2011

Jobs Created/Supported:

Estimated at 00

This project is being funded through the American Recovery and Reinvestment Act of 2009

For more information, Call the Florida Department of Transportation District Six Public Information Office at:
800-435-2300

Project Summary

This roadway capacity improvement project will provide for the construction of a new raised landscaped median in Ponce de Leon Boulevard for a distance of eight (8) City blocks, including new turning bays for left turn movements where none previously existed. The existing on-street angle parking will be converted to parallel parking allowing for the new street cross section to include the 14-foot wide median. New curb bump-outs will be installed at the intersections to provide for improved bus access and

safer operation of the City's shuttle bus system.

History

The project lies entirely within the City's Business District and will add eight (8) new blocks of roadway improvements to this main collector roadway. The new improvements will be similar to the improvements constructed two years ago along this same corridor for the seven (7) block segment immediately south of this project.

Project Support (as of 3/17/09)

Ponce de Leon Boulevard serves as the main roadway collector for the City of Coral Gables Business District. In addition, the City owns and operates a shuttle bus system known as the Coral Gables Trolley where Ponce de Leon Boulevard serves as the primary route for this service. The Coral Gables Trolley transports over 5,000 passengers per day, five days a week, and connects the Douglas Road Metrorail Station with the main shopping hubs of the Village of Memick Park and Miracle Mile, terminating at S.W. 8th Street where

there are several connections to bus lines operated by Miami-Dade Transit. The project also includes safety enhancements for passengers boarding the City's shuttle bus system.
