DORAL FLORIDA FACILITY FIRE

PRELIMINARY AIR MONITORING

SUMMARY

Doral, Florida

07:00 March 28 - 07:00 March 29, 2023

Project #025114

1.0 INTRODUCTION

On February 16, 2023, Covanta Energy requested that CTEH®, LLC provide air monitoring and air sampling support in response to a fire at a Covanta Energy facility in Doral, Florida. CTEH® personnel mobilized to the incident site and began real-time air monitoring in the surrounding community at approximately 0800 Eastern Standard Time (EST) February 17, 2023. This report summarizes the real-time air monitoring data collected from 0700 EST March 28 to 0700 EST March 29, 2023.

2.0 AIR MONITORING AND SAMPLING METHODS

Real-time air monitoring refers to the use of direct-reading instruments to provide a near-instantaneous readout of a chemical concentration in air. CTEH® personnel developed and implemented an Air Sampling and Analysis Plan (SAP), which was reviewed by the U.S. EPA Region 4 On-Scene Coordinator (EPA Region 4 OSC) and other members of Incident Command, to characterize the nature and extent of emissions from the fire. During this reporting period, CTEH personnel conducted real-time air monitoring in accordance with the Community Monitoring plan outlined in the SAP. Community Monitoring was conducted in the residential and commercial locations surrounding the incident site, not necessarily occupied by members of the community. All Community Monitoring was conducted at a height representative of the breathing zone.

During this reporting period, CTEH® personnel conducted handheld real-time air monitoring for carbon monoxide (CO), hydrogen sulfide (H_2S), hydrogen cyanide (HCN), atmospheric flammability measured as a percentage of the lower explosive limit (%LEL), particulate matter less than 2.5 microns ($PM_{2.5}$), and volatile organic compounds (VOCs). Real-time air monitoring was conducted using RAE Systems by Honeywell MultiRAE, TSI DustTrak, and TSI SidePak AM520 handheld instruments.

CTEH personnel also deployed stationary radio-telemetering real-time air monitoring instruments (RAE Systems by Honeywell AreaRAE instruments) at four fixed locations. AreaRAE instruments were used to monitor for CO, H_2S, %LEL, HCN, and VOCs every 15 seconds. In addition, four TSI SidePak AM520 instruments were deployed, co-located with AreaRAE instruments, to log $PM_{2.5}$ data.

Please note that, in addition to fire smoke, automobile exhaust is another source of particulate matter that is detectable on $PM_{2.5}$ instrumentation. $PM_{2.5}$ in exhaust from cars and trucks onsite during response activities and on nearby roads may be associated with momentary elevated $PM_{2.5}$ readings. $PM_{2.5}$ instruments can also overstate $PM_{2.5}$ levels during humid weather conditions.

To supplement real-time air monitoring, analytical air samples were collected at discrete locations around the incident site, co-located with AreaRAE instruments. Samples were collected for asbestos, polynuclear

aromatic hydrocarbons, and metals. All samples will be shipped under chain-of-custody to Pace Analytical, an American Industrial Hygiene Association-accredited laboratory for analysis.
