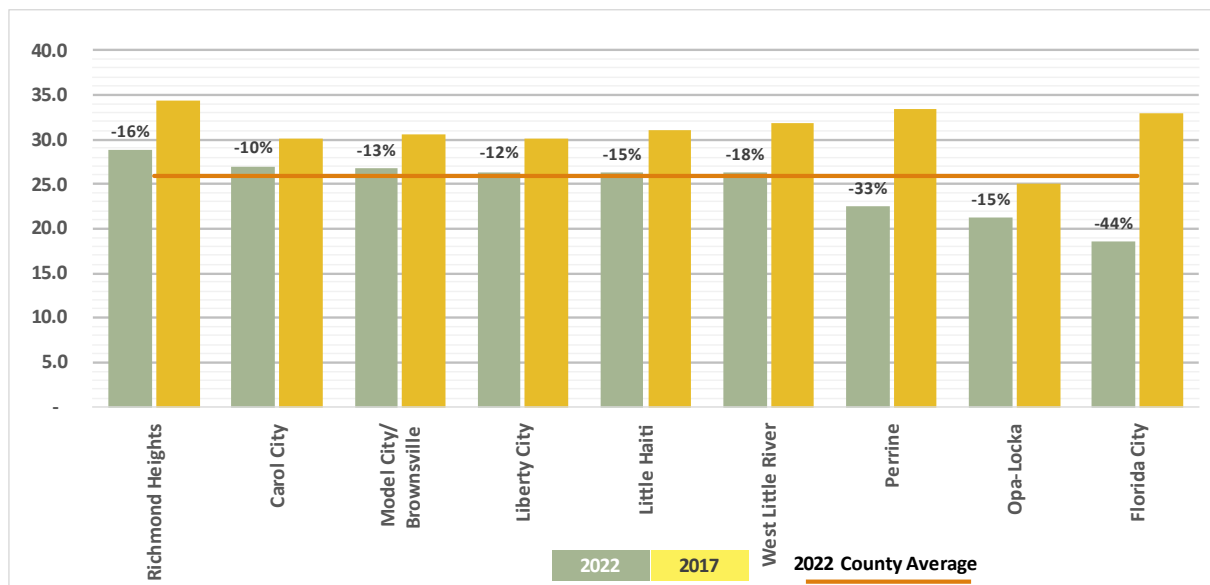

Figure 8: Public Transit Commuters and the 2017 to 2022 Percent Increase

#### Median Travel Time

Perhaps the greatest impediment to full participation in economic activity is efficient access to employment centers. The median commute time for Miami-Dade County residents was 26.0 minutes in 2022, a decrease of 15.8% from 30.8 minutes in 2017. These estimates, shown in Figure 9, represent the average commuting time over the five-year survey periods.

Figure 9: How long did Workers take to commute in 2017 and 2022?

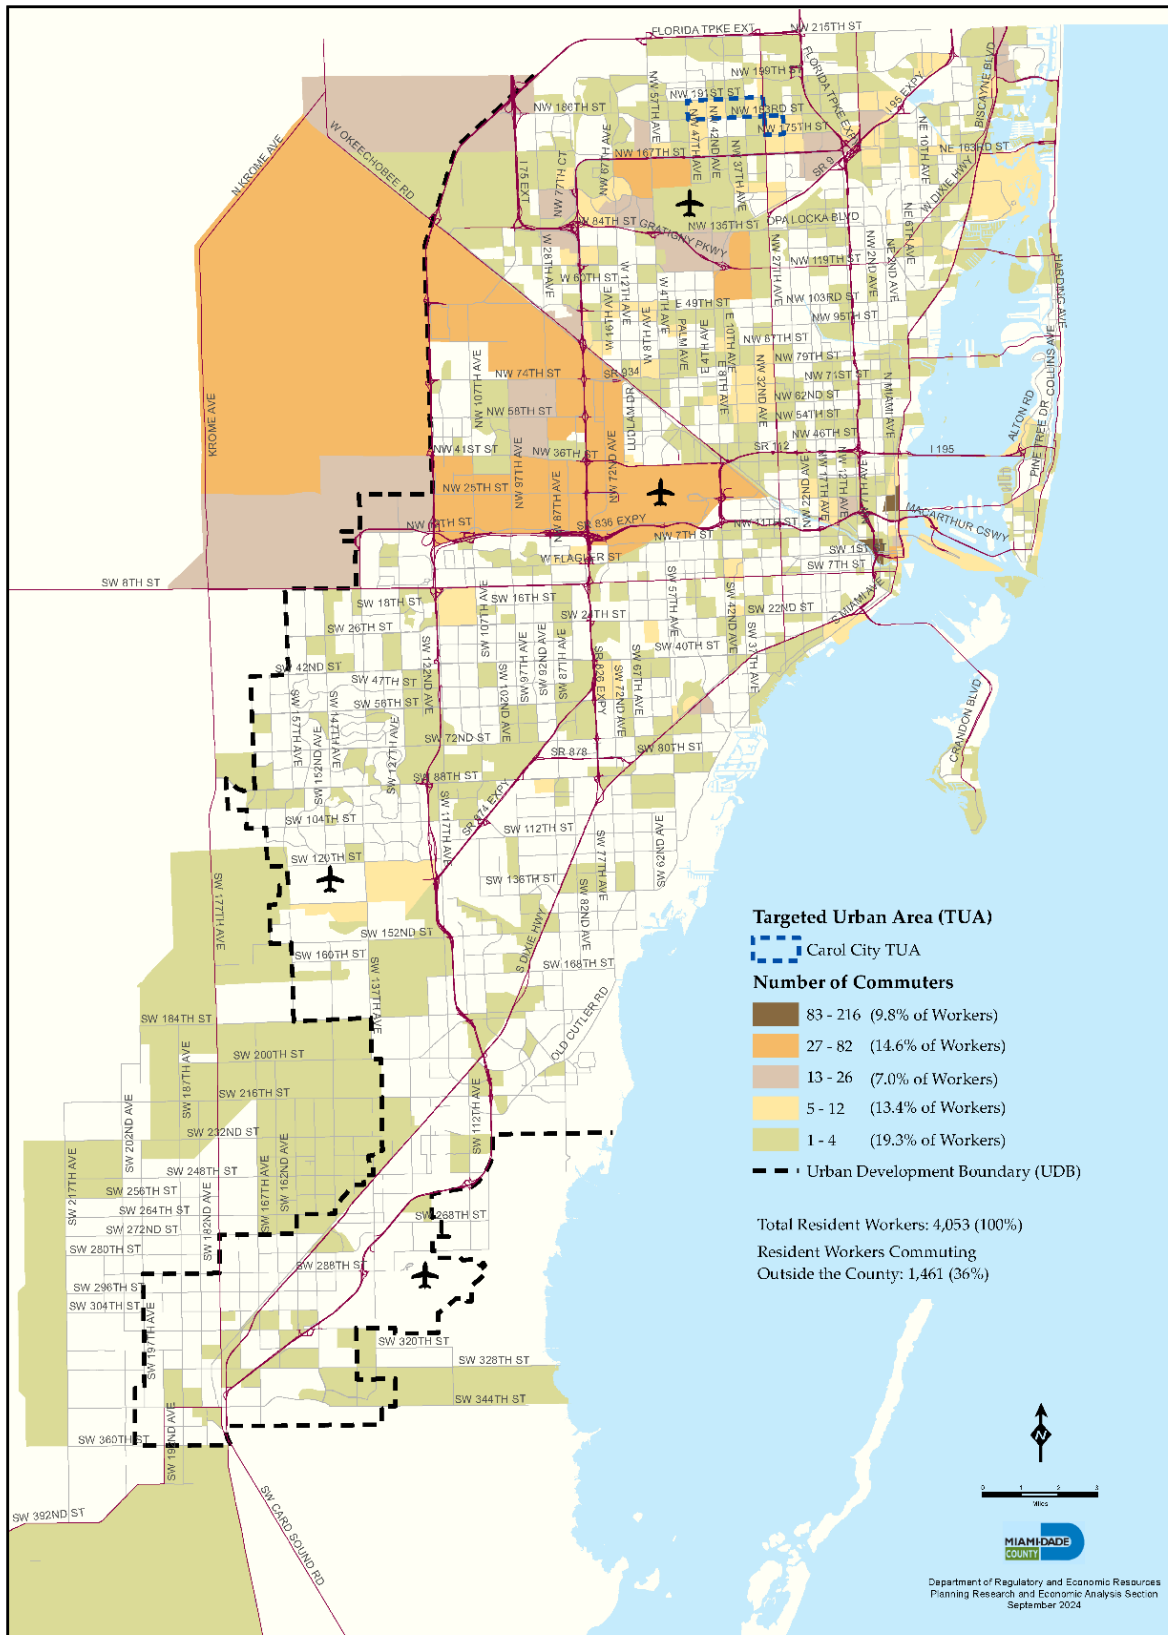

The 2022 median travel time in the TUAs ranged from a low of 18.6 minutes in Florida City to a high of 34.4 minutes in Richmond Heights. As seen in Figure 9, the average travel time in six of the nine TUAs was more than the Miami-Dade County average in 2022, however it improved between 2017 and 2022 in all TUAs. The greatest decrease, 14 minutes per trip, was seen in Florida City, followed by 11 minutes per trip in West Little River. The average drop in commute time was 6 minutes per trip in TUAs between 2017 and 2022.

***In 2022, median travel time in most of the TUAs was more than the Miami-Dade County average but the situation was improved between 2017 and 2022.***

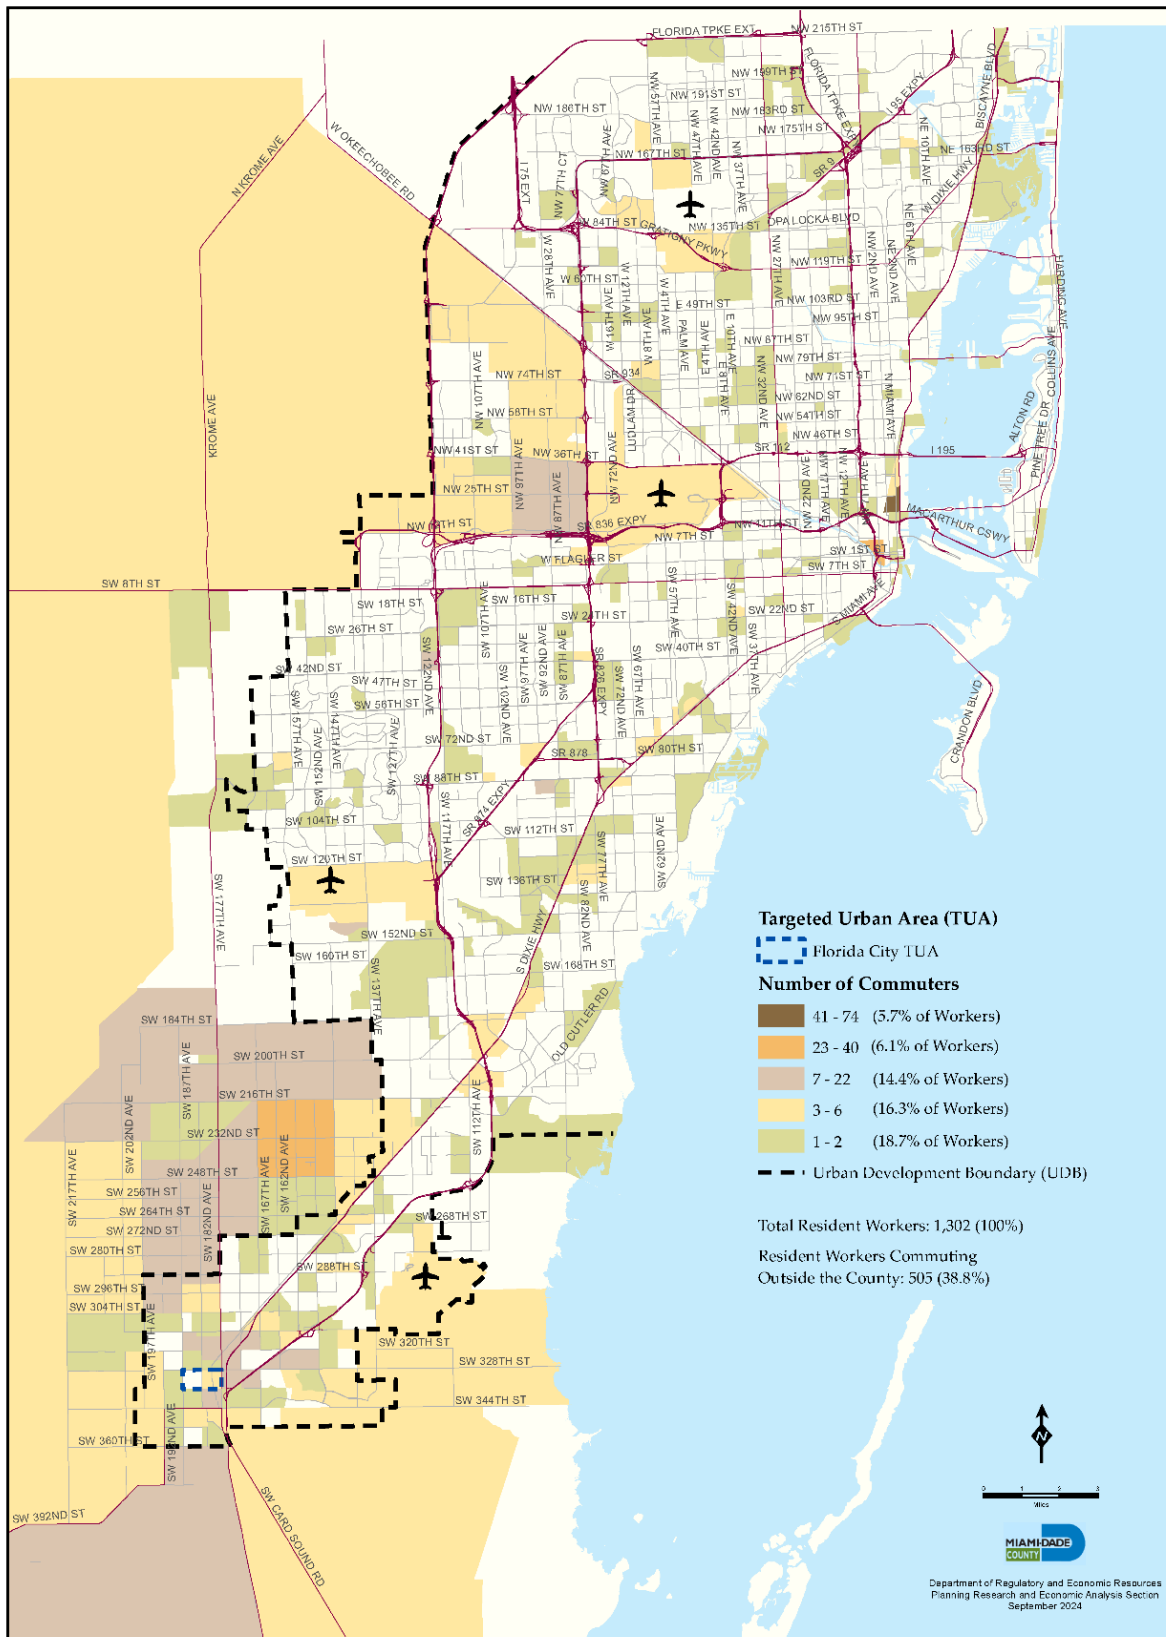

### Commuting Patterns

The following pages present maps illustrating the geographic commuting patterns of residents in each of the nine Black-majority TUAs. It highlights the place of work of the TUA workers by Census Tract. Each map represents the place of employment of the resident workers from one TUA.

**Map 1: Where did Carol City TUA Residents Work**

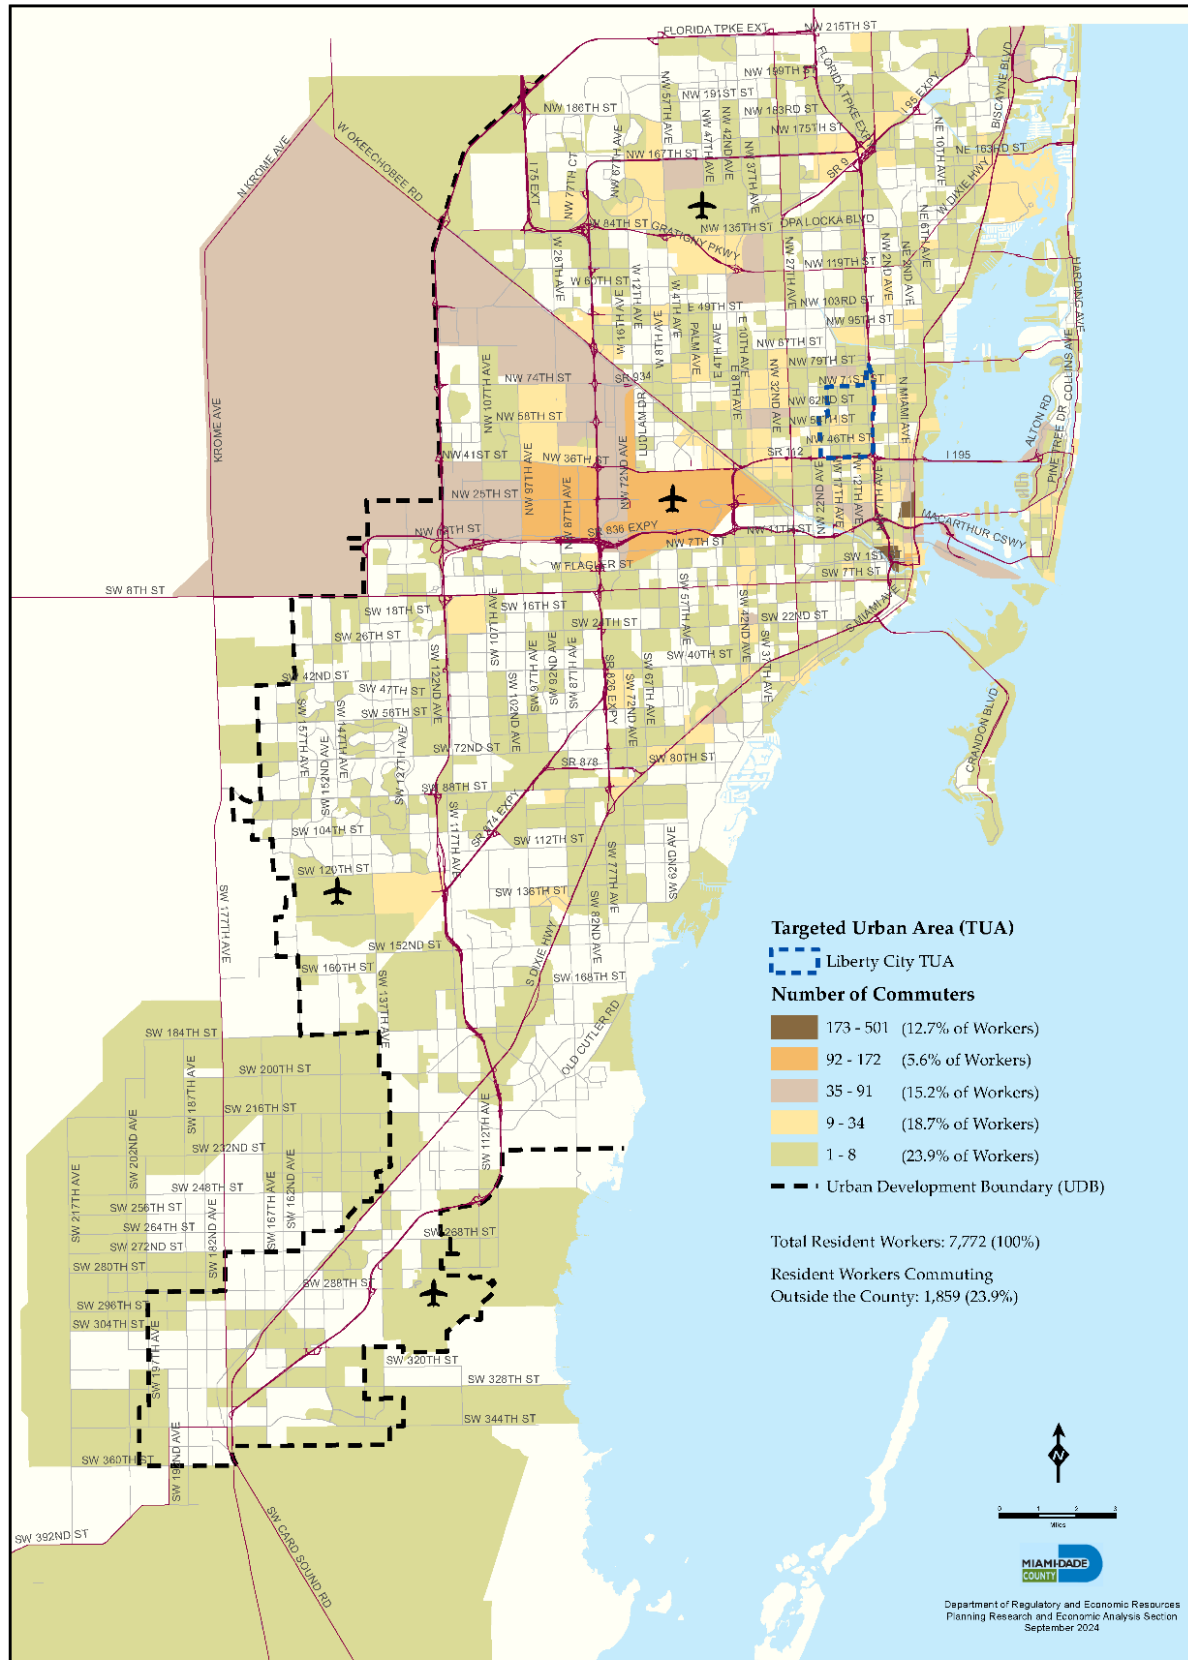

**Map 2 Where did Florida City TUA Residents Work**

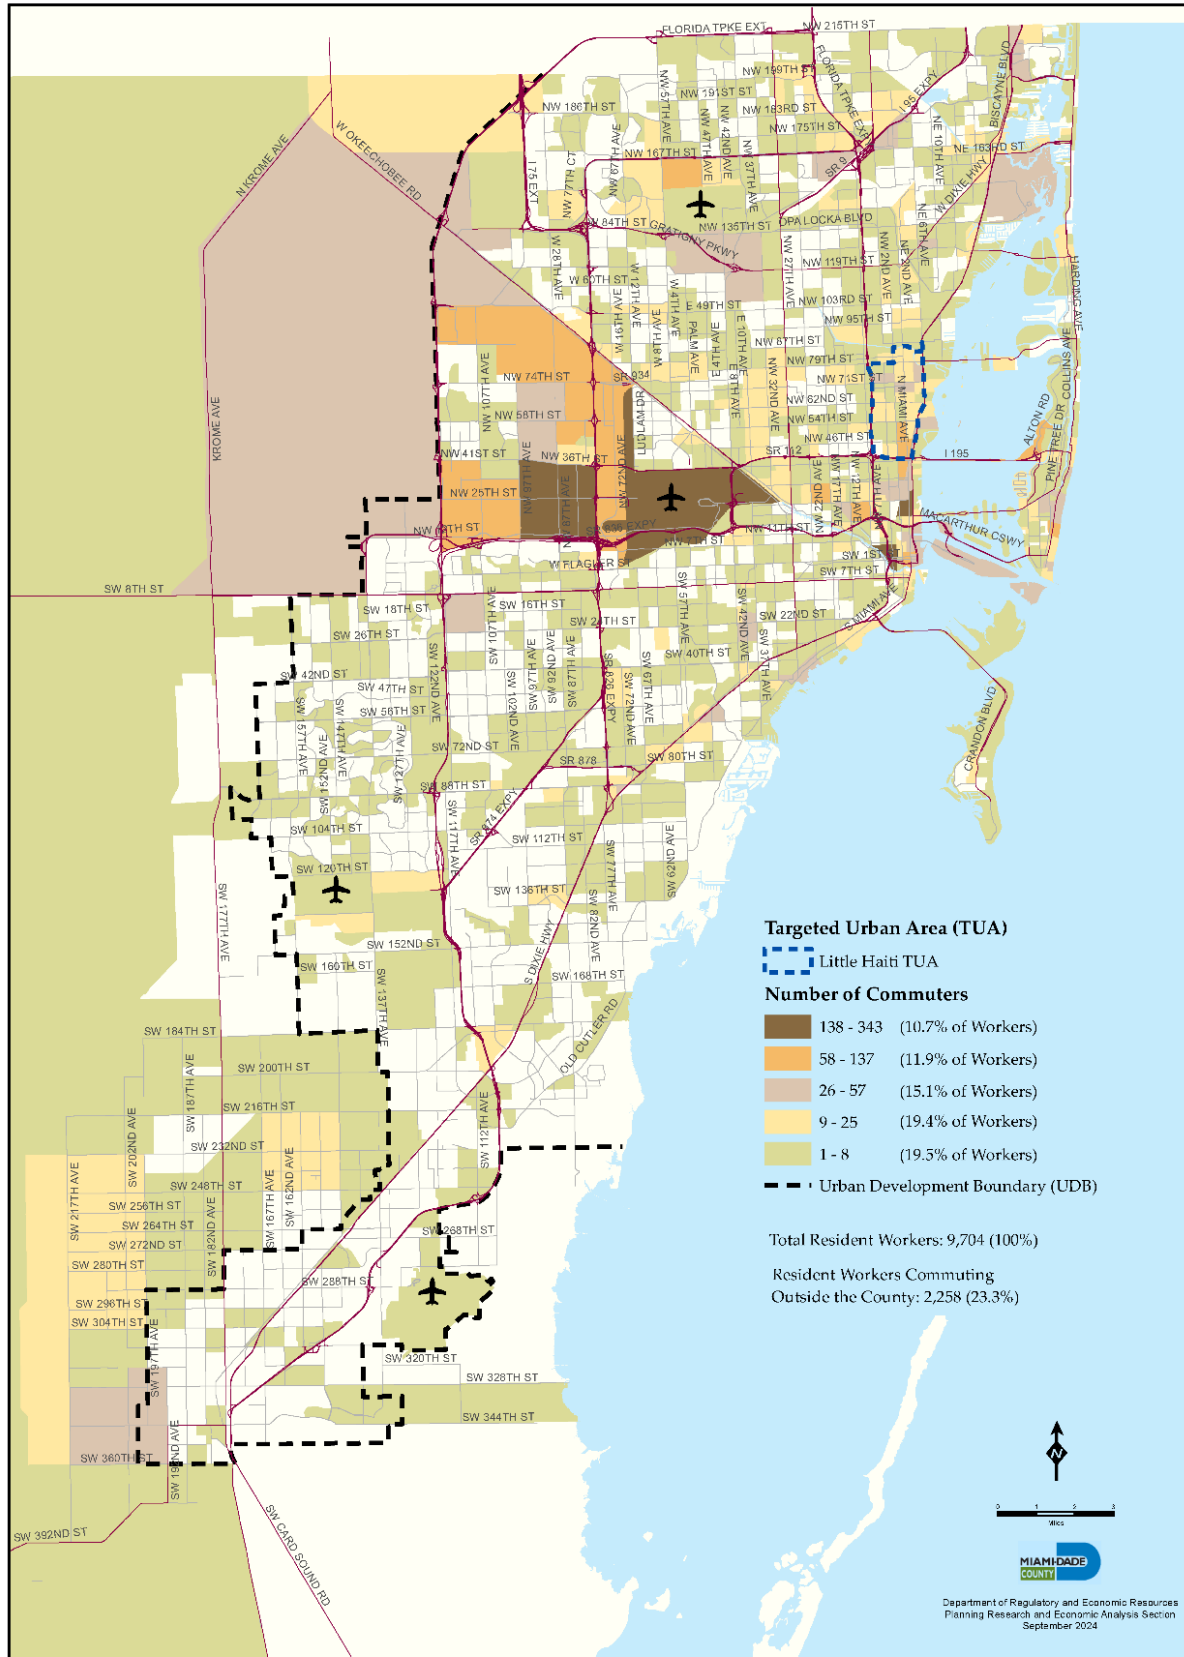

**Map 3: Where did Liberty City TUA Residents Work**

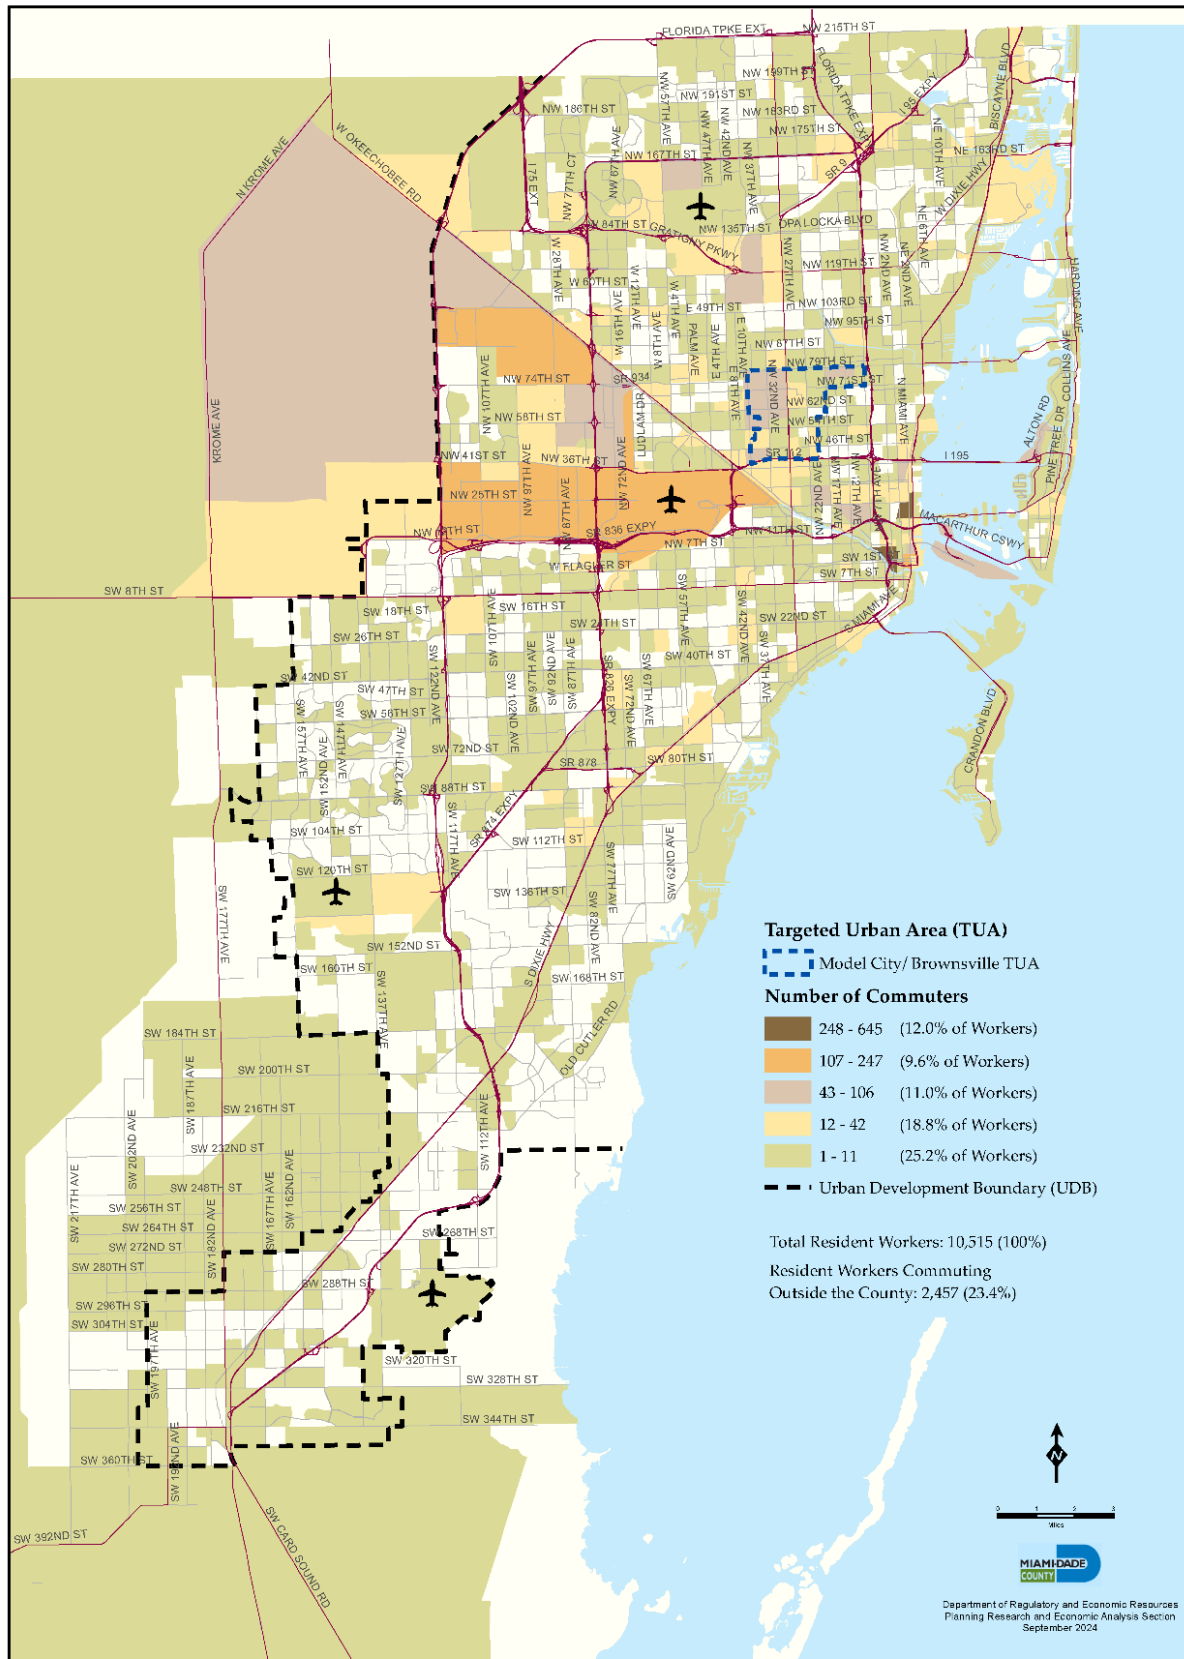

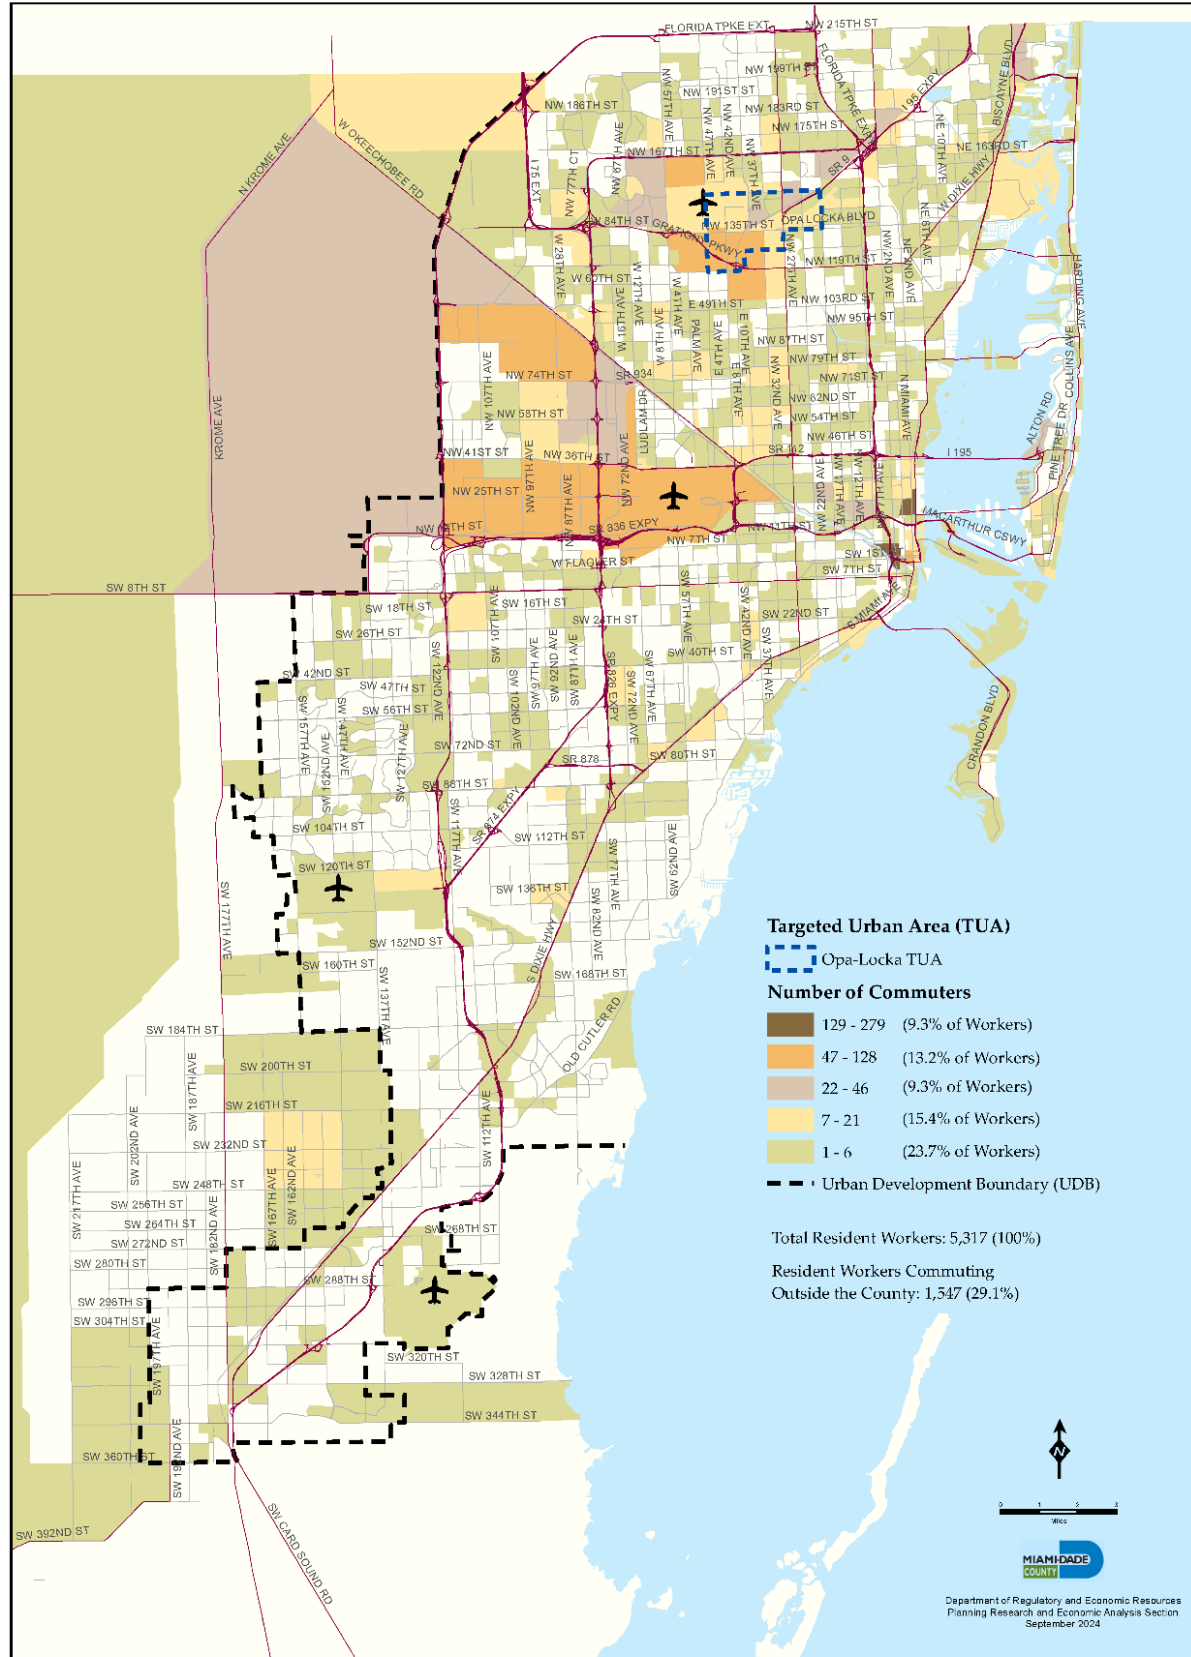

**Map 4: Where did Little Haiti TUA Residents Work**

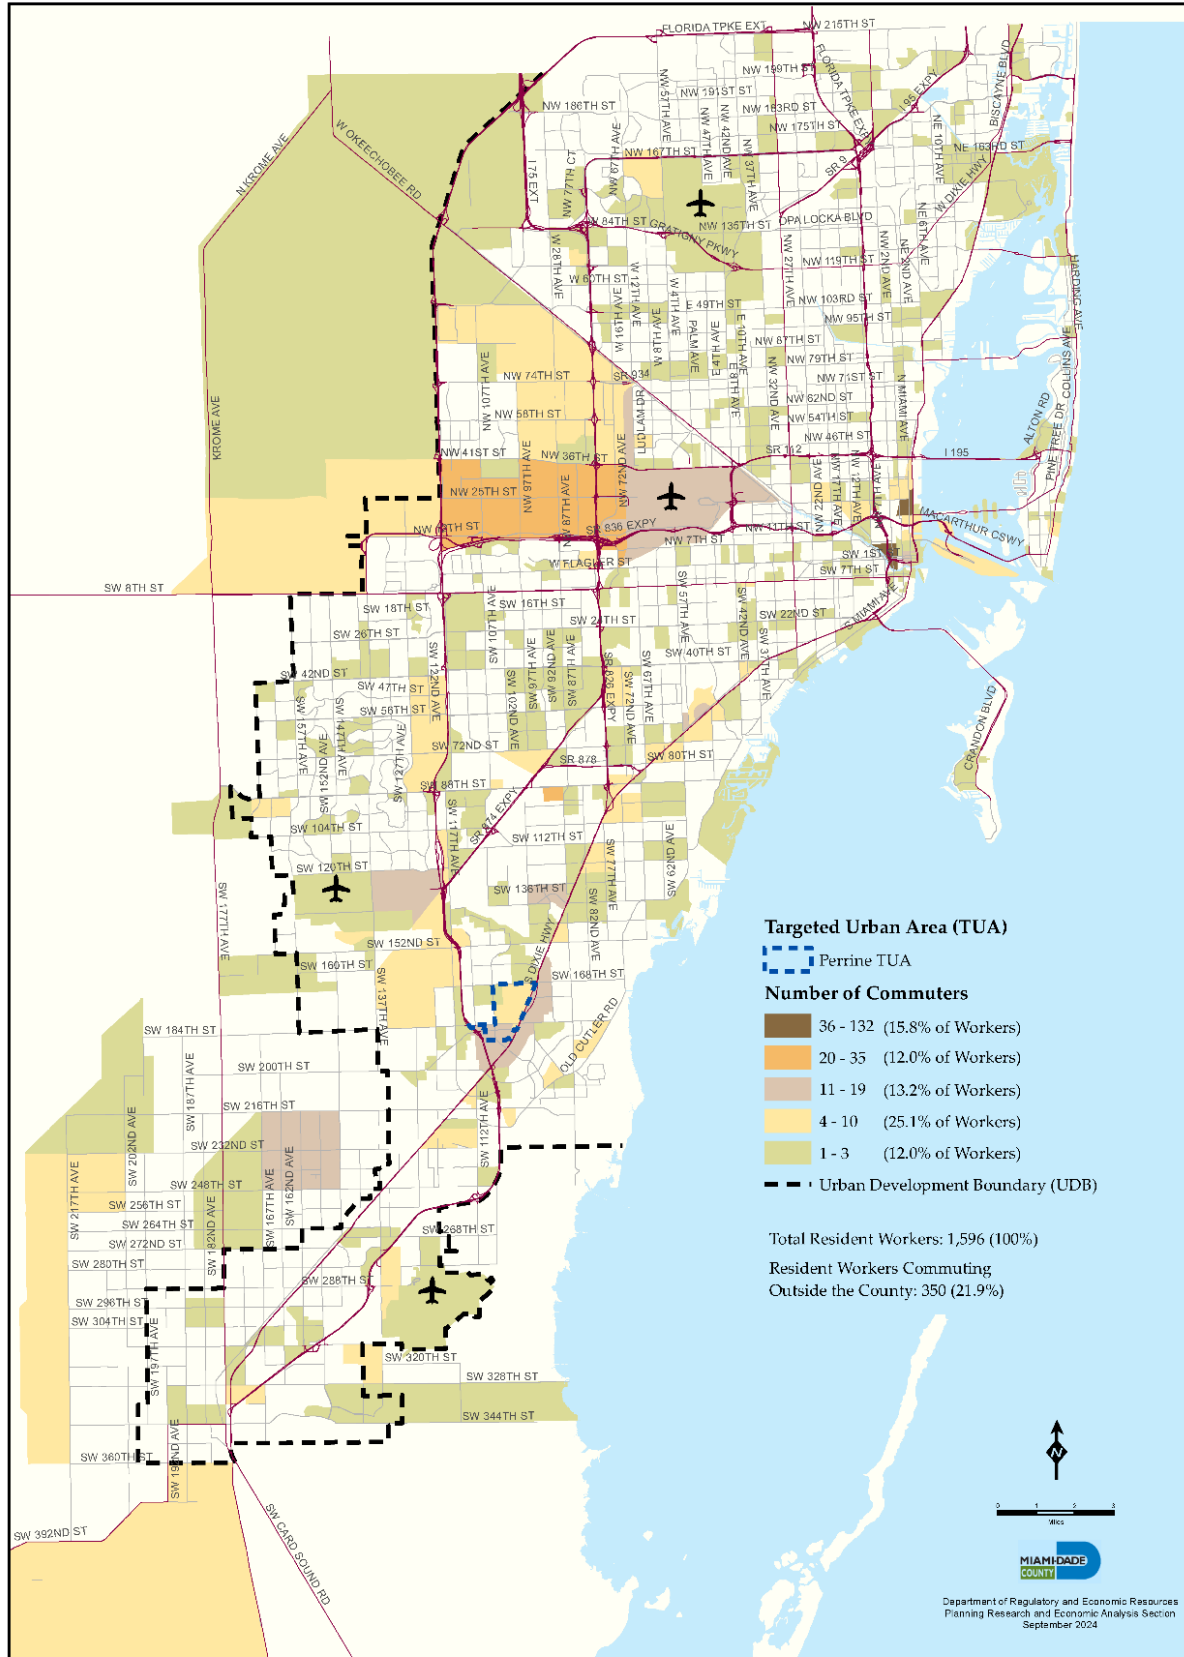

**Map 5: Where did Model City/Brownsville TUA Residents Work**

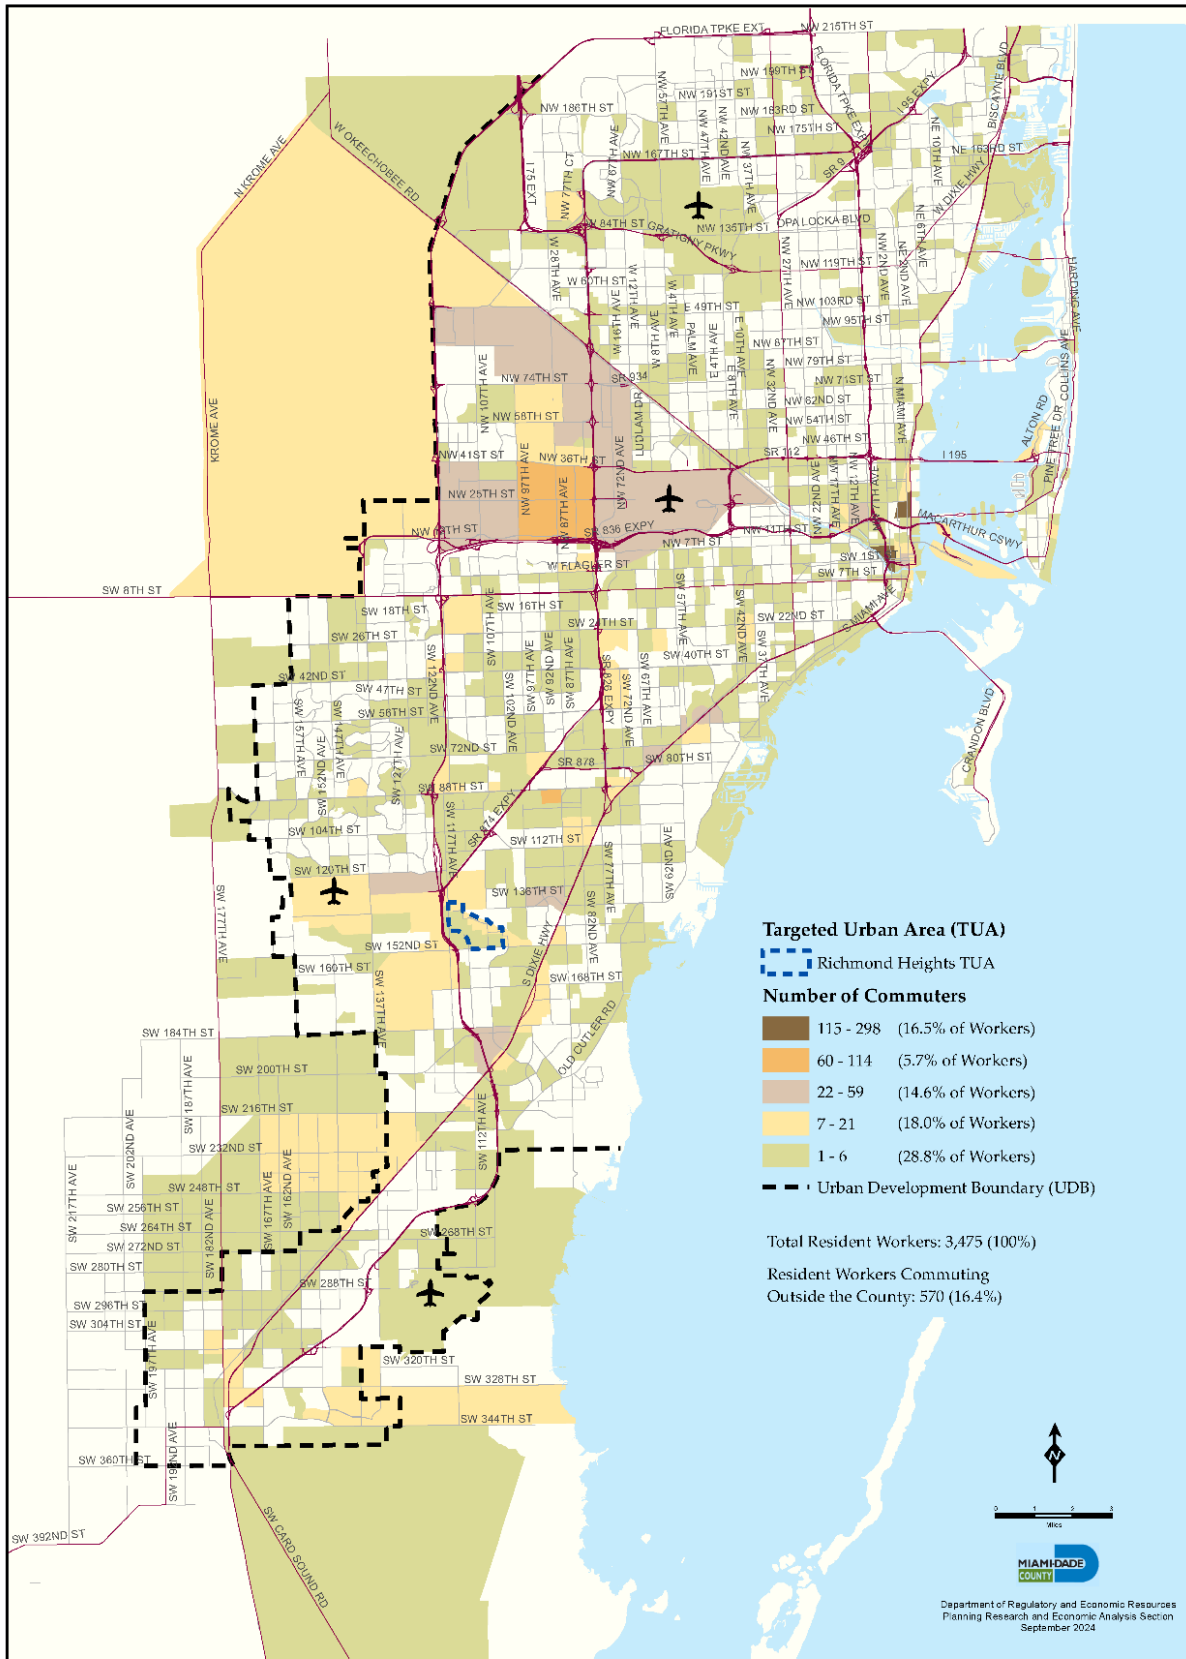

**Map 6: Where did Opa-Locka TUA Residents Work**

**Map 7: Where did Perrine TUA Residents Work**

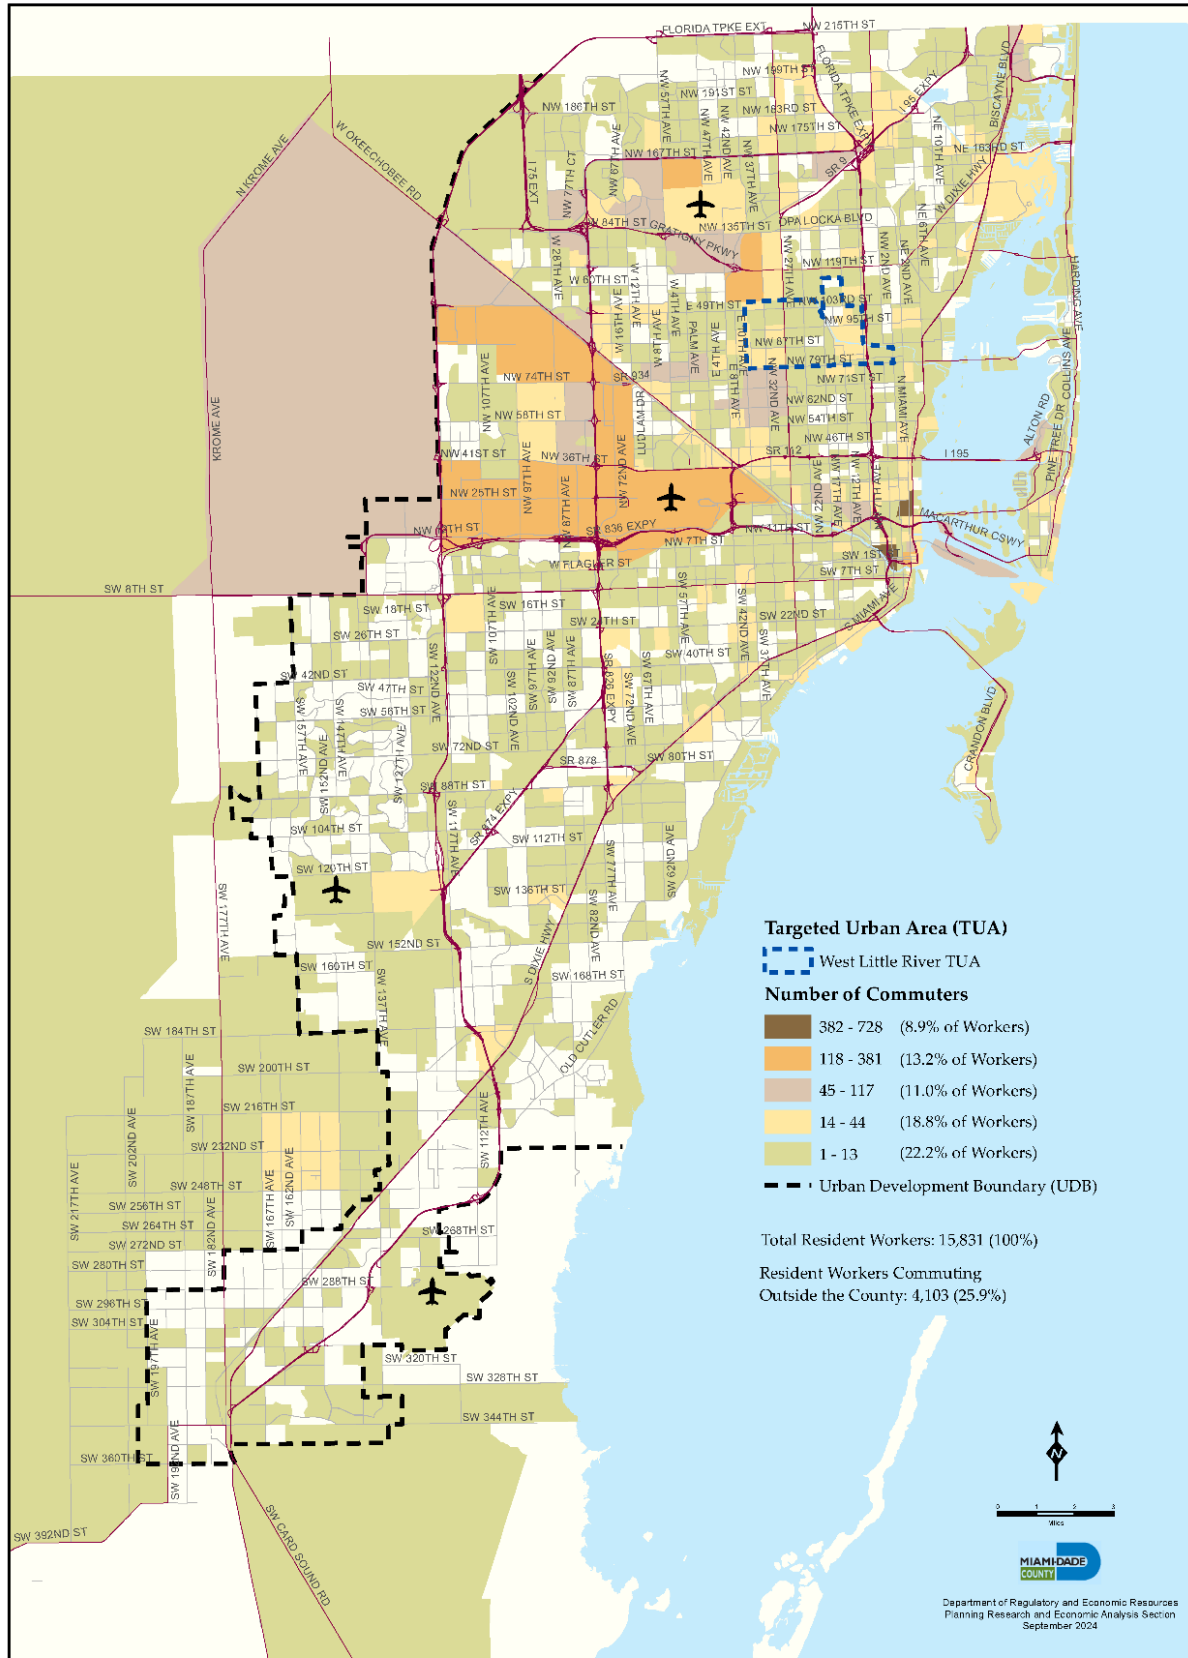

**Map 8: Where did Richmond Heights TUA Residents Work**

**Map 9: Where did West Little River TUA Residents Work**

## Business Activity

Business activity, as measured by the number of business establishments located inside the TUAs, increased over the 5-year period in every TUA. Collectively, the number of establishments increased

**Collectively, the number of establishments increased 73.1% from 4,928 establishments in 2017 to 8,531 establishments in 2022 in TUAs.**

73.1% from 4,928 establishments in 2017 to 8,531 establishments in 2022. The largest percent increase was in Little Haiti where establishments more than doubled, up 101% from an initial 2017 count of 1,419 business establishments. Little Haiti also contributed the largest numerical increase by adding 1,433 business establishments from 2017 to 2022. In comparison, business establishments in the rest of the county grew 92.4% over the 5-year period, adding 81,907 establishments.

Data on the business activity by industry shows that the highest concentrations of establishments in the TUAs were in retail trade and personal services in both 2017 and 2022. In 2017 the two accounted for 37.4% of all business establishments, and by 2022 this share had fallen to 28.4% of total establishments. Growth was seen in health care and social assistance, up 2.7% and unclassified establishments, up 14.8%. The growth in this latter category may very well represent “on-demand” businesses such as Uber, Lyft, Door Dash and similar types of businesses.

Table 2: How did Business Establishments Grow between 2017 and 2022?

	Carol City	Florida City	Liberty City	Little Haiti	Model City/Brownsville	Opa-Locka	Perrine	Richmond Heights	W Little River	Total: Black TUAs	Rest of the County
2022	178	122	663	2,852	1,377	1,373	785	66	1,115	8,531	170,588
2017	106	84	388	1,419	919	838	473	38	663	4,928	88,681
Change	72	38	275	1,433	458	535	312	28	452	3,603	81,907
% Change	67.9%	45.2%	70.9%	101.0%	49.8%	63.8%	66.0%	73.7%	68.2%	73.1%	92.4%

## Healthcare

The share of the population covered by health insurance increased in six of the nine TUAs between 2017 and 2022 as shown in Figure 10. For all the TUAs combined, the 2022 share with health insurance was 79.5% compared to 75.9% in 2017. However, the share of persons covered by health insurance in TUAs still trailed the rest of the county by 6.1% in 2022. The share of persons covered by health insurance in the rest of the county in 2022 was 85.6%, up from 79.7% in 2017. The coverage gap between the TUAs and the rest of the county had widened from 3.8% to 6.1% between 2017 and 2022. The highest rate of coverage was in Richmond Heights, at 94.4%, The lowest 2022 rate was in Little Haiti, at 75.9%.

**The coverage gap between the TUAs and the rest of the county widened from 3.8% to 6.1% between 2017 and 2022. The highest rate of coverage was in Richmond Heights, at 94.4%, The lowest 2022 rate was in Little Haiti, at 75.9%.**

For children, under 19 years of age, seven of the nine TUAs had coverage rates over 90%. These were Richmond Heights, Opa-Locka, Perrine, Model City/Brownsville, Liberty City, Florida City, and Little Haiti. The highest rate was in Richmond Heights at 99.7% and the lowest child-rate was in Little Haiti at 90.2%. One other TUA that was slightly below the 90% rate of coverage was West Little River at 89.7%.

Figure 10: What Share of TUA Residents have Health Coverage

## Crime Reports

While there can be significant issues with respect to interpreting crime data, crime and the perception of crime can have a very real impact on a local area economy. It can affect the ability of residents to obtain quality jobs locally or regionally, and it can have an impact on the locational decisions of startup and relocating businesses. The data used here are broken down into reports and arrests. The combined 2022 crime rate per 1,000 population in the TUAs was 75.0 crimes per 1,000. Arrests per thousand population for 2022 was 12.2. In comparison, countywide the respective rates were 27.8 reports and 7.4 arrests per thousand population.

**The combined 2022 crime rate per 1,000 population in the TUAs was 75.0 crimes per 1,000.**  
**Arrests per thousand population for 2022 was 12.2.**

Figure 11: How Did Crime Rates Change between 2017 and 2022?

The crime reports and arrests varied noticeably by TUA, shown in Figure 11 and Figure 12. Under reported crimes, the highest crime rate was in Perrine with a rate of 193.8 per thousand residents, and

Richmond Heights had the lowest crime-report rate at 34.4 reports per thousand residents in 2022. For arrests, the highest total arrest rate was in Perrine at 31.9 arrests per thousand, and the lowest in Carol City at 4.5 per thousand. In 2022, Florida City had the highest juvenile arrest rate at 2.6 per thousand, followed by Perrine at 2.4 per thousand.

Figure 12: How Did Arrests Rate Change between 2017 and 2022?

### III. OBSERVATION SUMMARY –HOUSING

#### Home Ownership

Increasing home ownership in a community is often a priority because it brings stability to neighborhoods, and potentially wealth accumulation for the homeowners, thus giving redevelopment efforts in those areas time to work. Specifically for Black households in the TUAs, the homeownership rate in 2022 was 35.6%, up from 33.9% in 2017. However, the 2022 Black home-ownership rate in the TUAs was just 73.1% of the Black home-ownership rate in the rest of the county, where it stood at 48.7%. Furthermore, the 2022 Black home-ownership rate in the rest of the county was 91% of the overall ownership rate for all races and ethnicities in the rest of the county.

When measuring the combined ownership rate among all households in the TUAs regardless of the race or ethnicity of the household, the 2017 homeownership rate was 36.6%. By 2022, the all-household ownership rate had increased slightly to 36.8%. For the rest of the county in 2017, the ownership rate among all households was 53.8%, falling to 53.5% by 2022. Compared to the rest of the county, the ownership rate in the TUAs was 68.1% of the rest-of-the-county rate (36.6%/53.8%) in 2017 and to 68.8% (36.8%/53.5%) in 2022. Collectively, the TUAs fared slightly better with a minimal increase in TUA-ownership rate, while ownership rate in the rest of the county fell marginally between 2017 and 2022.

Figure 13: What is the Homeownership Rate in the TUAs?

Some individual TUAs fared better as shown in Figure 13. Two of the TUAs had home-ownership rates greater than 50%. In Richmond Heights, the home-ownership rate in 2022 was 77.0%, though down from 2017's rate of 85.2%. In Carol City the rate grew to 53.2% in 2022 from 43.9% in 2017. Four other TUAs saw home-ownership rates increase. Model City had an ownership rate of 32.3%, up from the 2017 rate of 31%. The 2022 ownership rate in Opa-Locka grew to 32.0%, from 28.7% in 2017. In Little Haiti the rate grew to 22.9% from 21.2%. And, in Florida City the rate increased to 18.9% from 13.5%. The largest drop, other than Richmond Heights, was seen in Perrine, where the rate fell from 45.5% in 2017 to 41.4% in 2022.

## Home and Rent Values

The data shows that home values continue to rise across the county. The weighted average of the owner-occupied home value in the TUAs increased 67.9% between 2017 and 2022 from \$169,161 to \$284,030 in 2022 inflation-adjusted dollars. Owner-occupied home values in the rest of the county increased 23.4% over the same period from \$319,082 to \$393,840 in 2022 dollars. Note, these are reported home values, not sales prices. The median home values in 2022 ranged from a low of \$131,250 in Florida City to a high of \$456,079 in Little Haiti as seen in Figure 14. Some of the biggest increases included: Little Haiti where the value grew 105.3% from \$222,182 to \$456,079; Carol City where the value grew 97.4% from \$162,690 to \$321,173; Opa-Locka where the value grew 95.4% from \$132,862 to \$259,600; Liberty City where the value grew 85.1% from \$151,075 to \$279,656; and Perrine where the value grew 71.0% from \$156,163 to \$266,964.

Figure 14: How Much do Resident Homeowners Report Their Homes are Worth?

The median gross rent, weighted and averaged across all the TUAs, rose 8.1% between 2017 and 2022, after adjusting for inflation. The 2017 median gross rent was \$1,100 in the TUAs, increasing to \$1,189 in 2022. The range among the TUAs, shown in Figure 15, was significant. The lowest 2022 median rents were in Model City/Brownsville, at \$1,089. The highest were in Richmond Heights, with the 2022 median at \$1,578. In the rest of the county, median gross rents grew 9.5% between 2017 and 2022 from \$1,540 to \$1,686.

Figure 15: How Much do Resident Renters Report They Pay for Rent?

## Housing Affordability

Relatively low incomes and surging home and rent values are precisely the formula for creating cost-burdened households, that is, households spending 30% or more of their income for housing costs. Among homeowner households, the average share of TUA households that were cost-burdened was 34.5% in 2022, which was significantly higher than the national average of 22.0% and Florida average of 25.8%. The share of cost-burdened homeowners rose 0.5% between 2017 and 2022 from 34.0% to 34.5%. The share in the rest of the county, however, fell 2.2% over that period, from 37.5% to 35.2%. As seen in Figure 16, three of the TUAs saw the shares increase over this period, with the range from an increase of 16.3% in Little Haiti, to an increase of 1.9% in West Little River.

Among the cost-burdened households are those that are severely cost burdened. Severe cost burden is defined as a household paying 50% or more of income toward housing-related costs. The average share of TUA households that were severely cost burdened was 17.9%, almost double its national counterpart (9.1%) and 6.4% higher than the Florida average (11.5%) in 2022. For these owner households, the rate of severe cost burden increased at a faster rate compared to cost-burdened households. The average share of severely-cost-burdened homeowner households in TUAs rose 1.0% between 2017 to 2022 from 16.9% to 17.9%. In comparison, the average share of severely-cost-burdened homeowner households in the rest of the county dropped 1.2% from 18.0% to 16.8%. A severely-cost-burdened household is forgoing basic necessities in order to pay for housing. Four of the TUAs saw the shares of owner-households with severe cost-burden increase over the period. The increase ranged from a low of 2.5% in Richmond Heights, to 11.3% in Little Haiti. The greatest decline in share of severe cost burden was seen in Florida City, down 11.6%.

**Among homeowner households, the average share of TUAs that were cost-burdened rose 0.5% between 2017 and 2022. The average share of cost-burdened renter households in the TUAs declined by 4.0%.**

Figure 16: How did Cost Burden & Severe Cost Burden Change for Homeowner Households from 2017 to 2022?

The average share of renter households in the TUAs that were cost-burdened was 66.6%, 16.7% higher than the national average (49.9%) and 9.0% more than the statewide average (57.6%). Between 2017 and 2022, the share of cost-burdened renters declined by 4.0%, from 70.6% to 66.6%. The 5-year decline in the rest of the county was 2.8%, from 65.4% to 62.6%. Figure 17, below, shows the changes by the individual TUAs. Three of the TUAs saw the share of cost-burdened renter households increase over the period. These were: Richmond Heights (23.3%), Carol City (6.8%), and Florida City (2.0%). Among the remaining TUAs, the largest decrease in share was in Perrine, down 23.1%, followed by Opa-Locka, down 7.2%.

The share of severely-cost-burdened renter households in the TUAs (39.3%) was also higher than its US and Florida counterparts, which was 25.0% and 29.4% respectively. It declined 1.0% between 2017 and 2022, from 40.3% to 39.3%. This compares to a decline of 2.4% in the rest of the county, from 36.2% to 33.8% of households severely cost burdened. Three of the TUAs experienced an increase in the severely-cost-burdened share. These were: Florida City (11.3%), Little Haiti (5.2%), and Liberty City (0.3%). Among the remaining TUAs, the largest decreases were in Richmond Heights (20.9%), and Opa-Locka (10.2%).

Figure 17: How did Cost Burden & Severe Cost Burden Change for Renter Households from 2017 to 2022?

## Housing Vacancy

Between 2017 and 2022, the combined vacancy rate of all types in the TUAs dropped from 13% to 9.5% of total units. In comparison, in the rest of the county, the rate dropped from 15.1% to 11.6% over the same period. There were other differences with respect to vacancies between the TUAs and the rest of

**Between 2017 and 2022, the combined vacancy rate in the TUAs for all types of vacancies dropped from 13% to 9.5% of all units.**

the county. In the TUAs, the share of vacant units for rent fell from 40.4% of the total to 27.7%, while in the rest of the county, the vacant-for-rent share increased from 21.5% to 24.4%. The share of vacant for-sale units in the TUAs dropped from 11.5% in 2017 to 10.7% in 2022, versus 10.1% and 9.6%, respectively, in the rest of the county. The most significant change, however, came from vacant units that were defined

as “other.” These included units that were for seasonal, recreational or occasional use, for migrant workers, and “other vacant.” In the TUAs, the share of these “other” units grew from 48.1% of the total vacant units in 2017, to 61.6% in 2022. Many of these “other” units may very well be short term rentals and thus not available to residents of the TUAs or the rest of the county. Within individual TUAs, the 2022 vacancy rate of for-sale and for-rent units ranged as a percentage of all units from a high of 6.3% in Perrine, to a low of 2.4% in Model City/Brownsville.

## IV. OBSERVATION SUMMARY – EDUCATION

### Educational Attainment (Adults)

Educational attainment by adults, aged 25 years or older achieving at least a high school diploma, increased in the combined TUAs between 2017 and 2022, from 71.8% to 73.9%. In comparison, the rate in the rest of the county increased from 81.8% in 2017 to 83.5% in 2022. The relative performance of the TUAs was better than the rest of the county, with share of adults with a high school diploma or above growing faster than in the rest of the county (2.1% vs. 1.7%). The change in the attainment rate by individual TUA is shown in Figure 18. The rate declined in two of the nine TUAs. The biggest decline was in Richmond Heights, 4.8%, followed by Florida City, 3.6%. The biggest increase was in Carol City, where the high-school-and-above educational attainment rate increased 6.5%.

***Educational attainment by adults, age 25 years or older achieving at least a high school diploma, increased in the combined TUAs between 2017 and 2022, from 71.8% to 73.9%.***

in the rest of the county increased from 81.8% in 2017 to 83.5% in 2022. The relative performance of the TUAs was better than the rest of the county, with share of adults with a high school diploma or above growing faster than in the rest of the county (2.1% vs. 1.7%). The change in the attainment rate by individual TUA is shown in Figure 18. The rate declined in two of the nine TUAs. The biggest decline was in Richmond Heights, 4.8%, followed by Florida City, 3.6%.

Figure 18: How Did Educational Attainment Change for Adults in the TUAs between 2017 to 2022

### College Enrollment (Young Adults)

Educational enrollment is a measure of the college enrollment rate of young adults, aged 18 to 24 years. Overall, the college enrollment rate of the combined TUAs in 2022 of 49.5% was much lower than the non-TUA areas in Miami-Dade County which was 70.1%. Between 2017 and 2022, enrollment of young adults in the combined TUAs decreased by 1.4% from 50.9% to 49.5%. Over the same period, for the non-TUA areas in Miami-Dade County, college enrollment among those 18-to-24 years old decreased by more, 3.8%, from 73.9% to 70.1%.

***Between 2017 and 2022, enrollment of young adults in the combined TUAs decreased from 50.9% to 49.5%.***

Figure 19, on the following page, shows the enrollment rate change by individual TUAs from 2017 to

2022. Six of the nine TUAs experienced a drop in enrollment, with the largest in Liberty City, dropping by 19.4% from 53.6% to 34.2%, and Richmond Heights, dropping by 16.2% from 80.6% to 64.4%. The largest increase was in Carol City, up 21.8% to 57.0%, followed by Model City/Brownsville up 16.6% to 58.7%.

Figure 19: How Did the Share of Young Adults in the TUAs, Age 18-to-24 years Old, that were Enrolled in College Change Between 2017 and 2022?

## High School Graduation Rates

Figure 20 shows the change in high school graduation rates between 2017 and 2022. Note that there is a loose connection between the high school and TUA boundaries. All the schools serving the TUAs improved significantly during this period. The high schools serving Florida City saw an increase of 26.0% in the graduation rate over the period, from 73.4% to 99.4%. On average, the remaining TUAs saw an improvement of 14.1% over the five years to an average graduation rate of 93.2%. Countywide, graduation rates improved 9.7% over the same period to 90.3%.

Figure 20: Change in High School Graduation Rates: 2017 to 2022

## Student Retention

The average high school dropout rate for all schools serving the TUAs improved from 7.1% in 2017 to 2.3% in 2022. Countywide, the dropout rate also decreased over that period from 5.7% in 2017 to 2.7% in 2022. All the nine TUAs saw the dropout rate decline, led by Carol City, with a decrease of 8.2%, as shown in Figure 21, from 8.6% in 2017 to 0.4% in 2022.

Figure 21: Change in High School Dropout Rate - 2017 to 2022

## V. POLICY RECOMMENDATIONS

The observations in this report paint a picture of the TUAs that remains very complex. While progress is being made in some areas, such as growing incomes and falling unemployment, in other areas the TUAs are making no progress or losing ground, such as homeownership and college enrollment. Even in some areas where progress is being made, the TUAs still fall farther behind the rest of the county when even greater progress is being made there, such as growth of business establishments and healthcare coverage. The scorecard measures salient socioeconomic conditions in the TUAs, and it is important that these conditions be ameliorated while more profound, deeper long-term solutions can be implemented that get at the causes of the current situation.

Therefore, among the solutions must be those that are more systemic, that address the basic relationships between the residents of the TUAs and the economy. It is not just enough to find jobs for everyone if those jobs do not provide a living wage. Finding homes for families in the TUAs is not enough if those families will be left cost-burdened or are locked out of the market by escalating prices or long wait lists from participating in the wealth from home value appreciation.

The recommendations that follow will not answer all the questions, or even very many of them. They will, however, provide an impetus to initiate further dialogue and analysis. Before addressing recommendations relating to the specific categories of the scorecard, first there will be two recommendations relating to process.

### A. Process

1. Conduct a study and consider adjustments to the Targeted Urban Areas to enhance the focus the attention on the county's Black population as originally intended. Currently, the TUA Scorecard captures 27% of the county's total Black Population. Data from the American Community Survey and other sources now make it possible to select and aggregate the data for census tracts or census block groups that are majority Black. This would make it possible to broaden the scorecard to cover a much higher percentage of the Black population of the county. Periodically repeat this process as demographics change.
2. Replace the annual scorecard with a five-year updated scorecard. In the intervening years, subject-area reports drawn from needs identified by the previous scorecard can be produced. There is no question that periodic snapshots of conditions are essential in keeping resources focused where they are most needed. However, small-area data sources are produced on a rolling 5-year basis, making the year-to-year differences less significant and direction of change difficult to identify. In-depth reports on key topics and produced by subject-area specialists can provide far more focused insight for policymakers.

### B. Jobs/Economic Development

Even as economic conditions have improved over the past five years in the TUAs according to many of the measures reported here, the residents remain behind the rest of the county according to nearly all measures, especially in this economic category. Solutions are required that address the needs of the workers in the TUAs, those businesses that are inside of and/or serve the TUAs, and the quality of the jobs available to the TUA residents created in the local economy. The solutions required must be more than incremental if the current dynamic is to be broken.

1. Identify the opportunity jobs in the local economy, those jobs that do not require more than a high school diploma and pay the regional median income or higher, the skill sets of those jobs, and target funding for workforce development programs to workers in the TUAs focused on these jobs, including internships or apprenticeships and the like.
2. Tailor small business and micro-business programs for businesses in and around TUAs, and along transit corridors directly connecting to the TUAs and prioritize those paying a living wage.
3. Identify initiatives which, in partnership with major employers, industry and trade associations, and chambers of commerce, will lead to improvements in the quality of the low-wage service jobs particularly in the tourist and retail-based segments of the economy in terms of pay, benefits, employment, schedule security, and personal growth opportunities.
4. Analyze the public transportation system serving the TUAs in the context of where the residents of those TUAs currently work and where quality jobs can be found. Recommend adjustments where appropriate to improve access to opportunities.
5. Identify child-care deserts or pockets of low or unaffordable supply in and around the TUAs, and target resources to providers to increase the supply of affordable childcare available to families in the TUAs.
6. Partner with the local medical schools and hospitals to ensure there is adequate capacity in fully funded clinics in every TUA so that no one lacks access to health care.
7. Continue to add capacity and broaden the scope of diversionary programs for drug crimes and juvenile crimes including expungement so that these crimes do not automatically translate into practical exclusion from the labor force.

#### **C. Housing**

The reality of the housing market in the TUAs, and in much of the county, is that a large segment of the population works in relatively low-wage service sector jobs such as retail, food service and accommodation. Prevailing wages in these industries result in persistent housing cost burden, especially for rental households and individuals, and effectively, their exclusion from the homeowner market. The extent of the problem, especially for the lowest income households, require solutions that go well beyond the provision of housing supply and necessitate more concrete steps.

1. Assess the extent and characteristics of the needs of households in each of the TUAs for affordable housing to develop customized housing strategies for each.
2. Identify vacant or underutilized publicly owned properties and other redevelopment opportunities in each of the TUAs suitable for mixed income housing development.
3. Continue to seek innovative land use and zoning code revisions that will promote the private for-profit and not-for-profit development of mixed income and affordable infill housing.
4. Continue to aggressively target resources to develop affordable and mixed income housing through public-private partnerships with special attention given to the specifically identified needs of the TUA residents.

#### **D. Education**

The school board has made progress in recent years targeting graduation rates and retention. It is beyond high school where the largest differences appear between the TUAs and the rest of the county. The prevalence of bachelor's degrees or higher in the TUAs trails the rest of the county by a significant margin. Given the lower rates of college enrollment among 18-to-24-year-old residents, it seems likely that high school graduates are not continuing to college in the first place, and second, it

is also possible that those who do attend college do not finish or leave the area after graduation. While college degrees are not required for economic success, every study will show, and a cursory look at the data confirm, that higher levels of education strongly correlate with greater employment stability and higher earning potential. Increasing the share of college-educated residents in the TUAs will improve the economic metrics of the area as well. There are specific strategies that can be taken to improve educational attainment in the TUAs.

1. Create new partnerships and enhance existing ones with Miami-Dade College, Florida International University, the University of Miami, and trade schools to expand efforts to reach down into high schools serving the TUAs, and even middle schools, to build relationships with the students and create pathways to college enrollment or technical certification programs.
2. Identify what are the major impediments to college enrollment among the children in the TUAs, be they financial, job-related, or other, to devise solutions and target resources to solutions.
3. Identify the impediments among adults in the TUAs preventing them from returning to school for retraining or to pursue college degrees to devise solutions and target resources to overcome these barriers.

## VI. NEIGHBORHOOD TARGETED URBAN AREA SCORECARDS FOR BLACK-MAJORITY TUAS

This version of the scorecard, for 2024, includes the following variables, categorized according to the areas of focus identified in the ordinance.

### Jobs and Economic Development

1. **Median Household Income:** The benchmark is to have an increasing level of household income at a rate equal to, or greater than, the rest of the county.
2. **Per Capita Income:** The benchmark is to have an increasing level of per capita income at a rate equal to, or greater than, the rest of the county.
3. **Poverty:** The benchmark is to have the poverty rate falling, and at rate at least as fast as the rest of the county.
4. **Labor Force Participation:** The benchmark is to have an increasing level of labor force participation at a rate equal to, or greater than the rest of the county.
5. **Unemployment Rate:** The benchmark is to have the unemployment rate falling, and at rate at least as fast as the rest of the county.
6. **Health Care Coverage:** The benchmark is to have an increasing level of coverage at a rate equal to, or greater than, the rest of the county.
7. **Business Activity:** The benchmark is to have an increasing number of businesses in the TUAs, and growing at a rate equal to, or greater than, the rest of the county.
8. **Crime Reports:** The benchmark is to have the reported crime rates per thousand residents falling, and at rate at least as fast as the rest of the county.
9. **Police Arrests:** The benchmark is to have the reported number of arrests per thousand residents falling, and at rate at least as fast as the rest of the county.

### Housing

1. **Owner Occupied Units:** The benchmark is to have an increasing rate of owner occupancy and growth at a rate equal to, or greater than the rest of the county.
2. **Owner Occupied Black Households:** The benchmark is to have an increasing rate of owner occupancy specifically for Black households and growth at a rate equal to, or greater than the rest of the county.
3. **Median Home Values:** The benchmark is to have an increasing level of home values and growth at a rate equal to, or greater than, the rest of the county.
4. **Housing Vacancies:** The benchmark is to have a falling vacancy rate, and, at rate at least as fast as the rest of the county.
5. **Owner Affordability:** The benchmark is to have falling rates of cost burden among owner households, and, falling at rate at least as fast as the rest of the county.
6. **Renter Affordability:** The benchmark is to have falling rates of cost burden among renter households, and, falling at rate at least as fast as the rest of the county.

## Education

1. **Educated Adults:** The benchmark is to have an increasing share of the population 25-years of age and over with at least a high school diploma, and growth at a rate equal to, or greater than the rest of the county.
2. **Educated Young Adults:** The benchmark is to have an increasing share of the population 18-to-24-years of age enrolled in college, and growing at a rate equal to, or greater than the rest of the county.
3. **High School Graduates:** The benchmark is to have an increasing share of high school students graduate, and growth at a rate equal to, or greater than the rest of the county.
4. **Student Retention:** The benchmark is to have falling rates of student drop-outs, and, falling at rate at least as fast as the rest of the county.

The following pages present the scorecard for each of the Black-majority TUAs.

## Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend: ▲ Improving ▼ Deteriorating ■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

19. High School Graduates	Increase in the high school graduation rate	97.3%	106.6%	9.3%	▲	
20. Student Retention <sup>7</sup>	Decrease in the student dropout rate	145.5%	13.0%	-132.6%	▲	

**Legend:** ▲ Improving ▼ Deteriorating ■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend:		▲ Improving	▼ Deteriorating	No Change					

### Legend:

▲ Improving ▼ Deteriorating ■ No Change

### Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend: ▲ Improving ▼ Deteriorating ■ No Change

## Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend:

## Legend:

▲ Improving ▼ Deteriorating ■ No Change

## Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

### Legend:

▲ Improving ▼ Deteriorating ■ No Change

### Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend:

Legend: ▲ Improving ▼ Deteriorating ■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

**Legend:** ▲ Improving ▼ Deteriorating ■ No Change

### Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend: ▲ Improving ▼ Deteriorating ■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## Legend:

▲ Improving ▼ Deteriorating

■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend:			▲ Improving		▼ Deteriorating					

## Legend:

▲ Improving ▼ Deteriorating ■ No Change

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

## South Miami

Criteria/Indicators	Scoring Benchmark	Ratio to the Rest of the County			
I. Jobs/Economic Development		2017 <sup>2</sup>	2022	2017-2022 Change <sup>4</sup>	Change Trend
1. Median Household Income <sup>1</sup>	Increase in the median household income	67.2%	53.2%	-14.0%	▼
2. Per Capita Income	Increase in per capita income	74.9%	81.9%	7.0%	▲
3. Poverty	Falling poverty rate	167.2%	207.6%	40.5%	▼
4. Labor Force Participation	Growth in labor force participation	95.2%	82.7%	-12.5%	▼
5. Unemployment Rate	Decrease in the unemployment rate	301.4%	131.7%	-169.7%	▲
6. Health Care Coverage	Growth in share of covered population	97.5%	99.9%	2.5%	▲
7. Business Activity	Growth in number of businesses	0.3%	0.5%	0.2%	▲
8. Overall Crime Reported	Decrease in the overall crime rate per 1,000 of population	439.9%	616.3%	176.4%	▼
9. Police Arrests	Decrease in Police Arrests per 1,000 of populaiton	442.3%	430.5%	-11.8%	▲
II. Housing <sup>6</sup>					
10. Owner-occupied Units	Growth in share of owner-occupied housing units	61.9%	63.7%	1.8%	▲
11. Owner-occupied: Black Households	Increase in owner occupancy by race	98.4%	113.6%	15.2%	▲
12. Median Home Values <sup>1</sup>	Rising median home values	121.5%	114.3%	-7.2%	▼
13. Housing Vacancies	Falling vacancy rate	181.3%	142.4%	-39.0%	▲
14. Owner Affordability	Decrease in cost-burdened owner households	90.1%	143.6%	53.4%	▼
15. Renter Affordability	Decrease in cost-burdened renter households	89.9%	131.9%	42.0%	▼
III. Education					
17. Educated Adults	Increase in pop. 25+ with high school diploma/college degree	104.4%	100.2%	-4.3%	▼
18. Educated Young Adults	Increase in population 18-24 enrolled in college	95.4%	89.0%	-6.4%	▼
19. High School Graduates	Increase in the high school graduation rate	108.2%	108.1%	0.0%	▲
20. Student Retention <sup>7</sup>	Decrease in the student dropout rate	47.6%	27.9%	-19.7%	▼

Legend: ▲ Improving ▼ Deteriorating ■ No Change

### Notes:

1. The median household income and the median home values are estimated from the aggregate pooled household income data.
2. Dollar Values are expressed in 2022 dollars.
3. Data for the rest of the county excludes all TUAs.
4. The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
5. This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
6. An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
7. The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.

Legend:		▲ Improving    ▼ Deteriorating    No Change							

### Legend:

▲ Improving ▼ Deteriorating

■ No Change

### Notes:

- The median household income and the median home values are estimated from the aggregate pooled household income data.
- Dollar Values are expressed in 2022 dollars.
- Data for the rest of the county excludes all TUAs.
- The changes for shares or rates expressed as percentages are shown as the numerical difference between the values, not a percent change.
- This trend compares the change in each variable in the TUA with the change in the rest of the county. If a TUA is improving, but not as much as the rest of the county, then this trend will be negative.
- An "n/a" in a cell indicates the value was not available, most likely due to a very small sample size.
- The student graduation and dropout rates are calculated from the weighted average of all traditional public high schools serving the TUA area.
