INTRODUCTION

On December 19, 2011 the Board of County Commissioners adopted new geographic boundaries for the thirteen County Commission Districts in Miami-Dade. This marked the end of a vast collaborative effort, the third redistricting process in the history of Miami-Dade County since 1990. District boundaries had to be redrawn to ensure equal representation of voters of all population groups in the County's diverse demographic makeup, in line with legally established redistricting criteria. This publication is intended to provide a socio-economic portrait of the commission districts in effect since December 2011, using data at the smallest level of geographic detail available. The following demographic and housing data is based on Census 2010, Summary File 1, at block level while the socio-economic data is derived from 2006-2010 American Community Survey Five-Year Estimates at block group level. The appendix to this report contains 41 tables and provides very detailed data on a multitude of topics.

DEMOGRAPHIC CHARACTERISTICS

Total Population

Upon completion of the redistricting process, the County’s total population of 2,496,435 persons was relatively evenly distributed among the new commission districts. District 8 and District 5 were the most populous, each representing 8.1 percent of the County’s total population, with 201,479 and 201,477 persons respectively. The smallest, in terms of population, was District 2, with 182,592 persons or 7.3 percent of the total population in Miami-Dade (See Figure 1 below and Table 1 in the Appendix).

2010**

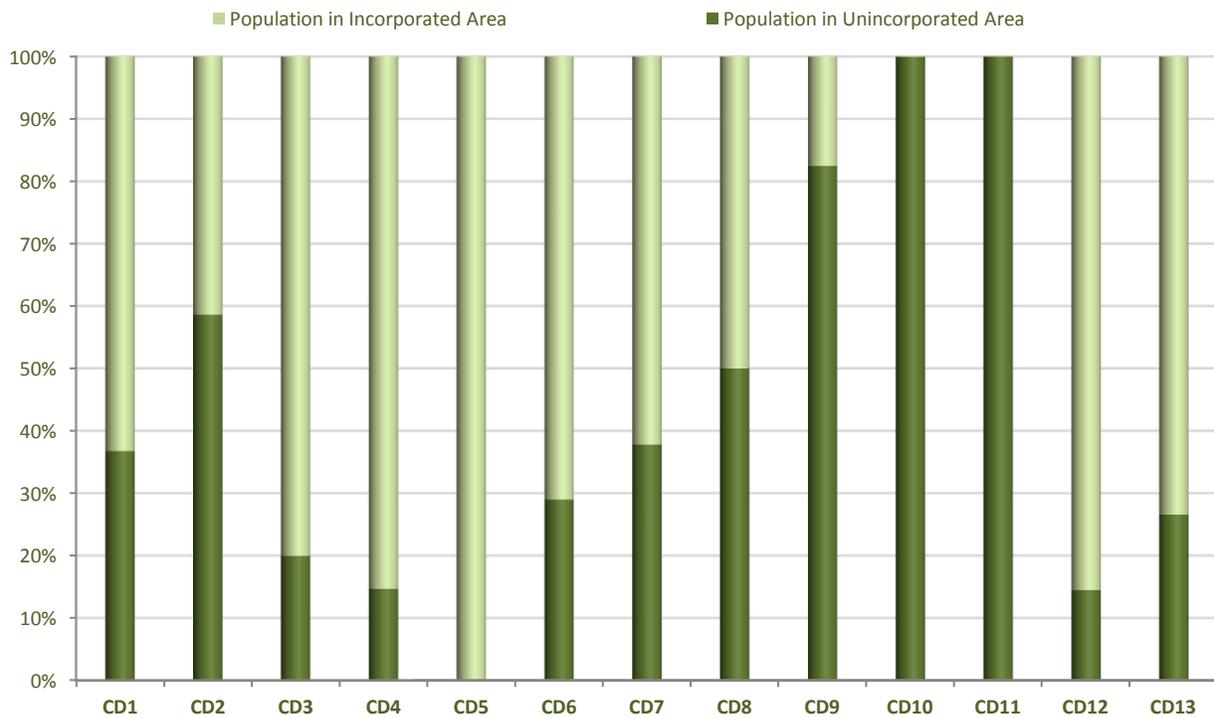

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Population by Incorporation Status

Most commission districts include incorporated and unincorporated areas. The exception is District 11 whose geographic boundary and population fall entirely within unincorporated Miami-Dade County. Its population represents 18.2 percent of the County population living in unincorporated area. The population of District 10 is also nearly wholly within the unincorporated area. In contrast, District 5 has 99.9 percent of its population residing within municipal boundaries. It has 14.4 percent of the total population living in the incorporated area (see Figure 2 and Table 1 in the Appendix).

2010

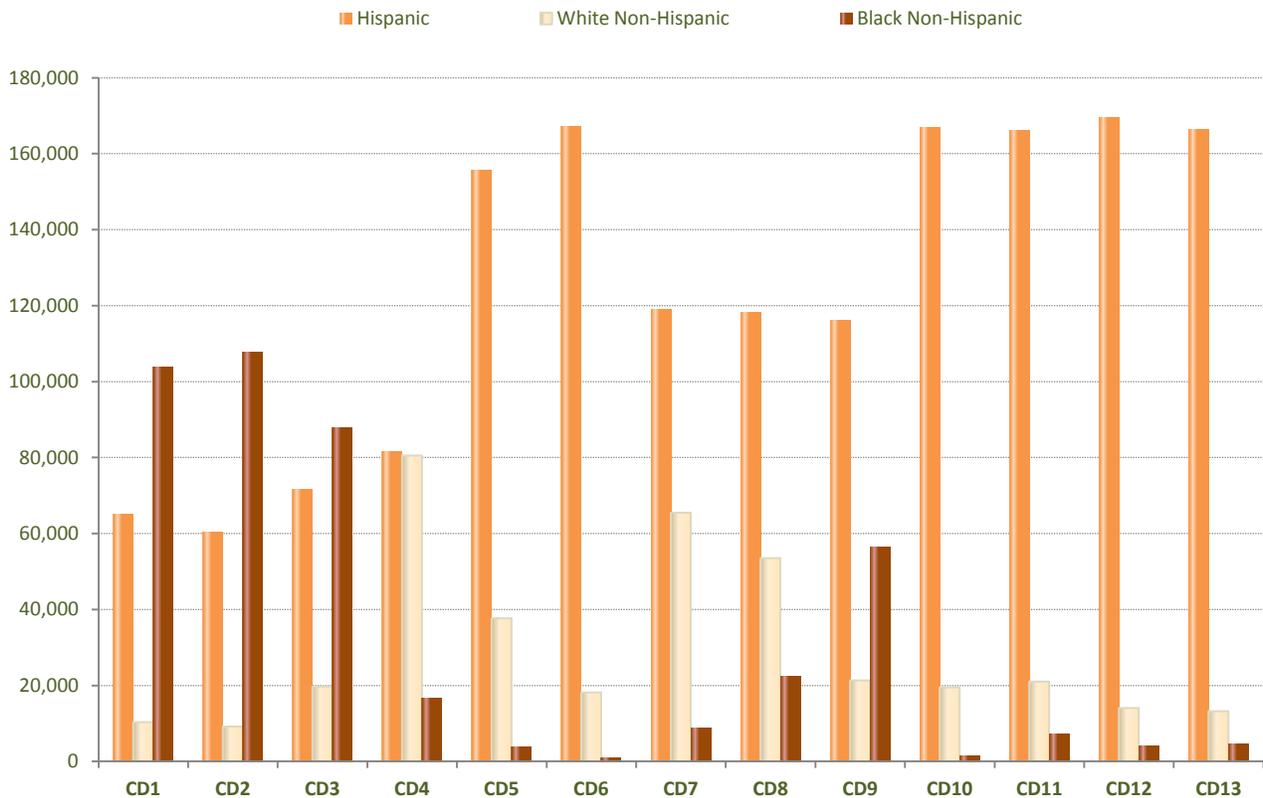

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Race and Ethnicity

All commission districts within the County have at least 30 percent of their population that is Hispanic. In nine of the commission districts at least 50 percent of the residents are Hispanic. In the remaining districts, three are majority non-Hispanic Black, specifically Commission Districts 1, 2, and 3. While Commission District 4's population is about evenly split between non-Hispanic White and Hispanic. In regard to districts with a particularly high percentage of Hispanic residents, Commission Districts 6, 10, 11, 12, and 13 have rates of between 83.0 and 89.3 percent (see Figure 3 below, and Table 3 in the Appendix).

Miami-Dade County, FL
2010

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Age

The working age population, from 18 to 64 years, represents a similar proportion of the population in all districts. It ranges from a low of 62.3 percent in District 10 to a high of 68.1 percent in Commission District 5 (see Figure 4 below). There is, however, a much greater variation for persons less than 18. Commission District 9 has the highest proportion of children at 28.1 percent, while Commission District 5 has the lowest at 14.7 percent. At the other end of the age spectrum, persons 65 and over, the district with the highest percentage of elderly persons is Commission District 6, at 20.4 percent. District 9, that had the highest percentage of children, has the lowest percentage of elderly persons at 9.3 percent (see Tables 5 and 6 in the Appendix).

Percent of children vary noticeably by commission district.

ECONOMIC CHARACTERISTICS

Educational Attainment

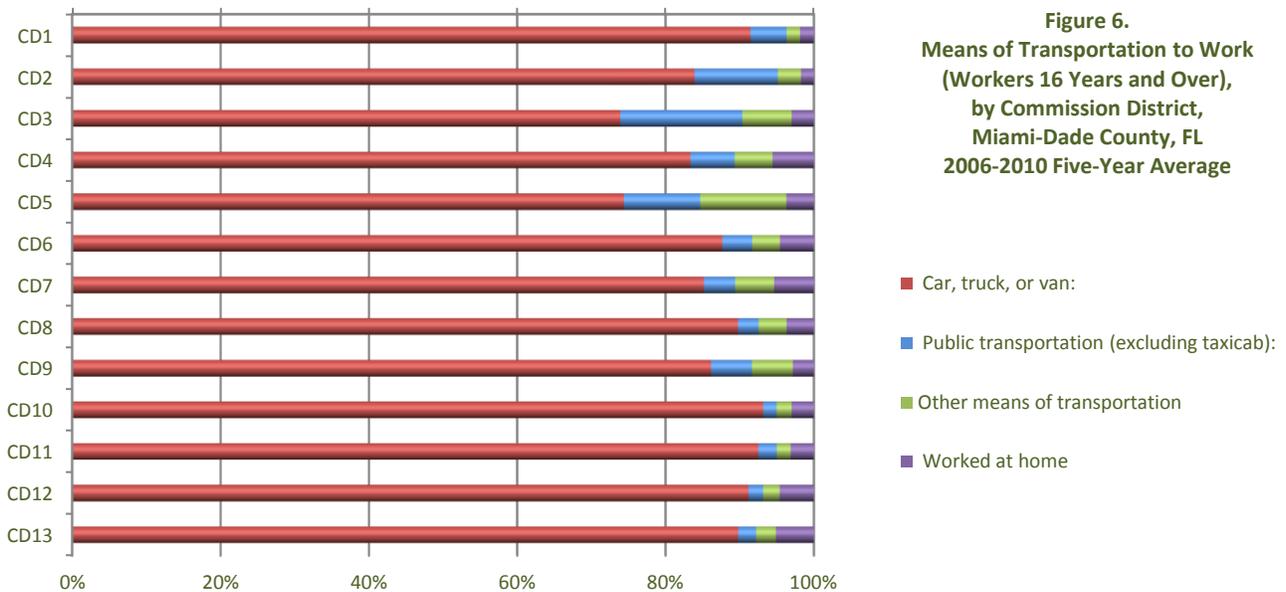

The two categories of educational attainment that are closely associated with income earning potential are persons with less than a high school diploma at the low end of income and those persons with a Bachelor’s and above at the high end of the income spectrum. Commission Districts 4 and 7 have the highest rates of persons 25 and over with at least a Bachelor’s degree. In Commission District 4, 41.6 percent of this population has attained that level of education, while in the latter district this figure is even higher at 49.9 percent. At the lower end of educational attainment, less than a high school diploma, Commission Districts 2, 3, and 5 have rates of 30.7, 34.4, and 30.6 percent, respectively. (See Tables 9 and 10 in the Appendix).

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates, Block Group data. Prepared by Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Transportation to Work

The primary means of travel to work is by cars and trucks. In fact, countywide over 86 percent of the trips are by motor vehicle. In Commission District 10 this jumps to over 93 percent of residents use cars and trucks to get to work, while in District 3, the lowest percentage, at 74 percent use this means of travel. The next most common means of travel to work is by public transportation. However, only 5.5 percent of workers use public transit to travel to work. In only three Districts 2, 3, and 5, that are centrally located, does this percentage rise above 10 percent. In Commission District 3 16.5 percent of workers use this means of travel. Only in District 5 is walking to work somewhat common at 7.4 percent. Finally, in Commission Districts 4 and 7 over 5 percent worked at home. (See Figure 6 below, and Table 14 in the Appendix).

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates, Block Group data. Prepared by Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Households

The commission districts with the greatest number of households are District 5 followed by District 4 and District 7, in that order. Since the population of all districts is in a narrow range, the explanation for the higher number of households in the above districts lies in household type.

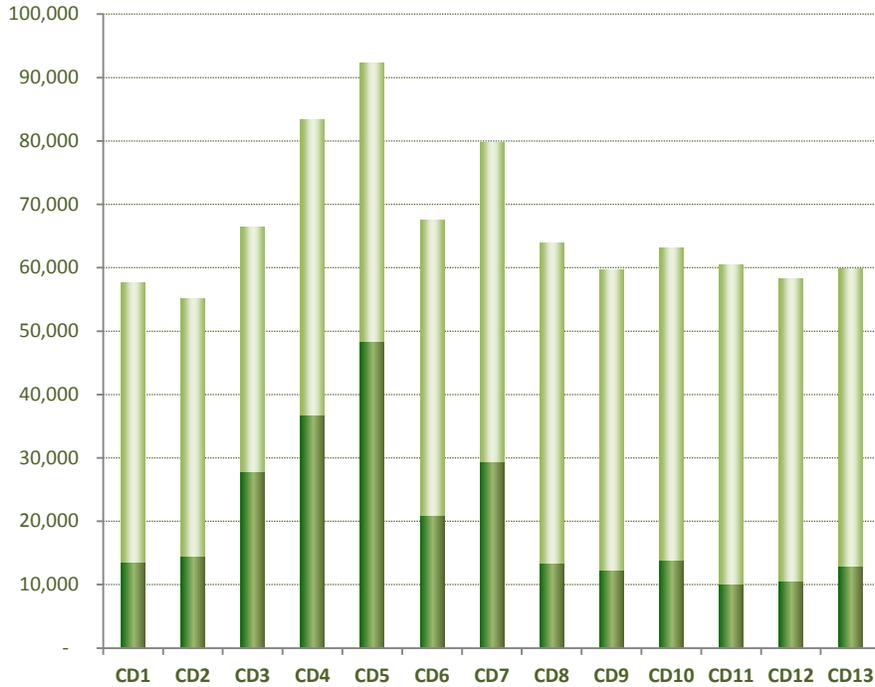

Figure 7.
Households by Type,
by Commission District,
Miami-Dade County, FL
2010

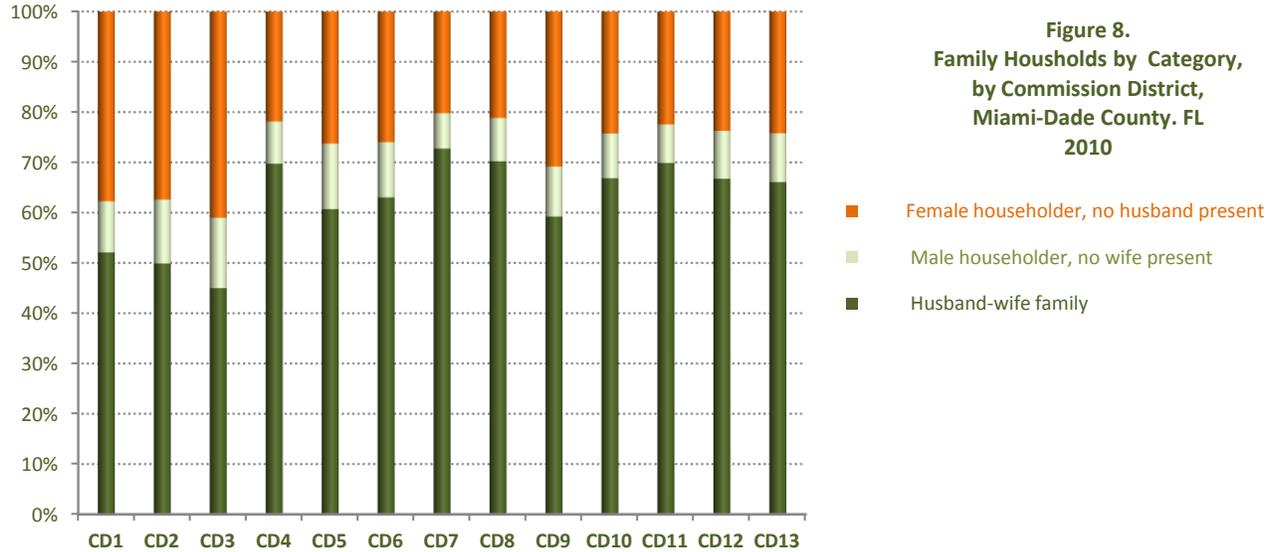

■ Family households
■ Nonfamily households

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Household Type

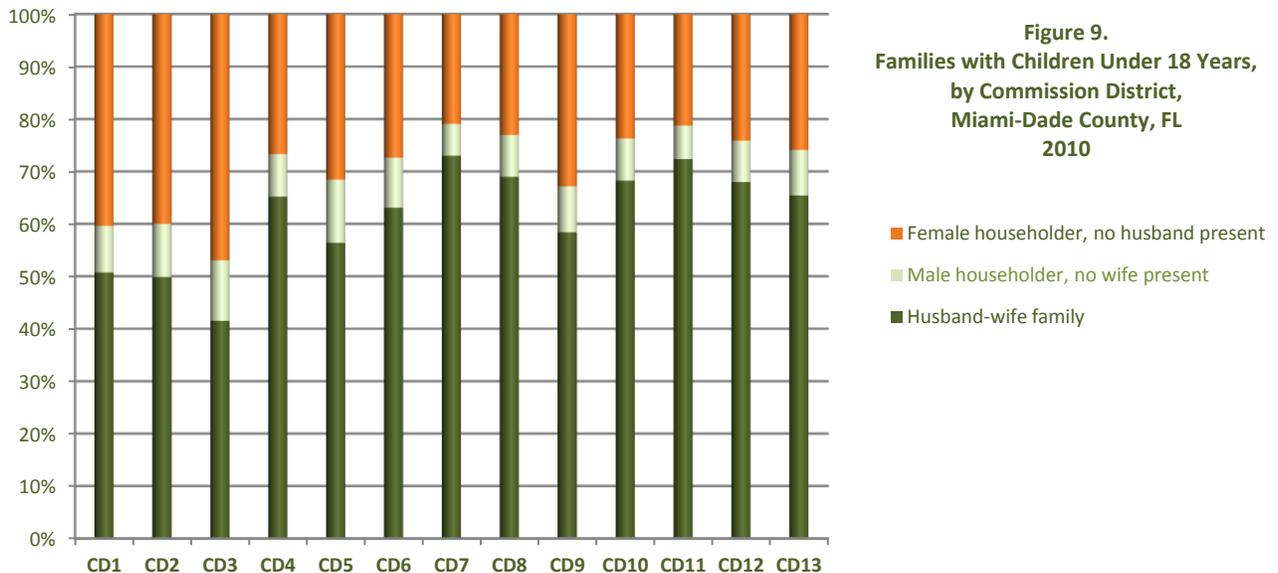

Household structure varies from one district to another. Family households are predominant in all districts except for District 5. Commission District 7 has the highest number of family households, with a total of 50,386. However, District 11 has a higher percentage of family households, at 83.3 percent. On the other side of the spectrum, Districts 5, 4 and 7 have a high percentage of nonfamily households that are typically smaller. In fact, in Commission District 5 over half of the households are of the nonfamily type. (See Figure 7 above, and Table 20 in the Appendix).

Families are the most important household type in all commission districts, except for District 5.

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Overall, married couples are the most common type of family households. In all districts, with the exception of Commission District 2 and 3, married couples represent at least 50 percent of family households. Commission District 3 has the lowest percentage of family households composed of married couples, at 45.0 percent. It also has the highest percentage of single female householders at 41.0 percent. Of these households, over half have children under 18 years. (See Figure 9 below, and Table 20 in the Appendix).

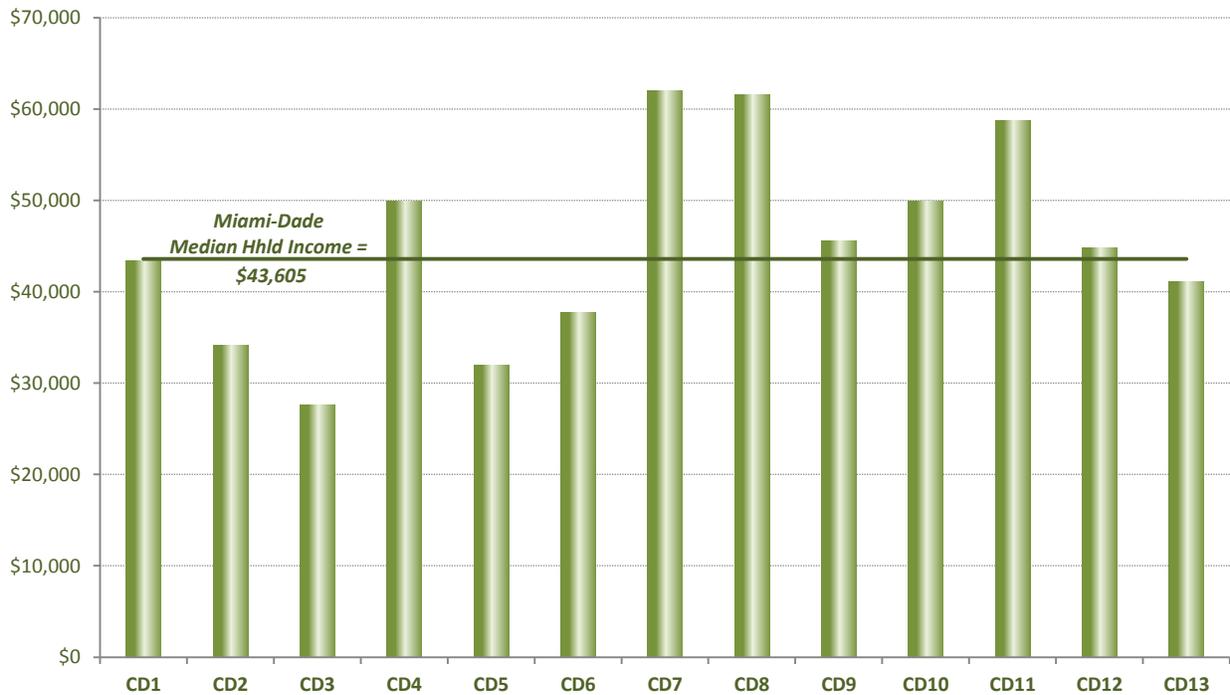

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Household Income

Commission Districts 7 and 8 have the highest median household income in the County at just under \$62,000, while District 3 has a median household income of approximately \$28,000 (see Figure 10). In terms of distribution by income range, not surprisingly, District 2 has the highest percentage of households with an income of less than \$10,000. On the other hand, Commission District 7 that has the highest median household income also has the highest percentage of households with income of \$100,000 and above, at 32.6 percent. (See Table 17 in the Appendix).

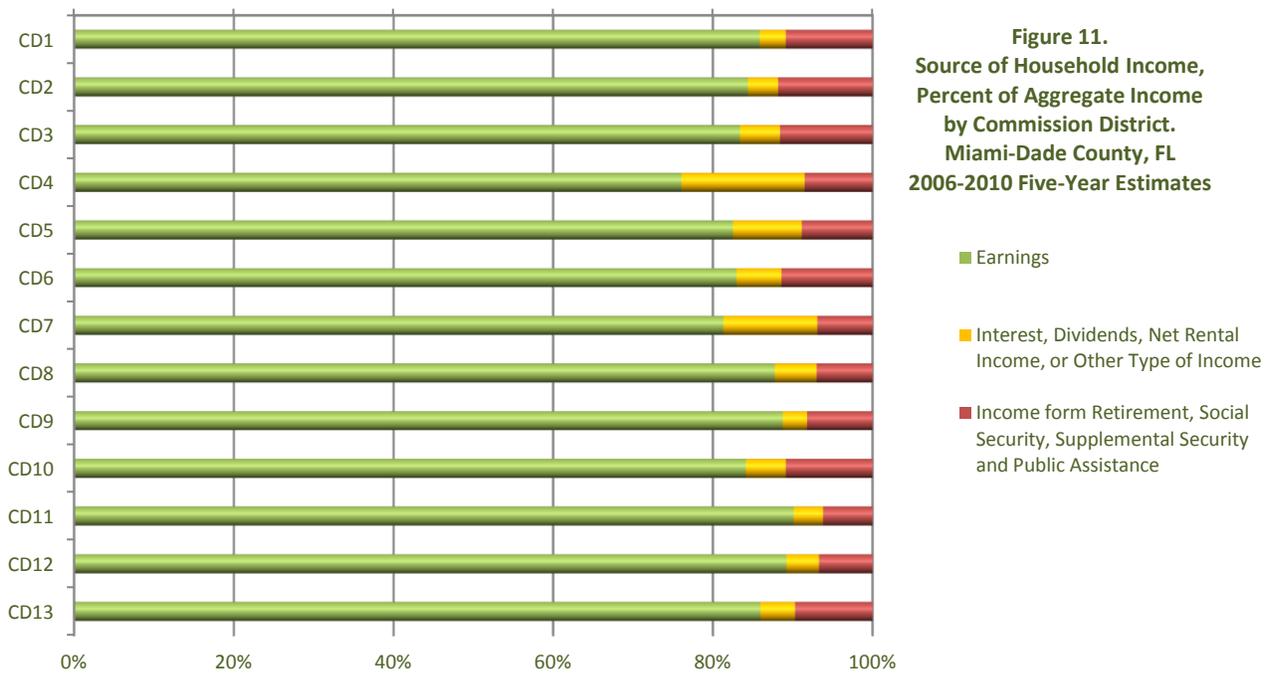

Figure 10.
Median Household Income by Commission District,
(in 2010-Inflation Adjusted Dollars),
Miami-Dade County, FL

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates, Block Group data. Prepared by Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Household Income by Source

The largest component of aggregate household income is earnings that include wages and self-employment income. In the County over 84 percent of income is from this source. There are notable differences among commission districts. Commission District 11 has the highest percentage of income from wages, at 90.1 percent, while District 4 has the lowest figure, at 76.0 percent. Despite having the lowest percentage of income derived from wages, this component in Commission District 4 represents 11.1 percent of total wage income in the County. (See table 19 in the Appendix).

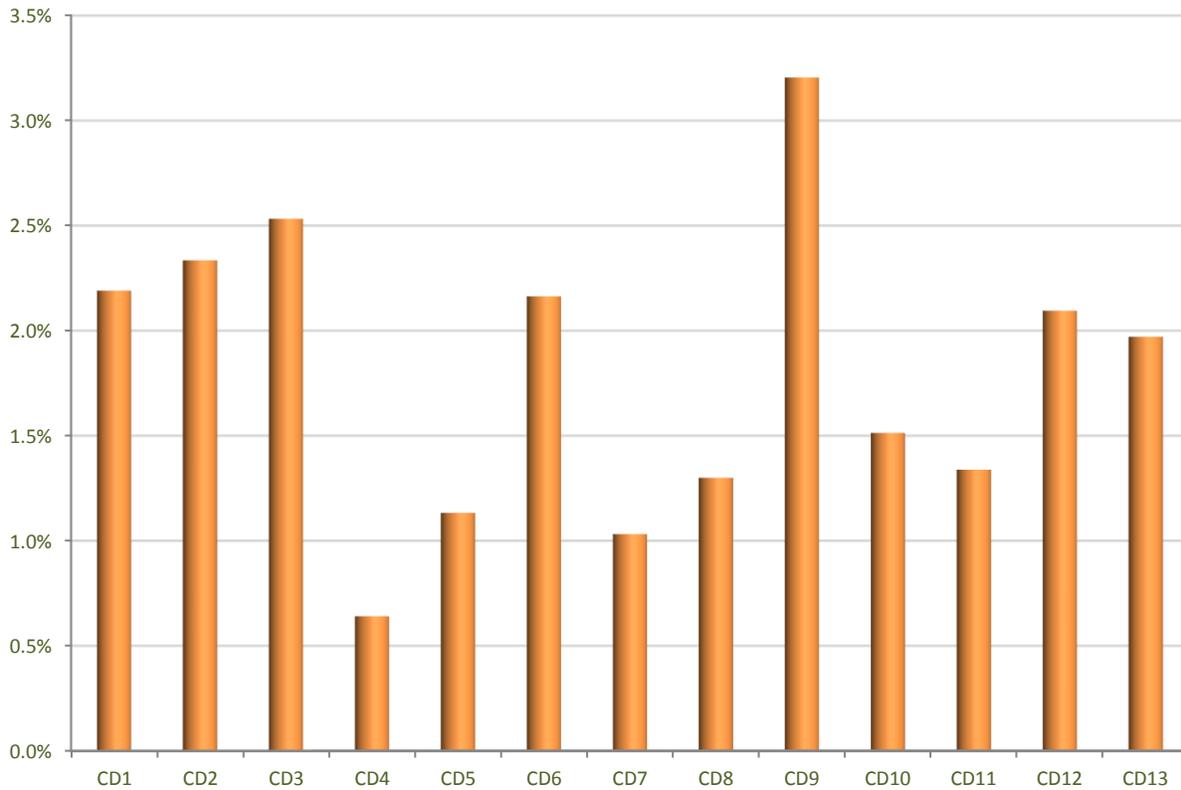

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates, Block Group data. Prepared by Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Interest, dividends and rental income are the second largest income category in the County representing about 5.5 percent of total household income; this is followed by Social Security income with almost the same percentage. Interest, dividends and rental income as a percent of total income vary considerably from a low of 1.1 percent in District 9 to a high of 13.6 percent in District 4. Social Security income varies among commission districts, but within a relatively narrow range. Retirement income (other than Social Security) is 2.6 percent of total household income in the County. Households in Commission District 7 receive 17 percent of retirement income countywide. Finally, it should be noted that Public Assistance is a very small percentage of aggregate household income in the County, at less than 0.1 percent. It is highest in numerical and percentage terms in Commission District 9. (See Figure 11 above and Table 19 in the Appendix).

Public Assistance

In over half the commission districts at least 2 percent of the households receive public assistance. District 9, has the highest percentage of households receiving public assistance at 3.2 percent. This is substantially higher than the County average of 1.7 percent. District 4 has the fewest households receiving public assistance at 0.6 percent (see Figure 12 below and Table 18-B in the Appendix).

Figure 12.

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-Year Estimates, Block Group data. Prepared by Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Poverty

All commission districts, with the exception of District 11, have a rate for persons in poverty that exceeds 10 percent. (See Figure 13 below and Table 17 in the Appendix). The poverty rate is lowest in District 11, at 8.6 percent. The highest percent of persons living below the poverty line is in District 3, at just under 34 percent, almost twice the County average of 17.2 percent. Consistent with this high poverty rate for persons is that the household poverty rate for families with female householders is highest in District 3, at 41.5 percent. (See Tables 21 through 24 in the Appendix).

Families with Children in Poverty

Poverty is affecting families with children in Miami-Dade, and more so in mono-parental families. The situation seems pervasive in families with female householder, no husband present, with related children under 18 years. Within this group, 35.1 percent live below poverty line countywide. In eight of the thirteen commission districts, this percentage is higher than the county's average, District 3 showing the highest figure of 58 percent. (See Figure 14 below, and Table 24 in the Appendix).

HOUSING CHARACTERISTICS

Tenure

In three commission districts more than 70 percent of households live in owner occupied housing units. They are Districts 8, 10, and 11 with rates of 70.3, 70.3, and 72.7 percent respectively. At the low end of owner occupancy, Commission Districts 3 and 5 have rates of 32.9 and 30.3 percent respectively. (See Table 31 in the Appendix).

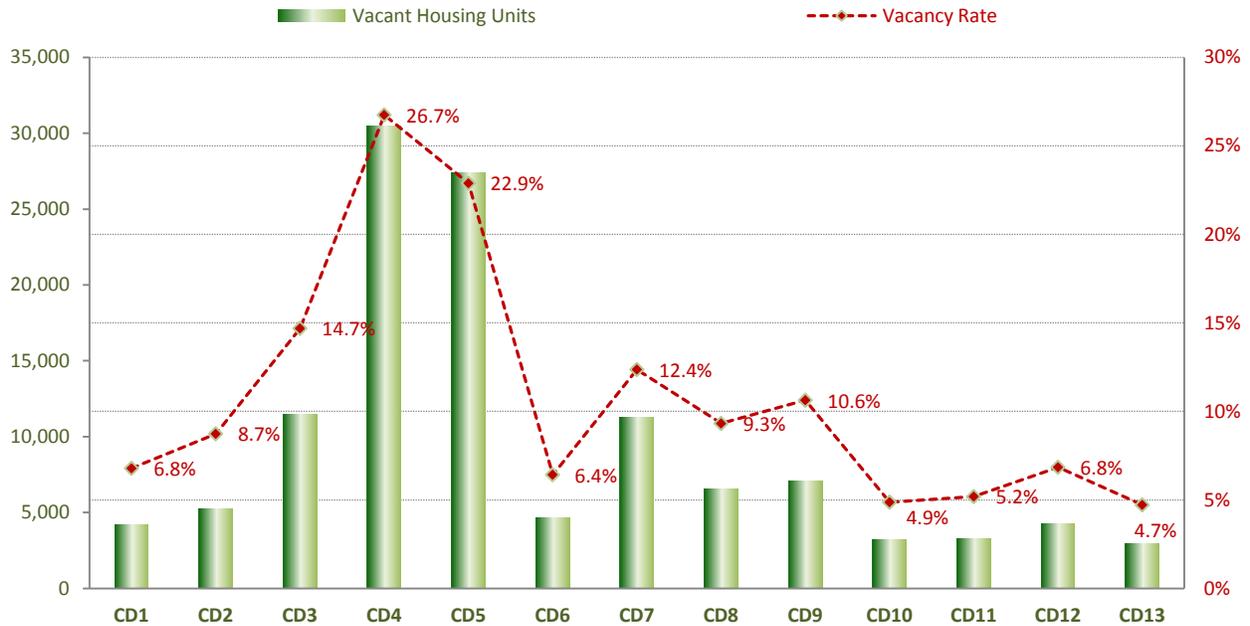

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Vacancy

With the countywide average at 12.3 percent, vacancy rates vary greatly among the thirteen commission districts. Commission Districts 4 and 5 have very high rates of 26.7 and 22.9 percent respectively. At the low end of vacancy rates, Commission Districts 10, 11, and 13 have rates between 4.7 and 5.2 percent. (See Figure 16 below and Table 32 in the Appendix).

Miami-Dade County, FL
2010

Source: U.S. Census Bureau, Census 2010, Summary File 1, Miami-Dade County, Department of Sustainability, Planning and Economic Enhancement, Research Section, 2012.

Cost-Burdened Households

Housing costs absorb a significant portion of the household income in Miami-Dade where every second household with a mortgage is considered cost-burdened. The situation is even worse for renters, with 51.8 percent cost-burdened renters countywide, and reaching the highest of 55.5 percent in District 12. Typically, cost-burdened households spend 35 percent or more of their income on mortgage, rent, insurance or other related housing expenses. The largest proportion of cost-burdened households with a mortgage is in District 2, at 58.9 percent. The housing cost is also affecting households without a mortgage, particularly those in Districts 4, 3, 2 and 6 exceeding the 22.8 percent County's average for cost-burdened owners without a mortgage. (See Figures 17 and 18 below, and Tables 40 and 41 in the Appendix).

* Earnings are defined as the algebraic sum of wage or salary income and net income from self-employment. Earnings represent the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.. The above table provides estimates of aggregate self-employment income by commission district.

Note: For privacy reasons data for several block groups has been suppressed by the U.S. Census Bureau. The above estimates by commission district are based on available data and may not add to the County's total.
