

This map is for use in administering the National Flood Insurance Program. It is not intended to be used for any other purpose. The map is not to be construed as a warranty, representation, or guarantee of any kind. The map is not to be used for any purpose other than the one for which it was prepared. The map is not to be used for any purpose other than the one for which it was prepared. The map is not to be used for any purpose other than the one for which it was prepared.

Coastal Base Flood Elevations shown on this map apply only to landward of the National Geospatial Virtual Datum of 1929 (NGVD 29). Users at this FRM will find the Flood Insurance Study (FIS) for the Silver River Watershed in the Flood Insurance Study for this jurisdiction. Elevations shown in the Summary of Silver River Watershed should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on the FRM.

Common structures listed in Section 2-4 "Flood Protection Measures" of the Flood Insurance Study report for information of flood control structures for this jurisdiction.

The projection used in the preparation of this map was Florida State Plane east datum. The datum for the elevation of the structure is the same as the datum for the FEMA for adjacent jurisdictions may result in slight positional differences for the structure locations. These differences do not affect the accuracy of this FIRMs.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1920. These flood elevations must be compared to structure and ground elevations. The vertical datum conversion between the National Geodetic Vertical Datum of 1920 and the North American Vertical Datum of 1988, visit the National Geographic Survey at the following address:

<http://www.ngs.noaa.gov/g700/index.html>

For more information: Visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/>.

The map is not to be used for any purpose other than the administration of the National Flood Insurance Program. The map is not to be used for any purpose other than the administration of the National Flood Insurance Program.

Coastal Base Flood Elevations shown on this map apply only landward of the National Geospatial Virtual Datum of 1029 (NGVD 29). Users at this FRM will find Coastal Base Flood Elevations in the Flood Insurance Study (FIS) Silverwater Elevation tables in the Flood Insurance Study for this jurisdiction. Elevation shown in the Summary of Silverwater Elevations shall be used for construction and/or floodplain management purposes when they are higher than the elevations shown on the FRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cities sections. The floodways were based on hydraulic computations from the FIS Silverwater Elevation tables. Floodway boundaries, floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Common structures listed in Section 2.4 "Food Projection Measures" of the Flood Insurance Study report for information of food control structures for this jurisdiction.

The projection used in the preparation of this map was Florida State Plane east datum, 1983. The datum is the mean sea level of the Gulf of Mexico. The differences in land, sphere, projection or State Plane zones used in the production of FEMA for adjacent jurisdictions may result in slight positional differences at the jurisdiction boundaries. These differences do not affect the accuracy of this FIRMs.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations on the same datum. For more information regarding the conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey at www.ngs.noaa.gov/DAVD83/DAVD83.html or contact the National Geodetic Survey at the following addresses:

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

Zone A: 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in a given year. This Special Flood Hazard Area is the portion of the community that is subject to inundation by the 1% annual chance flood.

Zone AE: No base flood elevation determined

Zone A1: Base Flood Elevation determined

Zone A2: Flood depths of 1 to 3 feet (lowest areas of ponding). Some Flood Elevations determined.

Zone A3: Flood depths of 1 to 3 feet (usually used flow on sloping areas), average Flood Elevations determined.

FLOODWAY AREAS IN ZONE A*

Roadways are the conduit of a stream plus any adjacent floodplain areas that must be kept in good condition so that, in the annual chance flood, no flow can be carried without substantial increase in flood stage.

ZONE X

OTHER FLOOD AREAS

Areas of 0.2% annual chance flood, areas of 1% annual chance flood with a 10 year return period, or areas predicted by laws from 1% annual chance flood.

ZONE B

OTHER AREAS

Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are understood, but possible.

ZONE D

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

NORMALLY PROTECTED AREAS (NPAs)

*Zone A and Zone B are normally located within or adjacent to Special Flood Hazard Areas.

Floodplain boundary
 Roadway boundary
 Zone D boundary
 CBRS and OPA boundary

Figure 1: A schematic diagram of a cross-section of a river channel and its surrounding floodplain. The diagram shows a central river channel with a cross-section line labeled "Cross section line" and a transect line labeled "Transect line". The river channel is labeled "River channel" and "River channel bed". The floodplain is labeled "Floodplain" and "Floodplain bed". The diagram also shows a "Base Flood Elevation" line and a "Base Flood Elevation value" label. The diagram is labeled "Figure 1" and "Figure 1: A schematic diagram of a cross-section of a river channel and its surrounding floodplain."

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

Zone A: 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in a given year. This Special Flood Hazard Area is the portion of the community that is subject to inundation by the 1% annual chance flood.

Zone AE: No base flood elevation determined

Zone A1: Base Flood Elevation determined

Zone A2: Flood depths of 1 to 3 feet (lowest areas of ponding). Some Flood Elevations determined.

Zone A3: Flood depths of 1 to 3 feet (usually used flow on sloping areas), average Flood Elevations determined.

Figure 1: A schematic diagram of a cross-section of a river channel and its surrounding floodplain. The diagram shows a central river channel with a cross-section line labeled "Cross section line" and a transect line labeled "Transect line". The river channel is labeled "River channel" and "River channel bed". The floodplain is labeled "Floodplain" and "Floodplain bed". The diagram also shows a "Base Flood Elevation" line and a "Base Flood Elevation value" label. The diagram is labeled "Figure 1" and "Figure 1: A schematic diagram of a cross-section of a river channel and its surrounding floodplain."

● M1.5

geographic coordinates referenced to the North American Datum of 1983 (NAD 83). Wetland boundaries are based on National Wetlands Inventory maps, 1:50,000 scale. Vertical datum is Mean High Water, 100-year flood stage. Profile stars coordinate system. Base zone (P925C/E) 00A11. Transverse Mercator projection.

Beaver Creek, Lake Umbagog in Notes to Users section of this River Mile.
