APPENDIX D: TRAFFIC

Introduction

The purpose of this traffic memorandum is to provide traffic analysis documentation of the proposed transit system improvements along the existing Busway which runs parallel to U.S. 1.

The traffic operational analysis is preformed using Synchro 9 traffic signal optimization software and VISSIM Version 10 micro-simulation software. The analysis was conducted for year 2018 for Existing, No-build and Build conditions. The primary focus of the evaluation is to quantify transit operations improvements, in terms of traffic operations, and arterials impacts, if any.

Existing Traffic counts

A data collection effort was conducted to evaluate the existing conditions for the U.S. 1 corridor. The traffic counts were collected along U.S. 1 from SW 128th Street to SW 160th Street. The counts were collected in June 2018 and July 2018.

The study area AM and PM peak hours were selected by identifying the four highest-volume consecutive 15-minute periods in the morning and evening at each count location over a three-day period (Tuesday through Thursday). The AM peak hour occurs from 8:00 AM to 9:00 AM and the PM peak occurs between 5:00 PM to 6:00 PM. **Figures 1** and **2** summarize the AM and PM peak hour volumes.

Figure 1: Existing 2018 PM Peak Hour Traffic Volumes

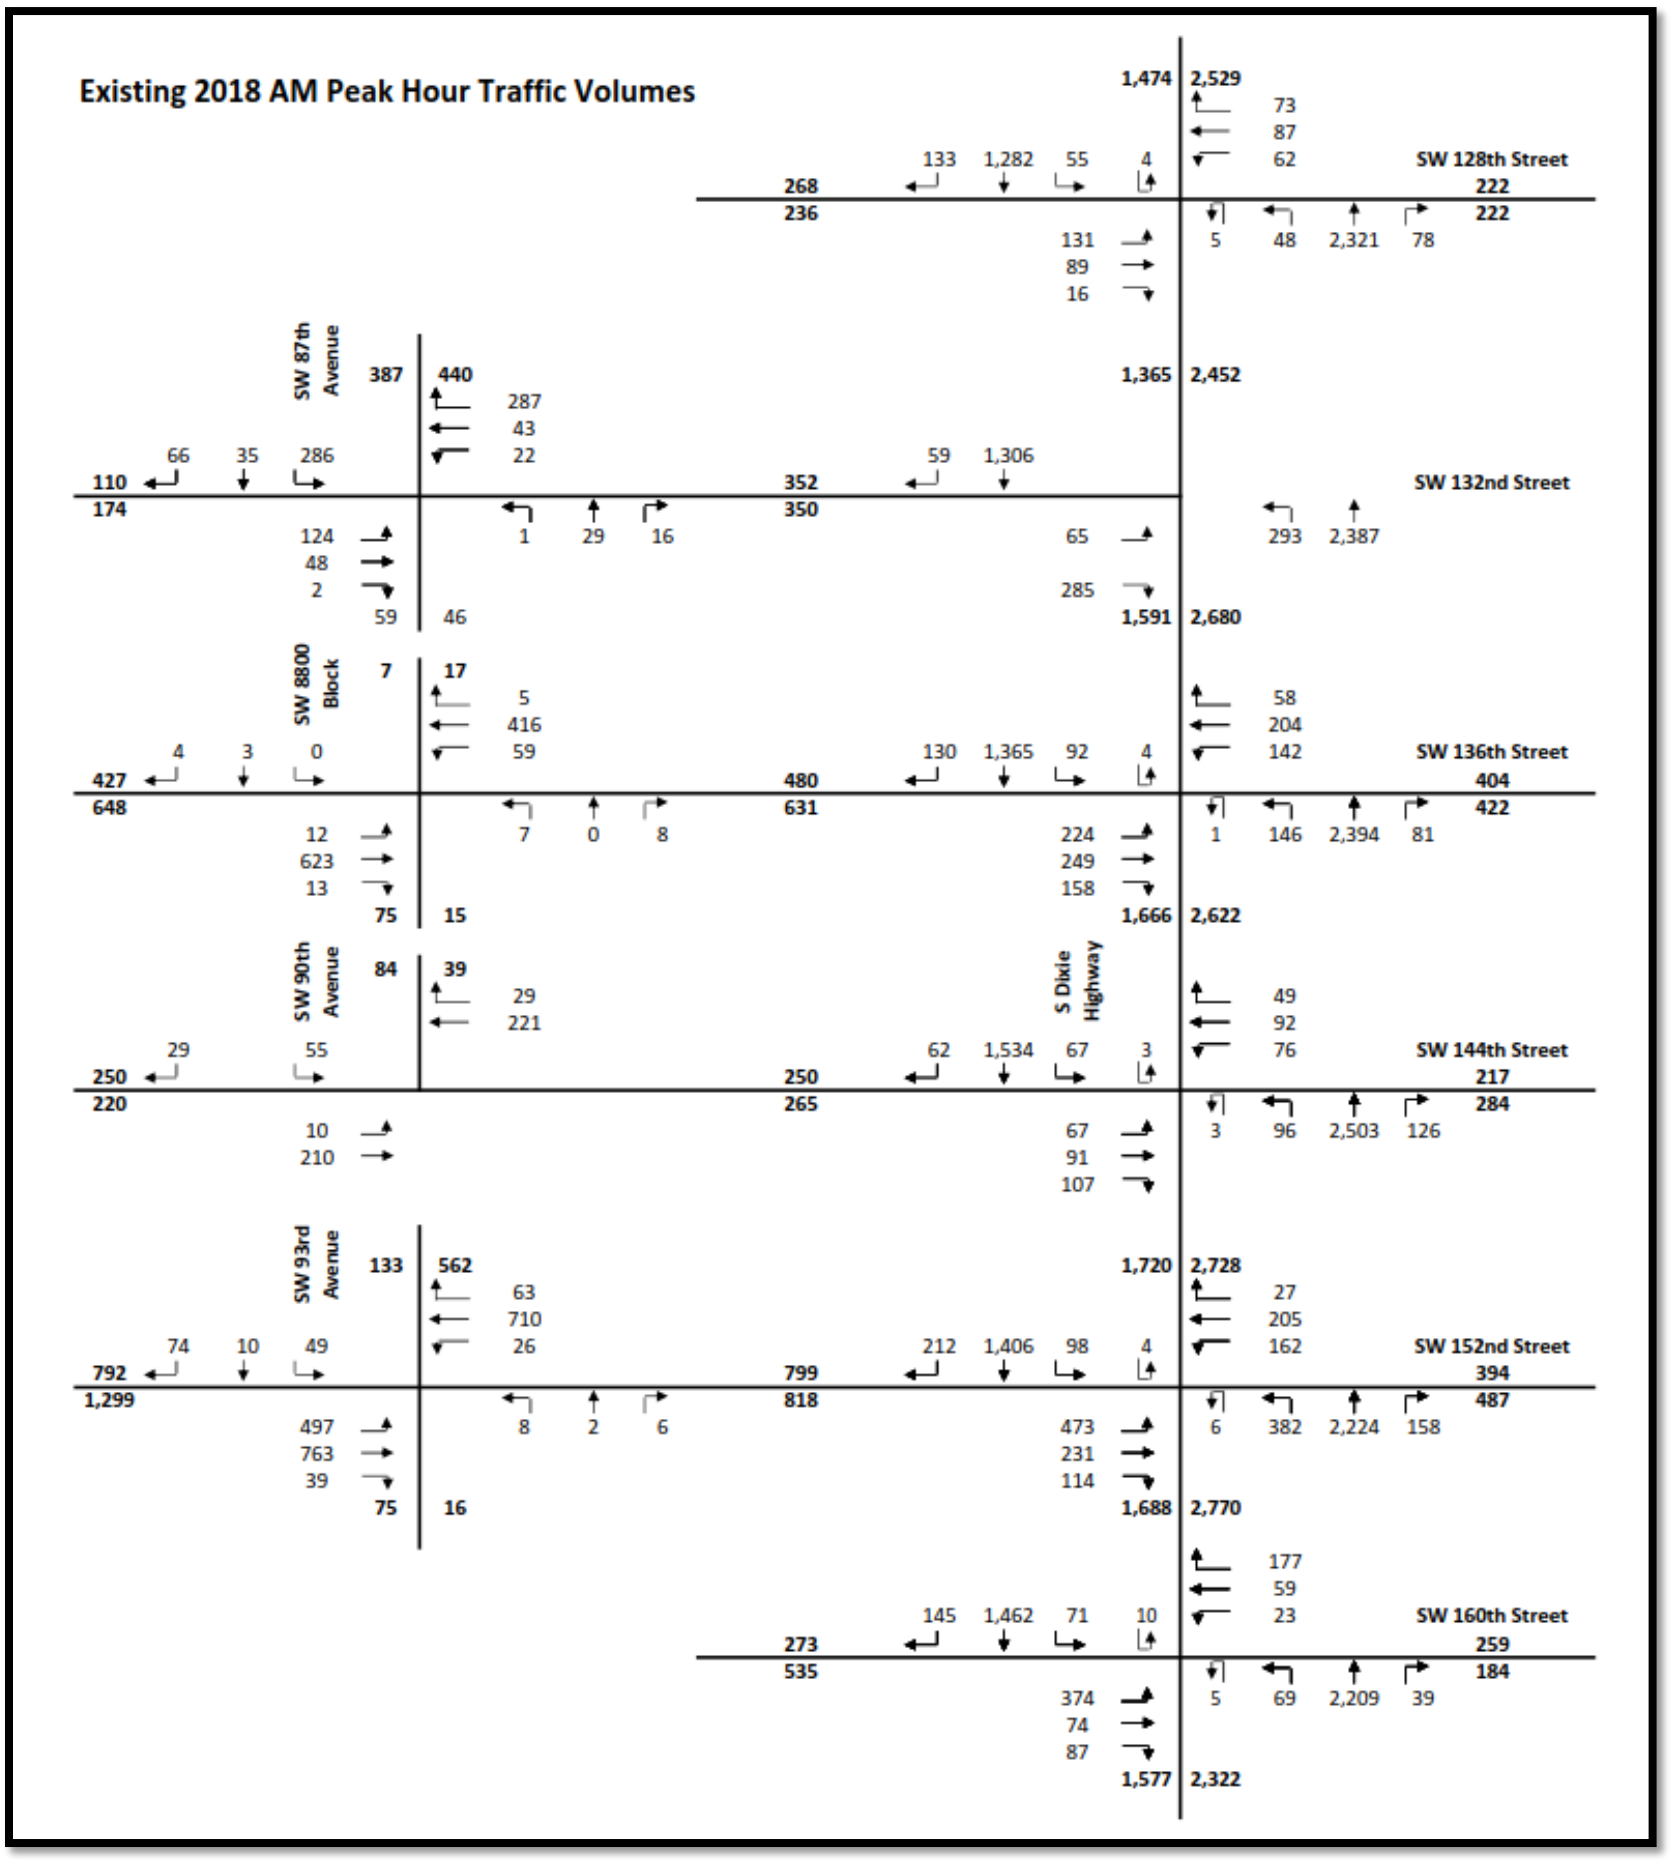

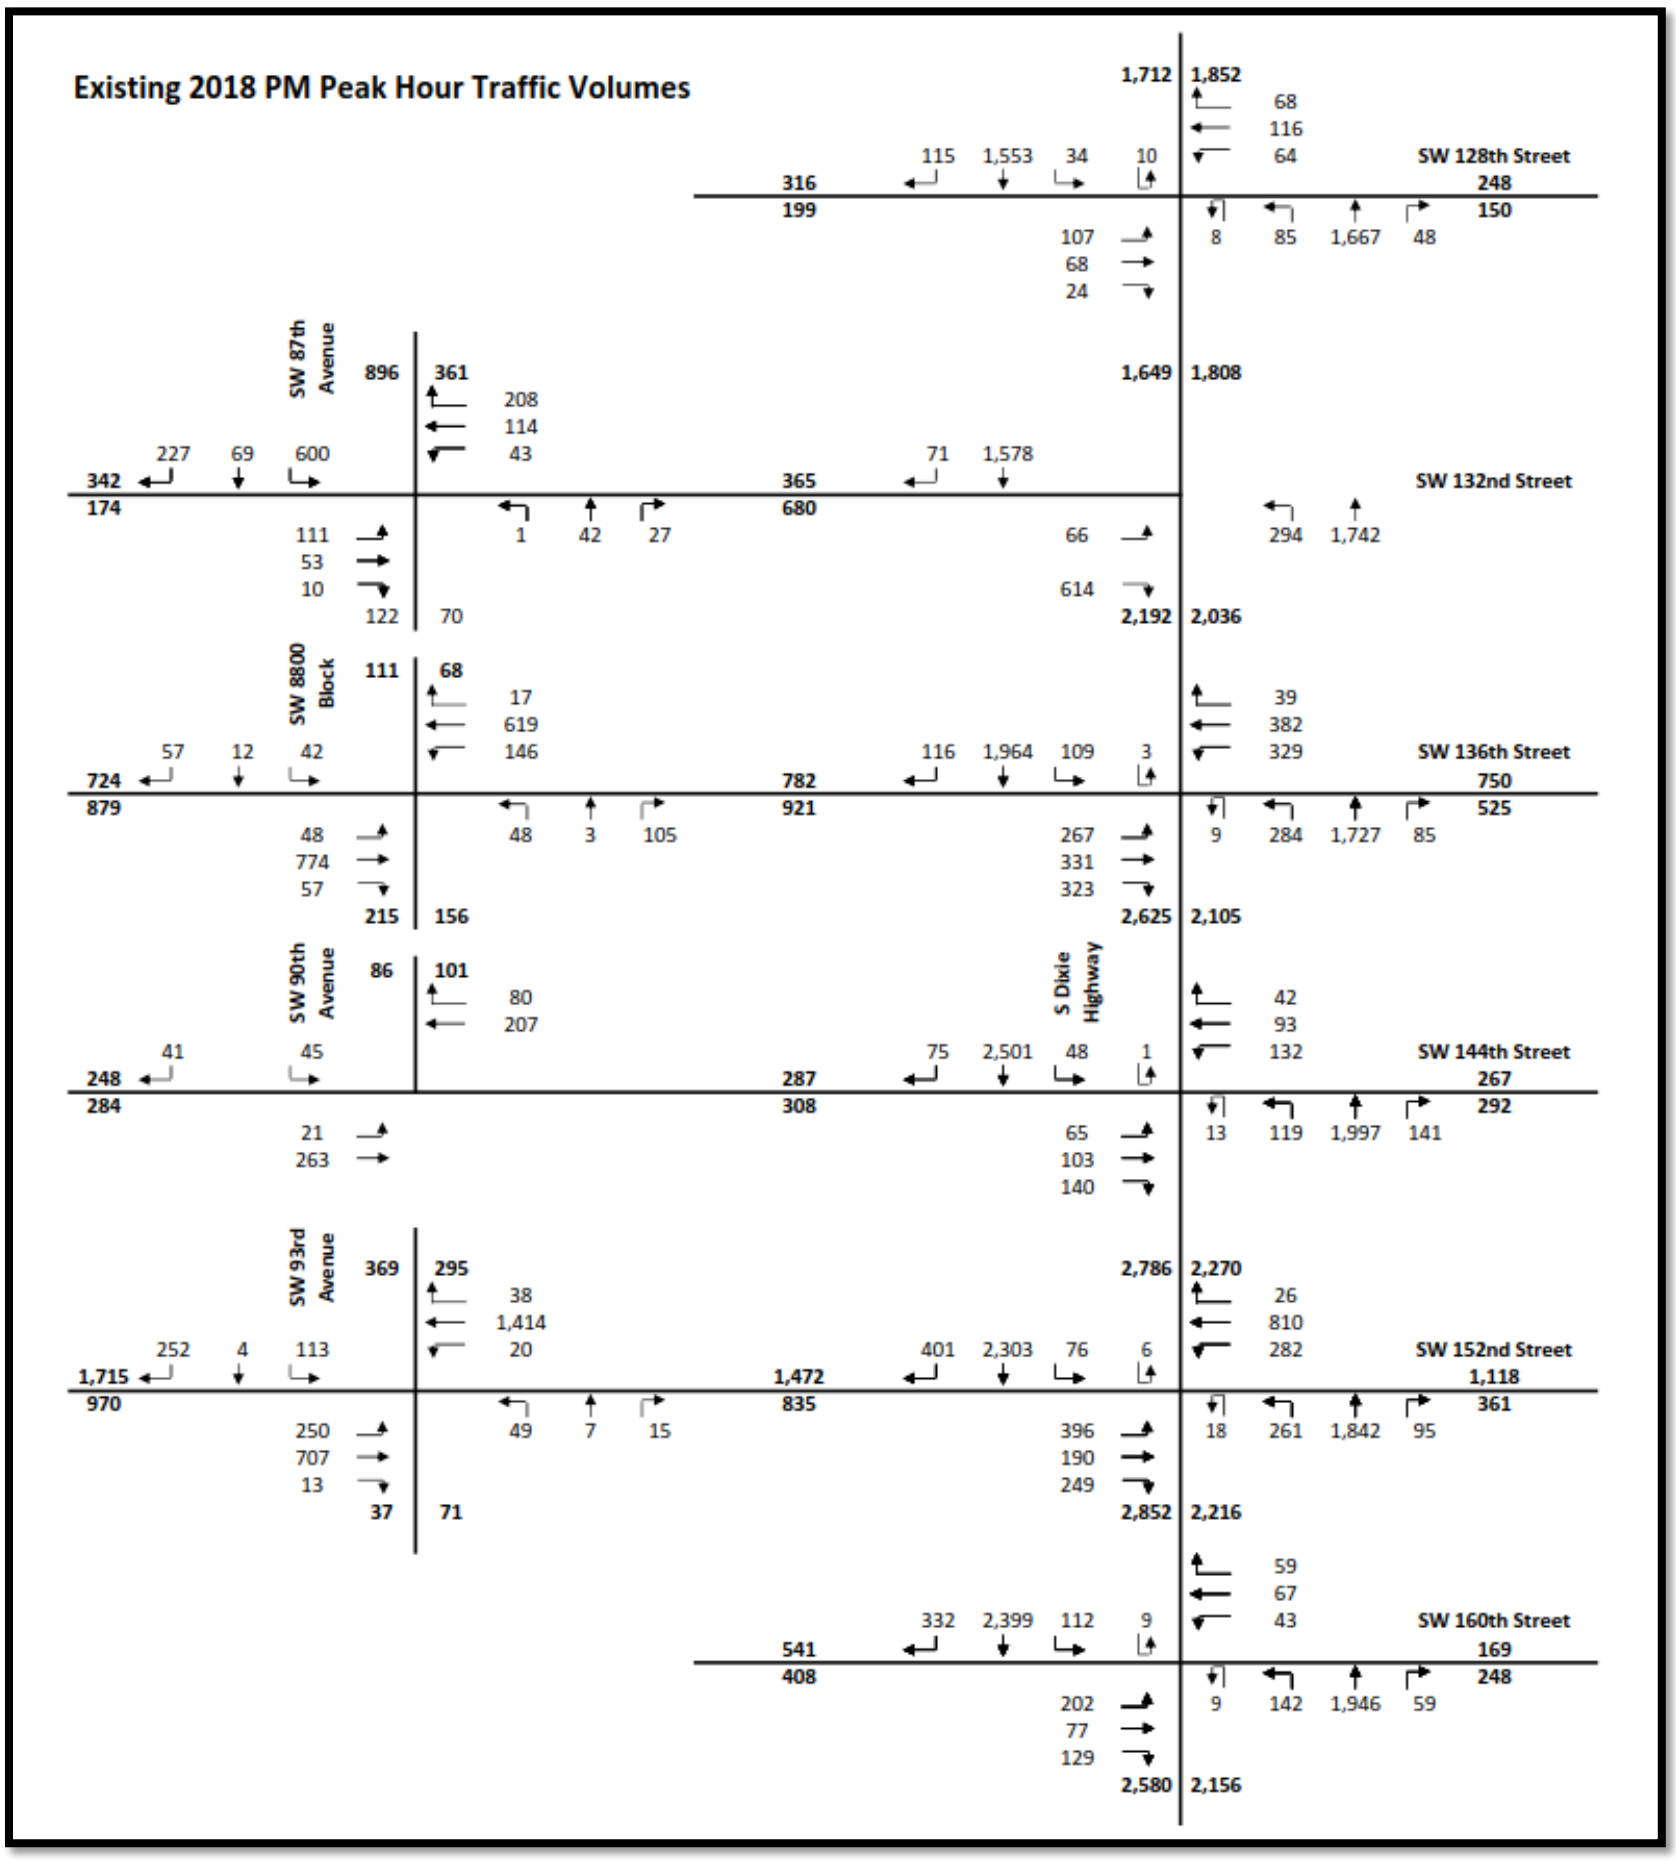

Figure 2: Existing 2018 PM Peak Hour Traffic Volumes

Synchro Intersection Analysis

The level of service and average intersection delay (second/vehicle) results from the existing intersection analysis are provided in **Table 1**. The analysis was performed using the existing turning movement volumes, signal timing, peak hour and truck factors, and existing intersection lane configuration. In the AM peak hour, the results show that 3 of the 16 intersections operate at unacceptable levels of service (E or F), which include Busway intersections at SW 136th Street and SW 160th Street. In the PM peak hour, the results show that 5 of the 16 intersections operate at unacceptable levels of service (E or F), which include the Busway intersections at SW 132nd Street and SW 136th Street. Intersection improvements and signal coordination of the intersections in the proximity of the Busway are important to preserve the corridor traffic operation.

Table 1: Existing 2018 Peak Hour Synchro Intersection Analysis Summary

Roadway	Cross Street	Peak Hour LOS (Delay)	
		AM	PM
SW 128th Street	U.S. 1 (South Dixie Highway)	D (35.9)	D (40.6)
	Busway	D (50.0)	C (32.4)
SW 132nd Street	U.S. 1 (South Dixie Highway)	C (28.0)	D (42.8)
	Busway	D (41.4)	**F (92.6)**
	SW 87th Ave	C (27.3)	D (40.0)
SW 136th Street	U.S. 1 (South Dixie Highway)	D (47.2)	**E (62.2)**
	Busway	**F (111.7)**	**E (72.8)**
	SW 8800 Block	A (7.4)	B (15.0)
SW 144th Street	U.S. 1 (South Dixie Highway)	D (51.2)	**E (56.2)**
	Busway	D (45.5)	D (42.6)
	SW 90th Ave (Unsignalized)	0 (0.0)	0 (0.0)
SW 152nd Street	U.S. 1 (South Dixie Highway)	**E (68.3)**	**F (157.1)**
	Busway	D (37.9)	D (39.0)
	SW 93rd Ave	C (26.8)	D (37.7)
SW 160th Street	U.S. 1 (South Dixie Highway)	D (48.8)	D (49.2)
	Busway	**E (55.5)**	D (50.7)

E (72.9): Level of service (LOS) E reflecting at capacity operations
F (121.8): Level of service (LOS) F reflecting over capacity operations
Delay is in Sec/Veh

Future Condition VISSIM Micro-simulation

The No-Build and Build with full preemption conditions VISSIM (Version 10) models were developed. The models included the U.S. 1 corridor from the SW 128th Street to the SW 160th Street intersection, as well as the adjacent adjoining intersections that may impact the Busway operations.

The model was reasonably adjusted to depict 2018 AM and PM peak period conditions and included three hours of simulation with 30 minutes of seeding time. This model simulation duration of 3.5 hours includes a warmup period (seeding period) for the model to reach equilibrium (i.e., vehicles entering equals vehicles exiting), the pre-peak hour, the peak hour, and the post-peak hour of dissipation of congestion and queues in the network.

Volume inputs were coded in 15-minute increments for the entire simulation period. **Table 2** summarizes the time-slicing factors used to compute the 15-minute increment volumes. The factors are the proportions of the 15-minute increment demand during the pre-peak hour and post-peak hour compared to the existing peak hour volumes.

Table 2: Hourly Volume Conversion Factor

	Simulation Time (Seconds)	AM Condition		PM Condition	
		15 minutes	Hourly	15 minutes	Hourly
Seed Time	0 - 900	22.74%	--	24.90%	--
	900 - 1800	22.74%		24.90%	
Pre-peak Hour	1800 - 2700	22.74%	93.07%	24.90%	98.23%
	2700 - 3600	22.62%		24.37%	
	3600 - 4500	24.48%		24.03%	
	4500 - 5400	23.23%		24.93%	
Peak Hour	5400 - 6300	24.76%	100.0%	25.08%	100.0%
	6300 - 7200	24.38%		25.21%	
	7200 - 8100	26.42%		24.71%	
	8100 - 9000	24.45%		24.99%	
Post-peak Hour	9000 - 9900	24.37%	92.98%	24.22%	93.96%
	9900 - 10800	26.68%		23.68%	
	10800 - 11700	22.70%		22.88%	
	11700 - 12600	22.23%		23.18%	

Travel Time and Speed along Busway

The travel speeds were computed from travel times collected on the Busway in the northbound and southbound directions. The No-Build and Build AM condition travel time and speed for the Busway are presented in **Tables 3** and **4**, respectively.

Table 5 quantifies Busway Build transit operations improvement over No-Build condition. The VISSIM analysis indicates that there would be 9 percent to 15 percent increase in speed on Busway with full preemption.

Table 3: No-Build 2018 AM Condition Busway Average Travel Time

Period	Direction	Buses		
		Volume	Average Travel Time (min)	Average Speed (mph)
Pre-peak Hour	Southbound	8	9	20
	Northbound	16	8	22
Peak Hour	Southbound	7	9	20
	Northbound	16	8	22
Post Peak Hour	Southbound	6	9	20
	Northbound	15	8	23

Notes:

1. Combined Average Speed of Express and Local Buses.
2. The Average Travel Time Includes Bus Stop Waiting Times.
3. The Average Speeds are based on Average Travel Time.
4. The Analyzed Busway Corridor is 3 mile long.

Table 4: Full Preemption Priority 2018 AM Build Condition Busway Average Travel Time

		Average Travel Time (min)	Average Speed (mph)
Pre-peak Hour	Southbound	13%	13%
	Northbound	20%	33%
Peak Hour	Southbound	13%	9%
	Northbound	27%	35%
Post Peak Hour	Southbound	13%	9%
	Northbound	20%	28%

Travel Time and Speed along U.S. 1

The No-Build and Build PM condition travel time and speed along U.S. 1 are presented in **Tables 9** and **10**, respectively.

Table 11 quantifies Busway Build transit operations improvement over No-Build condition. The VISSIM analysis indicates that there would be 7 percent to 56 percent decrease in speed on U.S. 1 with full preemption. This is because the northbound left-turn would receive limited green time due to full signal preemption on the Busway.

Table 9: No-Build 2018 AM Condition U.S. 1 Average Travel Time

Period	Direction	Traffic		
		Volume	Average Travel Time (min)	Average Speed (mph)

VISSIM Snapshots with All Buses Priority Preemption

In the AM Build condition, the northbound left turn spills back on U.S. 1 from SW 152nd Street to SW 160th Street as shown in **Figure 3** and **4**. SW 160th Street and SW 144th Street also has queue spillback on the eastbound and westbound approached as shown in **Figure 4** and **5**.

In the PM Build condition, no significant spill back on U.S. 1 is observed. However, significant eastbound and westbound spillback is observed on SW 136th Street as shown in **Figure 6.**

Figure 3: U.S. 1 and SW 152nd Street (AM Build Condition)

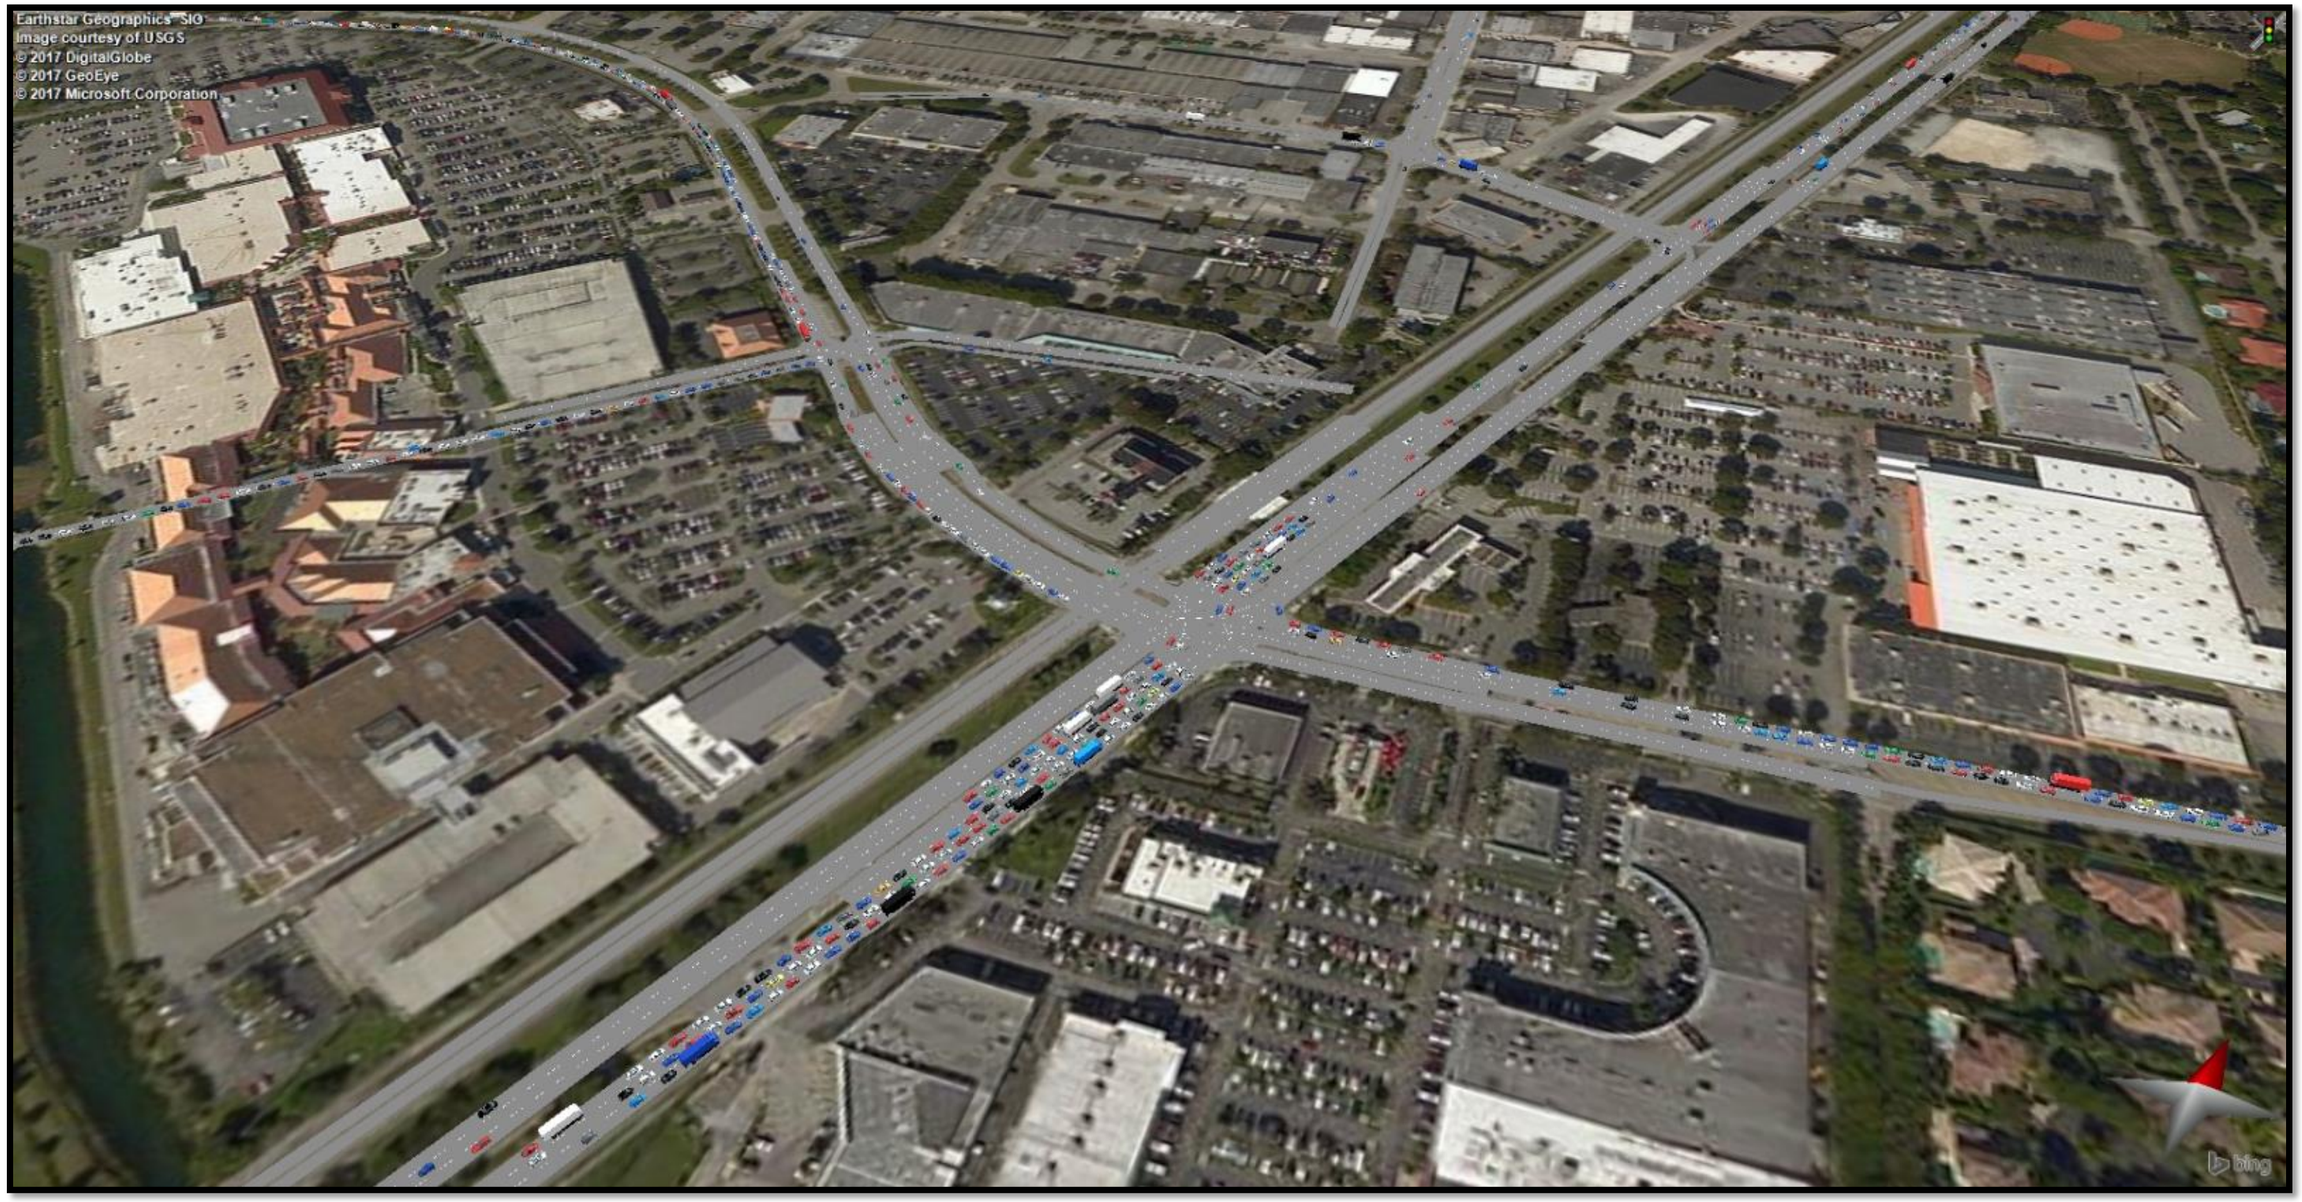

Figure 4: U.S. 1 and SW 160th Street (AM Build Condition)

Figure 5: U.S. 1 and SW 144th Street (AM Build Condition)

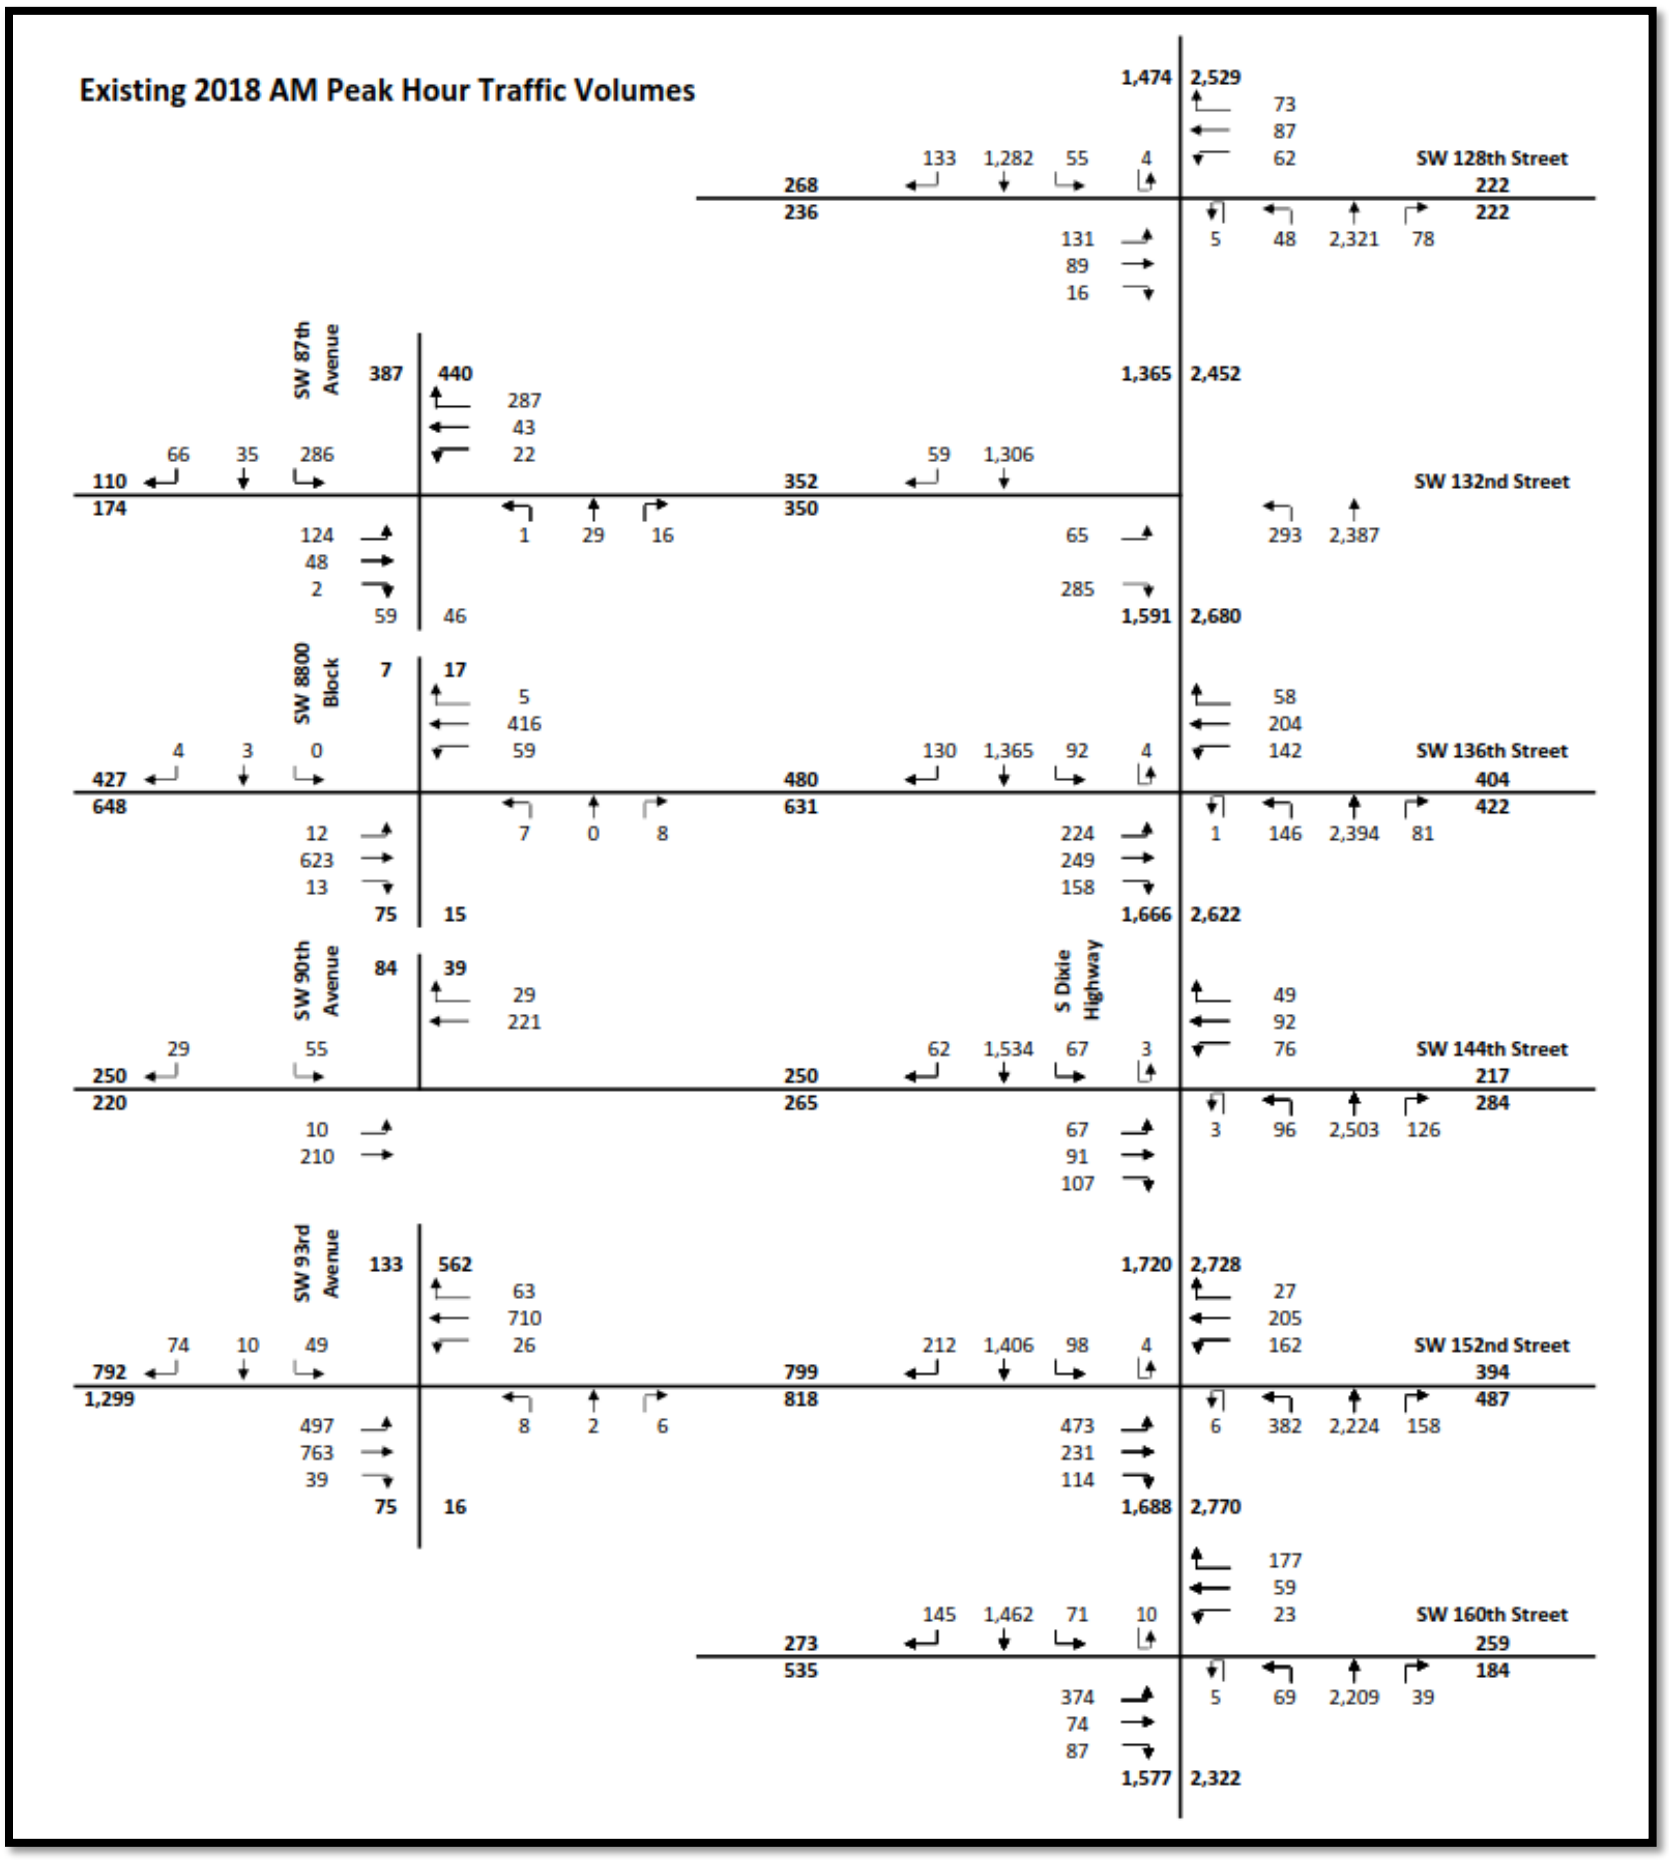

Figure 6: U.S. 1 and SW 136th Street (PM Build Condition)

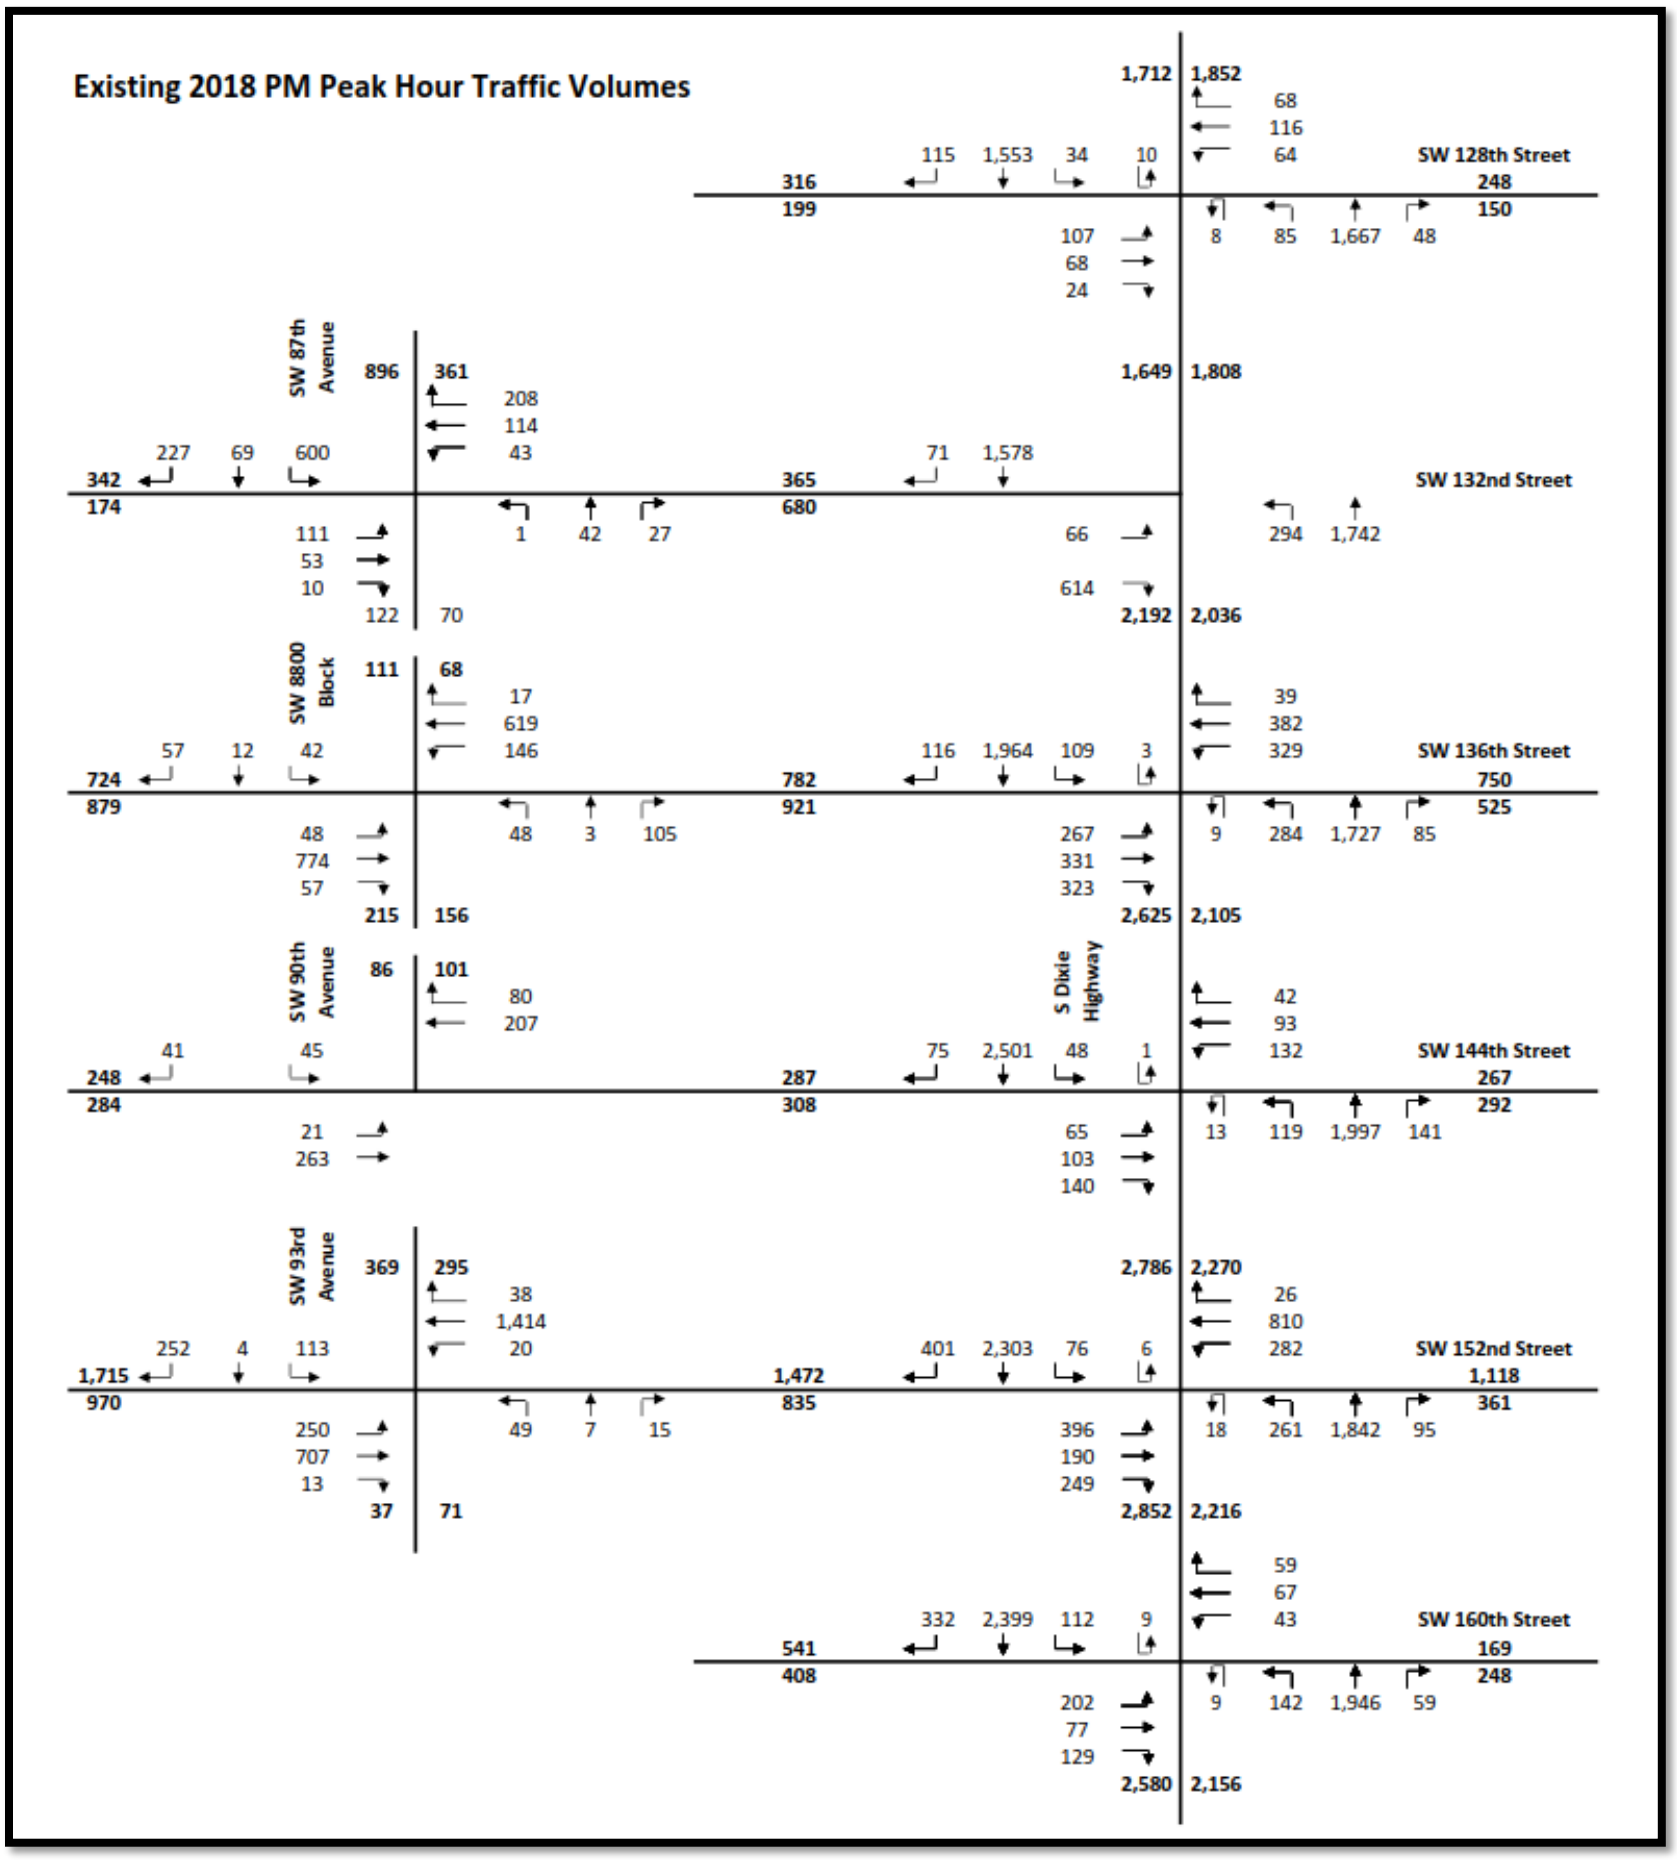

Preliminary Findings & Conclusions

Based on the traffic operational analysis, the proposed transit system improvements would improve the Busway operations in peak flow direction by 15 percent and 35 percent in the AM and PM condition, respectively.

I. Project Overview

Premiere Design Solutions, Inc. (PDS) is pleased to submit this Traffic Count Report to AECOM Technical Services, Inc. (Client), including Traffic Data Collection obtained between May 21, 2018 and June 8, 2018 for the Specific Purpose of an ongoing study along the South Corridor as identified in Miami-Dade County DTPW SMART plan, spanning parallel to South Dixie Highway (US-1) for a length of approximately 19.2 Miles from SW 98th Street in Unincorporated Miami-Dade County (Owner) to W Palm Drive in Florida City

This Report is limited to data necessary for a preliminary study and only includes the intersections requested by our client. The overall project intent is study this segment of the corridor for the implementation of mass transit improvements, to improve connectivity and transit solutions to residents and users in the area. This report includes the necessary traffic counts as requested by the client, for the completion of a traffic study (by others) necessary for the planning, design and implementation process of this corridor.

Due to noticeable difference in traffic operational characteristics at the Northern and Southern portion of the 19.2 mile corridor, the traffic operational analysis, and its data collection, will be divided into two segments. Segments would be known as the North and South. For the scope of this report, only major intersections as identified by the clients have been targeted for traffic counts of the North Segment. Overall, the North Segment alignment includes approximately 6.2 miles of the existing South Dixie Highway (US-1) between SW 98th Street and SW 186th Street. The South Segment includes approximately 13 miles of the existing South Dixie Highway (US-1) between SW 186th Street and W Palm Drive. See figure Below.

Please note this report is for the preparation of an LPA of existing data collection at critical signalized intersections as identified by our client and involves traffic volume data collection and for the development of existing 2018 weekday AM and PM peak period traffic volumes. Data collection has been obtained collecting 6-hour Turn Movement Counts (TMC) at 10 intersections and 72-hour Bi-Directional Approach machine counts at 3 intersections. Intersections identified by the client as major intersections to be included in this report are shown in the following tables:

6-Hour TMC Location

Int. #	Intersection
Northern Segment	
1	South Dixie Hwy @ SW 128TH St
2	South Dixie Hwy @ SW 132nd St
3	SW 132nd St @ SW 87th Ave
4	South Dixie Hwy @ SW 136th St
5	SW 136 Steet @ SW 8800 Block
6	South Dixie Hwy @ Mitchell Dr/ SW 144th Street
7	SW 144 Street @ SW 90 Avenue
8	South Dixie Hwy @ SW 152nd St
9	SW 152 Street @ 93 Avenue
10	South Dixie Hwy @ SW 164th St/ SW 160th Street

Total 10 intersections for 6-Hour TMC.

72-Hour Bi-Directional Approach Counts

Int. #	Int	Approaches				Total
		EA(WB)	WA(EB)	NA(SB)	SA(NB)	
Northern Segment						
1	South Dixie Hwy @ SW 128TH St	1	1	1	1	4
4	South Dixie Hwy @ SW 136th St	1	1	1	1	4
8	South Dixie Hwy @ SW 152nd St	1	1	1	1	4
	Total (Northern Segment)					***12***

II. Scope of Work

Our scope of work in this project included data collection at the intersections identified in the lists above. Traffic data collection at these intersections included traffic volume counts for intersection approaches as well as turning movement counts (TMC's). Traffic data collection were done with Machine Approach Count method at 3 intersections and Turning Movement Counts (TMC) at 10 intersections.

TMC's have been collected along the corridor for one midweek weekday as required (Thursday, May 24, 2018) during the AM and PM peak periods, each peak period being from 6:30 AM to – 9:30 AM and from 4:00 PM to 7:00PM respectively. TMC's were recorded using digital video recording equipment, which were later counted and categorized in traffic count data tables.

Intersection approaches were collected as 72 hour Bi-Directional Approach Counts, utilizing tubes placed at three major signalized intersections as detailed in table above. Tubes captured continuous demand and reports of data identify the corridor's AM and PM peak hour periods. The 24 hour machine counts have been conducted as required for three midweek weekdays (Tuesday, Wednesday and Thursday between May 22, 2018 and May 24, 2018), and are concurrent with the TMC's described above. Please note that due to heavy rainfall some equipment failed and Tube counts at Intersection No. 8 (South Dixie Highway and SW 152 Street) required additional counts performed between June 5, 2018 and June 7, 2018.

All data collected has been incorporated into traffic count sheets and provided in PDF format and also as excel files as raw data for the client's use. Data is presented in the following section of this report.

III. Turning Movement Counts (TMC)

As required in our scope of work, TMC data was collected at the ten (10) identified intersections as listed below:

- Intersection No. 1- South Dixie Hwy @ SW 128 Street
- Intersection No. 2- South Dixie Hwy @ SW 132 Street
- Intersection No. 3- SW 132 Street @ SW 87 Avenue
- Intersection No. 4- South Dixie Hwy @ SW 136 Street
- Intersection No. 5- SW 136 Street @ SW 8800 Block
- Intersection No. 6- South Dixie Hwy @ SW 144 Street
- Intersection No. 7- SW 144 Street @ SW 90 Avenue
- Intersection No. 8- South Dixie Hwy @ SW 152 Street
- Intersection No. 9- SW 152 Streer @ SW 93 Aveune
- Intersection No. 10- South Dixie Hwy @ SW 164 Street

The attached count reports include 20 pages, two per intersection corresponding to the AM and PM counts at each location. Reports highlight in blue the peak hour and in orange the peak 15 min period, and shows such volume peaks on the top center of the page. Data presented in the main table of the report correspond to all vehicles. Reports also include schematic diagrams of data collected and a schedule in yellow peak hour calculated by multiplying the peak 15 min. period by 4. This data also includes peak hourly data on each direction identified, and includes a breakdown of heavy vehicle, pedestrian and bicycle counts were applicable. All vehicles data includes heavy vehicles in this section.

Data has also been presented to the client in excel format submitted digitally via email and is not included in this report. Printed versions are available upon request. Data presented for the TMC's included 20 excel files, two per intersection, corresponding one for the AM and one for the PM count data showing 15min. data intervals.

IV. 72 Hour Bi-Directional Approach Counts

As required in our scope of work, 72-Hour Bi-Directional Approach Counts or Tube Counts were collected at the three identified intersections as listed below:

- Intersection No. 1- South Dixie Hwy @ SW 128 Street
- Intersection No. 4- South Dixie Hwy @ SW 136 Street
- Intersection No. 8- South Dixie Hwy @ SW 152 Street

The attached count reports include 180 pages of data sheets, twelve per intersection corresponding to hourly data and 48 per intersection corresponding to 15 min. data. Reports include all vehicle approach count data for each of the 4 directions, and each direction has a North, South and East, West reports plus a combination sheet of NB/SB or EB/WB. Reports highlight in yellow percentages data that is not applicable to this project, and AM and PM peak volumes.

Data has also been presented to the client in excel format submitted digitally via email and is not included in this report. Printed versions are available upon request. Electronic data presented for the approach counts included 72 excel files, twelve per intersection for hourly counts and twelve per intersection for 15 minute counts.

Turning Movement Counts (TMC)

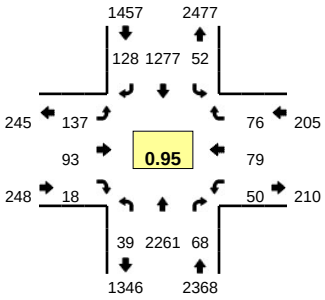

- Intersection No. 1- South Dixie Hwy @ SW 128 Street
- Intersection No. 2- South Dixie Hwy @ SW 132 Street
- Intersection No. 3- SW 132 Street @ SW 87 Avenue
- Intersection No. 4- South Dixie Hwy @ SW 136 Street
- Intersection No. 5- SW 136 Street @ SW 8800 Block
- Intersection No. 6- South Dixie Hwy @ SW 144 Street
- Intersection No. 7- SW 144 Street @ SW 90 Avenue
- Intersection No. 8- South Dixie Hwy @ SW 152 Street
- Intersection No. 9- SW 152 Streer @ SW 93 Aveune
- Intersection No. 10- South Dixie Hwy @ SW 164 Street

APPENDIX E: SUPPORTING DOCUMENTS

FDOT
Florida Department of Transportation
RICK SCOTT
GOVERNOR
605 Suwannee Street
Tallahassee, FL 32399-0450
MIKE DEW
SECRETARY

February 9, 2018

The Honorable Carlos A. Gimenez
Mayor, Miami-Dade County
Stephen P. Clark Center
111 N.W. First Street, 29th Floor
Miami, Florida 33128

The Honorable Francis Suarez
Mayor, City of Miami
3500 Pan American Drive
Miami, Florida 33133

The Honorable Esteban Bovo, Jr.
Chair, Miami-Dade Board of County Commissioners
Stephen P. Clark Center
111 NW First Street, Suite 320
Miami, Florida 33128

Dear Mayor Gimenez, Mayor Suarez and Chair Bovo:

It was a pleasure meeting with you to review the ongoing efforts to advance the Strategic Miami Area Rapid Transit (SMART) Plan. As we discussed, the Department is actively supporting the development of SMART Plan projects. The Department has taken the lead in the required Planning Development and Environmental (PD&E) Study work for the North Corridor and the Kendall Drive Corridor, and is fully funding the costs of both studies. The Department also took the lead role for the Northeast Corridor study and committed to funding approximately 50% of the cost of the PD&E study for the Beach Corridor. The Miami-Dade Transportation Planning Organization also recently requested a capital funding commitment by the Florida Department of Transportation for two portions of the Strategic Miami Area Rapid Transit Plan, the North and South corridors.

The Department has already committed to continuing support for the South Miami-Dade Transitway project, which is one of the two segments the TPO specifically identified in its request for a capital funding commitment. As expressed to Representative Trujillo by Interim

Secretary Cone in her February 7, 2017 letter, provided the project continues to receive local commitment and financial support, meets the eligibility criteria for investment of state funds, and demonstrates a sufficient return on investment in accordance with Department guidelines, the Department intends to commit state capital funds to strengthen the project finance plan. The Department has the same commitment to the North Corridor portion of the SMART Plan.

There are several steps to be accomplished before the Department can make a more specific commitment of capital funds. Section 341.051, Florida Statutes, requires the Department to obtain legislative approval of any commitment for a public transit project which would result in the ultimate expenditure or commitment of state funds in excess of $5 million. The Department obtains this approval through its work program process, which requires identification of a specific project and amount of requested state funding. The Department will be able to make a specific capital funding commitment when development of these projects has progressed to the point that a defined capital project is identified for each segment (including the project mode) and project estimates are available. Completion of the applicable PD&E study, including selection of the locally preferred alternative and development of appropriate estimates, and identification of the proposed financing sources and techniques (including the proposed source of federal funds and local commitments) will need to occur before the Department can evaluate the financial feasibility of each project and request legislative authorization to commit state matching capital funding through its work program process. The Department expects to complete the PD&E study for the North Corridor later this year and we understand that the County anticipates completing the PD&E study for the South Miami-Dade Transitway this spring.

The Department has indicated that it does not anticipate that the limitation in section 341.051(5)(a), Florida Statutes, will apply to the SMART Plan corridor projects. Projects connecting to an existing fixed guideway transit system such as the Miami Metrorail, Metromover, or Tri-Rail may be considered to be extensions of the existing transit systems and not "individual" fixed guideway projects subject to the 12.5% cap. Therefore, the Department may potentially fund up to 50% of the nonfederal share of the costs of the North and South corridor projects, not to exceed the local share.

You previously inquired about the status of preliminary work on the Northeast Corridor. The Northeast Corridor is effectively part of the larger Tri-Rail Coastal Link project that was the subject of the South Florida East Coast Corridor Study managed by the Department. Project development work on the Tri-Rail Coastal Link project has been on hold following a joint request by the South Florida Regional Transportation Authority and the Department to the Federal Transit Administration. The Department's understanding is that the owner of that corridor is not currently interested in discussing access to the corridor, effectively limiting our ability to advance that project.

The TPO has adopted a number of resolutions to advance the SMART Plan projects. The Department concurs with the TPO's statement (in Resolution #40-17) that development of the six rapid transit corridors will need the infusion of various funding sources, including federal, state, county, and municipal participation. The financial plan framework identified by the TPO in Resolution #41-17 appropriately contemplates pursuing a very broad mix of capital funding, including a variety of potential federal, state, and local funding opportunities. The Department agrees that a viable finance plan for the SMART Plan projects will require a wide mix of funding and encourages the broadest possible approach to identifying all potentially available sources. The finance plan for the proposed Wave Streetcar project in downtown Fort Lauderdale reflects the kind of broad mix of funding that is practically required to advance transit projects today, including federal TIGER and Small Starts program grant capital funds, State transit grant funds, a State Infrastructure Bank loan, committed county and city capital funds, and the Broward County commitment to the full costs of operation and maintenance. A funding solution for the SMART Plan projects will require a similar effort to obtain all potentially available federal funds, with strong committed capital support at the local level to match the requested state commitment, and a local commitment to the ongoing costs of operation and maintenance.

The first important required steps to advance the SMART Plan projects are underway, and the Department is proud to be playing a significant role in that effort.

Sincerely,

Mike Dew
Secretary

cc: Miami-Dade County Legislative Delegation
District Secretary James Wolfe

DRAFT: For Deliberative Purposes Only

Assumptions / Notes

Corridor RTS Stations included in the estimate is as per the revised "Vault" Station Design which is approximately a 120' long station building with shallow foundations.
344th St Terminal RTS Station is assumed to be a single story structure at approximately 6000 SF with a café / coffee service area.
Dadeland Station renovation scope to be determinded. SF price allowance to be used until design is determined.

							30.0%		

Assumptions / Notes

Environmental Mitigation is not included.
No Landscaping Improvements are included corridor wide other than sodding disturbed areas.
No Roadway Reconstruction is included along the corridor except at new RTS Stations locations where the corridor will be re-constructed to accommodate these new stations.
No Bicycle Path Improvements are included along the corridor except at new RTS Stations locations where the corridor will be re-constructed to accommodate these new stations.
Existing Busway will be milled & resurfaced between Dadeland South Station and Carribean Blvd. No other sections of the existing busway will be resurfaced.
Concrete paving will only be at RTS Station bus drop-off / pick-up areas. Existing Stations and Busway / Secondary Street intersections will not have any new concrete pavement.
Estimate does not include any costs for Park & Ride Facilities along the corridor.

Assumptions / Notes

All existing canal crossing bridges are assumed to be remaining in place. A 2nd bridge will be added at each canal crossing to accommodate the roadway for Emergency Vehicles.
Pricing includes 1 mile of additonal track at southern terminus to account for additional tail track modifications required.

DRAFT: For Deliberative Purposes Only

Assumptions / Notes

Corridor LRT Stations at grade are assumed to be single story structures at approximately 4500 SF per building.

344th St Terminal RTS Station is assumed to be similar to the Corridor LRT Stations.

Dadeland Station renovation scope to be determinded. SF price allowance (to be used until design is determined) is for the addition of a platform area with a canopy that can accommodate light rail vehicles next to the HRT platforms .

DECORUM POLICY:

No individual shall make slanderous or unduly repetitive remarks, or engage in any other form of behavior that disrupts or impedes the orderly conduct of the meeting, as determined by the Mayor and/or Sergeant at Arms. No clapping, applauding, heckling or verbal outbursts in support or opposition to a speaker or his or her remarks shall be permitted. No signs or placards shall be permitted in the Council Chambers. Individuals addressing the Mayor and Council must first be recognized by the Mayor and must do so utilizing the designated podium in the Council Chamber. No more than one person may address the Council at a time unless specifically permitted by the Mayor. No person may stand in or on the aisles, the well or the dais. Individuals waiting to be recognized shall wait in an area designated by the City. Persons exiting the council chambers shall do so quietly. Any individuals determined to have violated the Rules of Decorum, as determined by the Mayor or Sergeant at Arms may be required to leave the Council Chambers.

16. NEXT MEETING AND ADJOURNMENT

WE, THE VILLAGE COUNCIL OF THE VILLAGE OF PALMETTO BAY, HEREBY COMMIT OURSELVES TO MAINTAINING CIVILITY IN OUR PUBLIC AND POLITICAL DISCOURSE AND PLEDGE TO THE FOLLOWING PRINCIPLES:

- We will respect the right of all citizens in our community to hold different opinions;
- We will avoid rhetoric intended to humiliate or question the wisdom of those whose opinions are different from ours;
- We will strive to understand differing perspectives;
- We will choose our words carefully;
- We will speak truthfully without accusation and we will avoid distortion;
- We will speak out against violence, prejudice, and incivility in all of their forms, whenever and wherever they occur.

PURSUANT TO FLORIDA STATUTES 286.0105, THE VILLAGE HEREBY ADVISES THE PUBLIC THAT IF A PERSON DECIDES TO APPEAL ANY DECISION MADE BY THIS COUNCIL WITH RESPECT TO ANY MATTER CONSIDERED AT ITS MEETING OR HEARING, HE OR SHE WILL NEED A RECORD OF THE PROCEEDINGS, AND THAT FOR SUCH PURPOSE, THE AFFECTED PERSON MAY NEED TO ENSURE THAT A VERBATIM RECORD OF THE PROCEEDING IS MADE, WHICH RECORD INCLUDES THE TESTIMONY AND EVIDENCE UPON WHICH THE APPEAL IS TO BE BASED. THIS NOTICE DOES NOT CONSTITUTE CONSENT BY THE VILLAGE FOR THE INTRODUCTION OR ADMISSION OF OTHERWISE INADMISSIBLE OR IRRELEVANT EVIDENCE, NOR DOES IT AUTHORIZE CHALLENGES OR APPEALS NOT OTHERWISE ALLOWED BY LAW.

12. ADJOURNMENT

WE, THE TOWN COUNCIL OF CUTLER BAY, HEREBY RECOMMIT OURSELVES TO MAINTAIN CIVILITY IN OUR PUBLIC AND POLITICAL DISCOURSE AND WE HEREBY PLEDGE OUR COMMITMENT TO THE FOLLOWING PRINCIPLES:

• We will respect the right of all citizens in our community to hold different opinions;
• We will avoid rhetoric intended to humiliate or question the wisdom of those whose opinions are different from ours;
• We will strive to understand differing perspectives;
• We will choose our words carefully;
• We will speak truthfully without accusation and we will avoid distortion; and
• We will speak out against violence, prejudice and incivility of their forms, whenever and wherever they occur.

PURSUANT TO FLORIDA STATUTES 286.0105, THE TOWN HEREBY ADVISES THE PUBLIC THAT IF A PERSON DECIDES TO APPEAL ANY DECISION MADE BY THIS COUNCIL WITH RESPECT TO ANY MATTER CONSIDERED AT ITS MEETING OR HEARING, HE OR SHE WILL NEED A RECORD OF THE PROCEEDINGS, AND THAT FOR SUCH PURPOSE, THE AFFECTED PERSON MAY NEED TO ENSURE THAT VERBATIM RECORD OF THE PROCEEDING IS MADE, WHICH RECORD INCLUDES THE TESTIMONY AND EVIDENCE UPON WHICH THE APPEAL IS TO BE BASED. THIS NOTICE DOES NOT CONSTITUTE CONSENT BY THE TOWN FOR THE INTRODUCTION OR ADMISSION OF OTHERWISE INADMISSIBLE OR IRRELEVANT EVIDENCE, NOR DOES IT AUTHORIZE CHALLENGES OR APPEALS NOT OTHERWISE ALLOWED BY LAW.

Resolutions

CITY OF FLORIDA CITY
RESOLUTION NUMBER: 18-34

A RESOLUTION OF THE CITY COMMISSION OF THE CITY OF FLORIDA CITY, FLORIDA, IN FAVOR OF THE SELECTION OF BUS RAPID TRANSIT FOR THE SOUTH CORRIDOR PROJECT DEVELOPMENT & ENVIRONMENT STUDY (PD&E) AND PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, Miami-Dade County and the Florida Department of Transportation (FDOT) have been working on the development of the SMART plan rapid transit improvements and project Development and Environment (PD&E) studies since 2016; and

WHEREAS, under Resolution No: 47-17 the Miami-Dade County Transportation Planning Organization passed on October 19th, 2017 that prioritized both the North and South corridors to Priority 1 in the Long Range Transportation Plan (LRTP) and the Transportation Improvement Program (TIP) for the development of said Corridors: and

WHEREAS, the Miami-Dade County Department of Transportation and Public Works (DTPW) has developed their PD&E study for the South Corridor through the development of alternatives and anticipates that they will be making a recommendation to the TPO in July of 2018; and

WHEREAS, time is of the essence in order to submit an application for a Small Stars Bus Rapid Transit project to the Federal Transit Administration in the fall of 2018 in order to maintain the opportunity for federal funding for the South Corridor:

NOW, THEREFORE, BE IT RESOLVED BY THE MAYOR AND CITY COMMISSION OF THE CITY OF FLORIDA CITY, FLORIDA, AS FOLLOWS:

THAT THE CITY OF FLORIDA CITY RESOLVES TO SUPPORT THE RECOMMENDATION OF THE DTPW FOR A BUS RAPID TRANSIT PROJECT FOR THE SOUTH CORRIDOR THAT WOULD REINFORCE AND IMPROVE THE OPERATION AND EFFICIENCY OF THE TRANSITWAY.

THAT THE CITY OF FLORIDA CITY WANTS TO MAKE IT CLEAR THAT WE FEEL THAT SOUTH MIAMI DADE IS ENTITLED DUE TO PRIOR PROMISES TO HAVE METRO RAIL EXTENDED TO FLORIDA CITY.

RESOLUTION NO: 18-34

THAT THE CITY OF FLORIDA CITY VIEWS BUS RAPID TRANSIT AS A MORE TIMELY IMPROVEMENT THAT CAN ACCOMMODATE METRO RAIL EXTENSION IN THE FUTURE.

PASSED AND ADOPTED THIS 10TH DAY OF JULY, 2018.

OTIS T WALLACE, MAYOR

ATTEST:

JENNIFER A. EVELYN, CITY CLERK

Approved as to form and legal sufficiency:

REGINE MONESTIME, CITY ATTORNEY

Offered By: MAYOR

Motion to adopt by Comm. Berry seconded by Vice Mayor Shiver

FINAL VOTE AT ADOPTION:

Mayor Otis T. Wallace	Yes
Vice Mayor R. S. Shiver	Yes
Commissioner Eugene D. Berry	Yes
Commissioner Avis Brown	Opposed
Commissioner Sharon Butler	Absent

CITY OF HOMESTEAD, FLORIDA

RESOLUTION NO. R2018-06-59

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF HOMESTEAD, FLORIDA; **SUPPORTING THE IMPLEMENTATION OF BUS RAPID TRANSIT SERVICE ("BRT") FOR THE SOUTH DADE CORRIDOR RAPID TRANSIT PROJECT; ACCEPTING COMMITMENT OF MIAMI- DADE COUNTY THAT THE DOWNTOWN HOMESTEAD TRANSIT STATION BE LOCATED ADJACENT TO HOMESTEAD STATION;** PROVIDING FOR IMPLEMENTATION; PROVIDING FOR DISTRIBUTION; PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, in April 2017, the Miami-Dade County Department of Transportation and Public Works ("DTPW") commissioned the South Corridor Rapid Transit Study to document existing conditions along the South Dade Corridor and develop transit mode alternatives ("Project"); and

WHEREAS, the City of Homestead is located along the South Dade Corridor; and

WHEREAS, on June 12, 2018, DPTW presented to the City of Homestead an overview of the Project and presented the City with different alternatives, and expressly confirmed the County's commitment that the downtown Homestead BRT station would be relocated adjacent to the site of the City's Homestead Station ; and

WHEREAS, the Project is scheduled to be on the July 19, 2018 Miami-Dade TPO Governing Board agenda for the selection of a Locally Preferred Alternative ("LPA"); and

WHEREAS, after considering the options presented to the City, the City supports the implementation of Bus Rapid Transit Service ("BRT"); and

WHEREAS, the City requests, and hereby accepts the County's commitment, that the existing downtown Homestead BRT station be located adjacent to the site of the City's Homestead Station as indicated in the map Exhibit 1; and

WHEREAS, the Council finds that the implementation of the BRT System and location of the downtown Homestead BRT station adjacent to the Homestead Station parking garage is in the best interest of the City and the residents and businesses of the South Dade Corridor.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF HOMESTEAD, FLORIDA, AS FOLLOWS:

Section 1. **Recitals**. That the above stated recitals are hereby adopted and confirmed.

Section 2. **Council Supporting BRT System**. The City Council supports the BRT System for the South Corridor Rapid Transit Project.

Section 3. **Council Requesting And Accepting Station Relocation**. The City Council requests that the existing downtown Homestead transit station located near City Hall be located adjacent to the City's Homestead Station Project, and hereby accepts the County's commitment for such location.

Section 4. **Implementation**. That the City Manager is hereby authorized to execute all necessary documents and to take any and all action necessary to effectuate the intent of this Resolution.

Section 5. **Distribution**. That the City Clerk is hereby directed to distribute a copy of this Resolution to the Miami-Dade County Board of County Commissioners.

Section 6. **Effective Date**. That this Resolution shall become effective immediately upon its adoption.

PASSED AND ADOPTED THIS 20th day of June, 2018.

JEFF PORTER,
Mayor

Councilman Larry Roth	*YES*

TPO RESOLUTION #

RESOLUTION SELECTING THE LOCALLY PREFERRED ALTERNATIVE (LPA) FOR SOUTH DADE TRANSITWAY CORRIDOR OF THE STRATEGIC MIAMI AREA RAPID TRANSIT (SMART) PLAN

WHEREAS, the Interlocal Agreement creating and establishing the Miami-Dade Metropolitan Planning Organization (MPO), for the Miami Urbanized Area, now known as the Transportation Planning Organization (TPO), requires that the TPO provide a structure to evaluate the adequacy of the transportation planning and programming process; and

WHEREAS, in 2016, the TPO Governing Board adopted Resolution #06-16, which established transit as the "highest priority" in Miami-Dade County. Subsequently, the Governing Board unanimously adopted Resolution #26-16, which approved the Strategic Miami Area Rapid Transit (SMART) Plan in order to implement mass transit projects throughout the County; and

WHEREAS, the SMART Plan includes six (6) rapid transit corridors along with a network of Bus Express Rapid Transit (BERT) services;

WHEREAS, implementation of the vital rapid transit corridors, in whole or in part, will provide needed transportation alternatives and relief from traffic congestion in Miami-Dade County; and

WHEREAS, the South Dade Transitway Corridor is one of the six (6) SMART Plan rapid corridors, which stretches approximately 20 miles from the Dadeland South Metrorail Station to SW 344th Street in Florida City; and

WHEREAS, under TPO Resolution #47-17, the Governing Board prioritized and advanced the development of the South Dade Transitway Corridor (along with the North Corridor) to Priority I in the Long Range Transportation Plan (LRTP); and

WHEREAS, the South Corridor (formally known as South Miami-Dade Transit Corridor) includes a long history of transportation planning. In 2006 a locally preferred alternative was selected by the Governing Board (formally the MPO/Resolution #30-06), as a modified enhanced bus rapid transit (BRT) that included a Metrorail extension to SW 104th Street, and a long-range provision of further extending Metrorail south, as ridership demand warrants; and

WHEREAS, the Project Development and Environment (PD&E) studies for the six SMART Plan corridors have been approved and are presently in progress, with the Miami-Dade Department of Transportation and Public Works serving as the lead agency for the South Dade Transitway Corridor,

NOW, THEREFORE, BE IT RESOLVED BY THE GOVERNING BOARD OF THE TRANSPORTATION PLANNING ORGANIZATION IN ITS ROLE AS THE MPO FOR THE MIAMI URBANIZED AREA, that this Board hereby selects _____ as the locally preferred alternative for the South Dade Transitway Corridor of the Strategic Miami Area Rapid Transit (SMART) Plan.

The adoption of the foregoing resolution was moved by . The motion was seconded by , and upon being put to a vote, the vote was as follows:

Chairman Esteban L. Bovo, Jr.-
Vice Chairman Francis Suarez-

Board Member Juan Carlos Bermudez	-	Board Member Vince Lago	-
Board Member Jose "Pepe" Diaz	-	Board Member Daniella Levine Cava	-
Board Member Audrey M. Edmonson	-	Board Member Roberto Martell	-
Board Member Dan Gelber	-	Board Member Joe A. Martinez	-
Board Member Oliver G. Gilbert, III	-	Board Member Jean Monestime	-
Board Member Perla T. Hantman	-	Board Member Dennis C. Moss	-
Board Member Carlos Hernandez	-	Board Member Jeff Porter	-

Board Member Sally A. Heyman	-	Board Member Shelly Smith Fano	-
Board Member Eileen Higgins	-	Board Member Rebeca Sosa	-
Board Member Barbara J. Jordan	-	Board Member Javier D. Souto	-
Board Member Smith Joseph	-	Board Member Xavier L. Suarez	-

The Chairperson thereupon declared the resolution duly passed and approved this day of 19th day of July, 2018.

PUBLIC KICK-OFF MEETING

South Corridor Rapid Transit Project

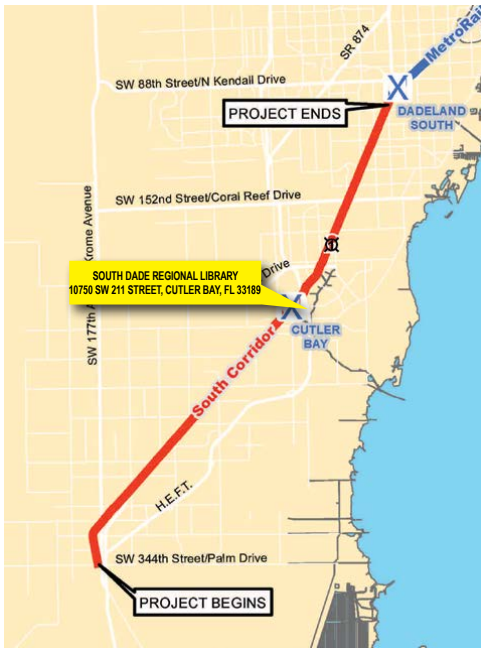

Your feedback is important!

South Dade Transitway from SW 344th Street on the south to the Dadeland South Metrorail Station on the north

Wednesday, May 31, 2017
6:00 p.m. – 8:00 p.m.
South Dade Regional Library
Auditorium
10750 SW 211 Street
Cutler Bay, Florida 33189

The Department of Transportation and Public Works is hosting this meeting to introduce the public to the South Corridor Rapid Transit Project. The South Corridor is being studied as a part of the Strategic Miami Area Rapid Transit (SMART) Plan, which identified the development of six rapid transit corridors that will directly support the mobility of our future population and employment growth. The meeting will begin at 6:00 p.m., with a formal presentation on the purpose of the project starting at 6:30 p.m. Graphic displays will be shown and DTPW representatives will be available to informally discuss the project and answer questions. If you have any questions or comments, please contact the DTPW Public Information Officer Karla Damian by telephone at (786) 469-5420, or by email at kdamian@miamidade.gov.

Public participation at this meeting is solicited without regard to race, color, national origin, age, gender, religion, disability or family status. Pursuant to the provisions of the Americans with Disabilities Act, any person requiring special accommodations to participate in this meeting is asked to advise the agency at least seven days before the meeting by contacting: Marcos Ortega at (786) 469-5225, or by email: marcos.ortega@miamidade.gov. If you are hearing or speech impaired, please contact the agency using the Florida Relay Service: 1 (800) 955-8771 (TDD) or 1 (800) 955-8770 (Voice).

REUNIÓN PÚBLICA DE INICIACIÓN

Proyecto de el Corredor del sur de Tránsito Rápido

¡Su opinión es importante!

South Dade Transitway entre la calle 344 del suroeste al sur, hasta la estación de Dadeland South del Metrorail en el norte

El Departamento de Transporte y Obras Públicas está realizando esta reunión con la finalidad de presentar al público el Proyecto sobre el Corredor de Tránsito Rápido en el sur del Condado Miami-Dade. Se está llevando a cabo un estudio del corredor del sur como parte del Plan de Tránsito Rápido en Áreas Estratégicas de Miami, conocido también como SMART Plan, el cual identificó el desarrollo de seis corredores de tránsito rápido que apoyarán directamente la movilidad de nuestra población futura y el crecimiento de empleos. La reunión comenzará a las 6:00 p.m. y una presentación formal sobre el objetivo del proyecto que comenzará a las 6:30 p.m. Habrá exhibiciones gráficas y representantes del DTPW presentes para explicar informalmente el proyecto y responder a preguntas. Si tiene cualquier pregunta o comentario, por favor comuníquese con Karla Damian, encargada de Información Pública del DTPW, por el número telefónico (786) 469-5420, o por correo electrónico a kdamian@miamidade.gov.

Miércoles, 31 de mayo del 2017
6:00 p.m. - 8:00 p.m.
Auditorio de la Biblioteca Regional de South Dade
10750 SW 211 Street, Cutler Bay, Florida 33189

Se solicita la participación del público sin importar la raza, color, origen nacional, edad, sexo, religión, discapacidad o estado familiar. De acuero con la Ley de Estadounidenses con Discapacidades, se agradece que toda persona que requiera ajustes especiales a fin de participar en esta reunión informe a la agencia con de 7 días de anticipación a través del siguiente contacto: Marcos Ortega por el (786) 469-5225, o por correo electrónico: marcos.ortega@miamidade.gov. Si tiene dificultades auditivas o del habla, por favor comuníquese con la agencia a través del servicio Florida Relay Service: por el 1 (800) 955-8771 (TDD) o por el 1 (800) 955-8770 (voz).

PALMETTO BAY

Village honors former clerk's late daughter

BY MONIQUE O. MADAN
mmadan@miamiherald.com

The playground at Coral Reef Park in Palmetto Bay now has its own name: Bridget Allison Pier Playground.

On May 13, village officials held a dedication and ceremony in honor of Bridget Allison Pier, the 7-year-old daughter of former village clerk Meighan Pier Alexander. Bridget died in 2011 after having a stroke while on vacation in Hawaii, a place she loved.

The dedication took place on what would have been her 13th birthday. The young girl attended Coral Reef Elementary School, which adjoins the park's playground area. The playground is currently being revamped.

Last year, a town hall meeting for children was held to gather ideas for the new playground equipment. At the park's dedication ceremony, some of those same students were part of a chorus that performed during the dedication. Many of Bridget's former first grade classmates also attended. Those who went were given Hawaiian necklaces.

Bridget died in Hawaii in 2011 during her mother's Makapuu one-year beach wedding anniversary celebration. One night after returning to the hotel room from a day of surfing, the blue-eyed girl suffered a stroke. She died days later.

Bridget loved the ocean and all the creatures in it, her mother said. She had expressed a deep desire to one day live in Hawaii. Because of Bridget's love for the island, her organs were donated to those who needed them in Hawaii. Her ashes were scattered in the Pacific Ocean.

Village of Palmetto Bay

Former classmates of Bridget Allison Pier, the late daughter of Palmetto Bay's former village clerk Meighan Pier Alexander, at the newly-named Bridget Allison Pier Playground.

Kick- Off Meeting Presentation

MIAMI-DADE COUNTY

Department of Transportation and Public Works (DTPW)

South Corridor Rapid Transit Project Public Kick-Off Meeting

Wednesday, May 31, 2017

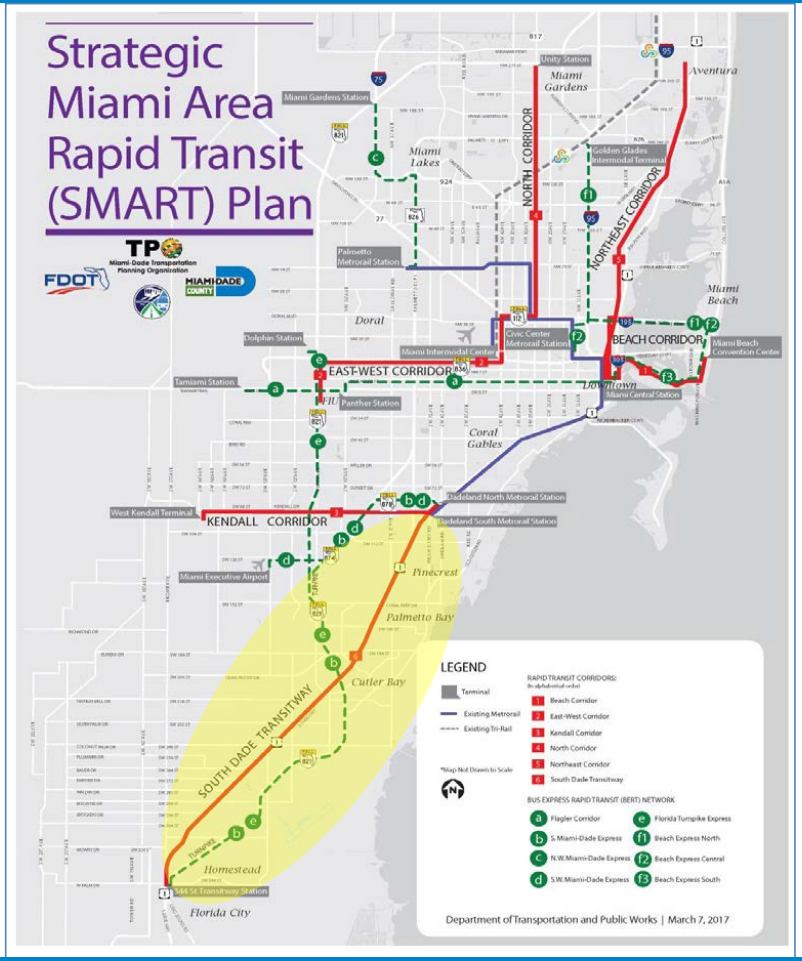

Meeting Overview

- Miami-Dade County SMART Plan
- South Corridor
- Project History and Timeline
- South Corridor History
- Transitway Existing Conditions
- Study Elements
- Project Scope and Purpose
- Existing Transit Facilities
- Project Schedule
- Study Objectives
- Technologies
- Public Involvement
- Locally Preferred Alternative

Miami-Dade County SMART Plan

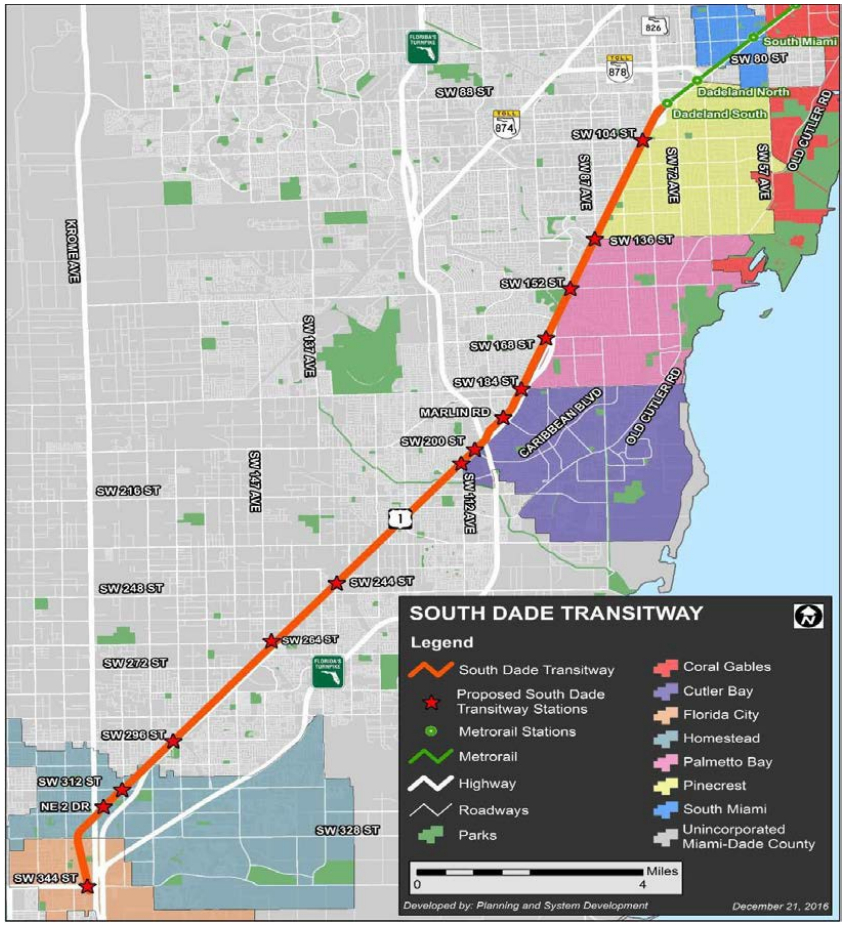

Six Corridors:

- Beach Corridor
- East-West Corridor
- Kendall Corridor
- North Corridor
- Northeast Corridor
- **South Corridor**

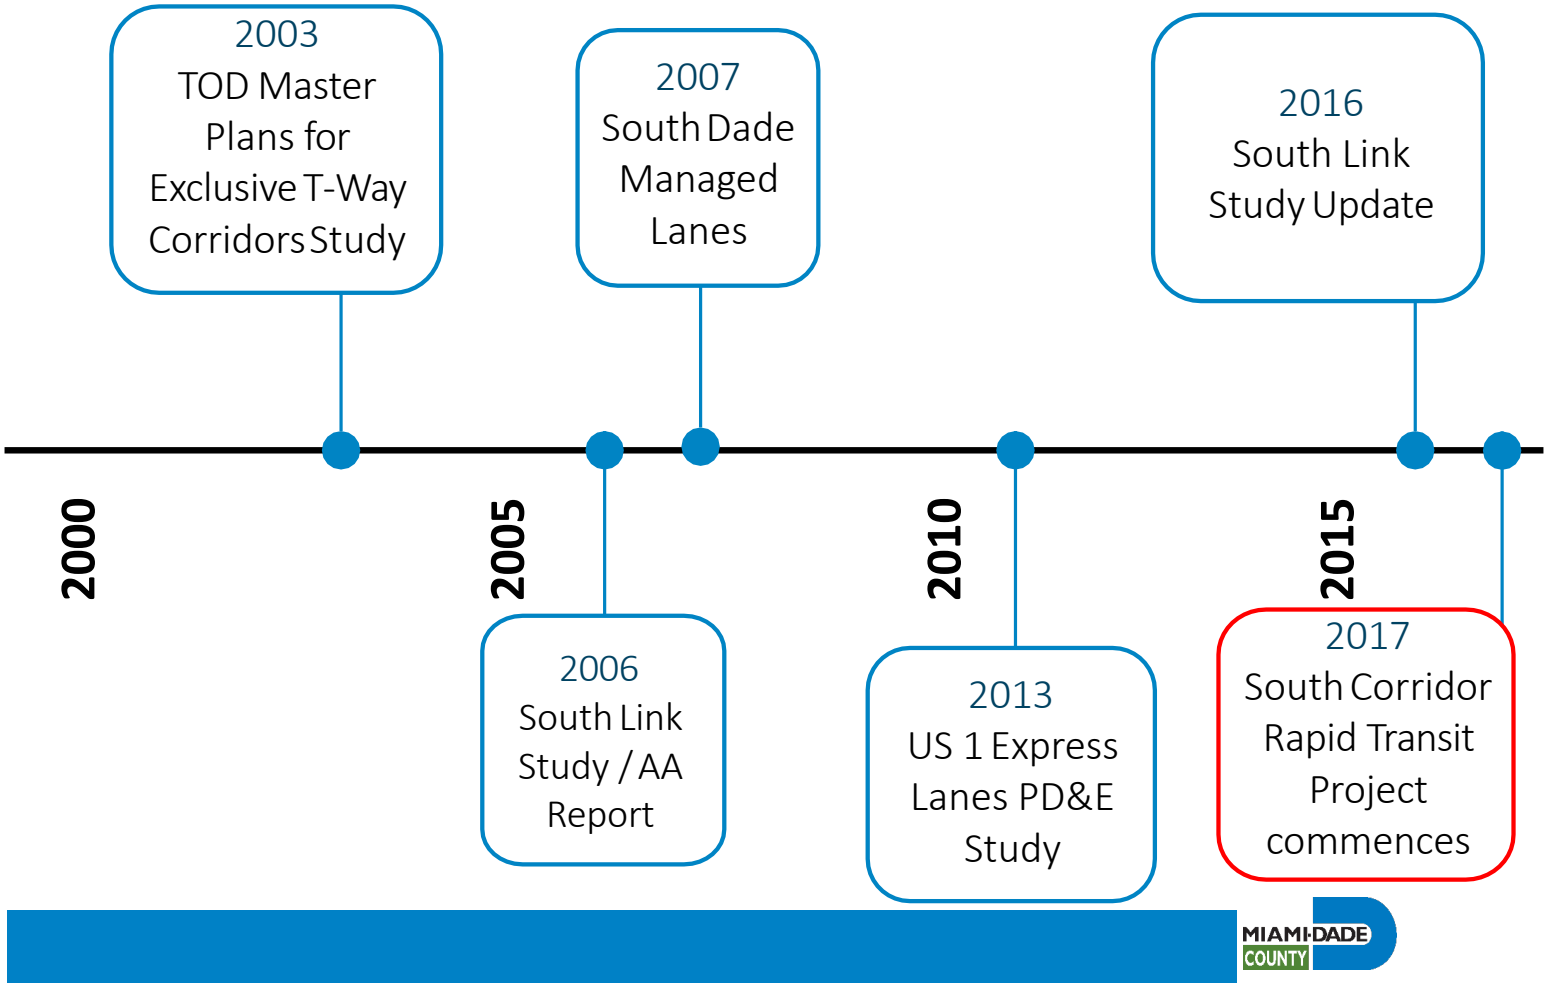

South Corridor

- Existing South Dade Transitway: Connects Dadeland South Metrorail Station with SW 344th Street in Florida City (approximately 20 miles)

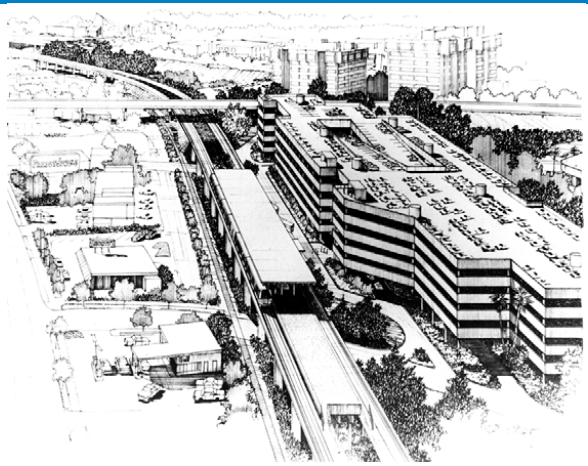

- Corridor Cities
  - Village of Pinecrest
  - Village of Palmetto Bay
  - Town of Cutler Bay
  - City of Homestead
  - City of Florida City

Project History Timeline

South Corridor History

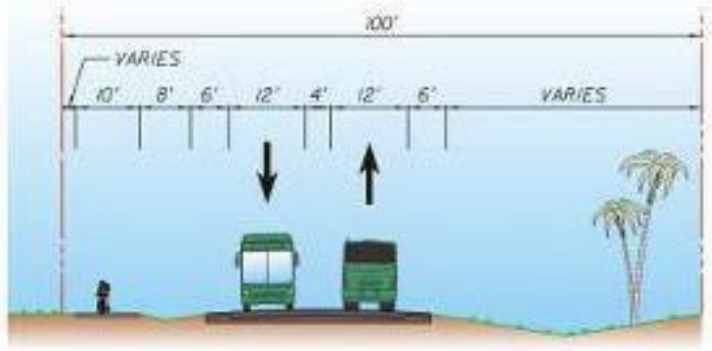

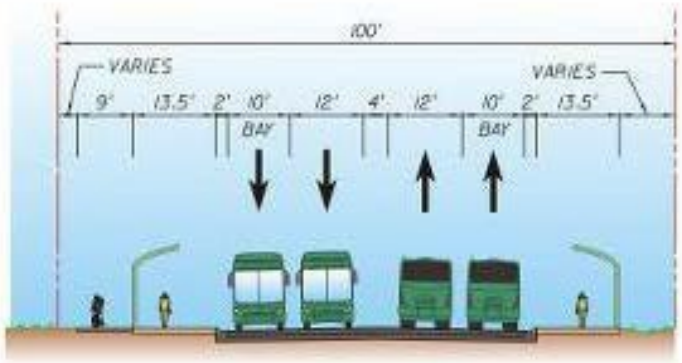

Transitway Existing Conditions

- Mostly 100-foot wide right-of-way for its entire length
- Designed for transit buses and emergency/ security vehicles
- One 12-foot wide bus lane per direction with 29 stations
- 8-10 foot wide bicycle/pedestrian path along the west side, separated from bus lanes by a swale
- Adjacent to US-1

Typical Roadway Section

Typical Station Section

Study Elements

Public Involvement

Continuous outreach and coordination with community and stakeholders

Data Collection

Review of existing conditions

Engineering Analysis

Develop and evaluate alternatives that meet the goals of the project

Environmental Evaluations

Identify potential impacts to social, natural, and physical environments

Project Scope and Project Purpose

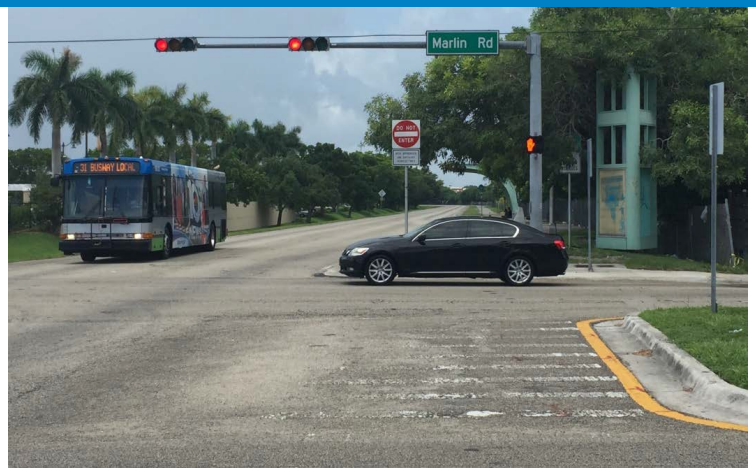

Project Scope

- Document Existing Conditions
- Develop Transit Mode Alternatives using Existing Transitway Alignment
- Station Stop Locations and Transit Terminals
- Multimodal Connections

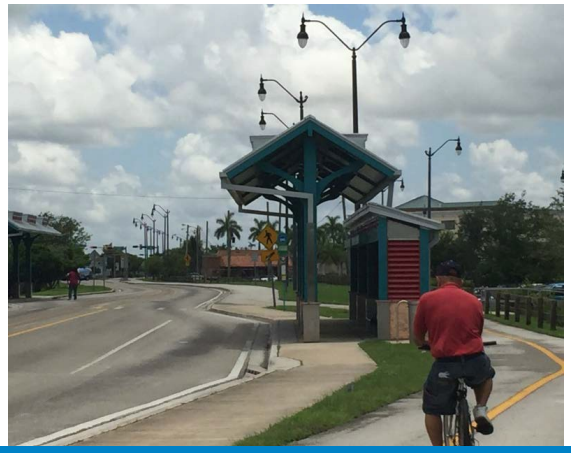

Project Purpose

- Improve Mobility
- Promote Connectivity
- Enhance Accessibility
- Stimulate Economic Development

Existing Transit Facilities

Project Schedule

Study Objectives: Evaluate Transit Alternatives

- At-Grade Metrorail Extension
- At-Grade BRT using the existing Transitway
- At-Grade Light Rail Transit
- Connected and Autonomous Vehicle (CAV) alternative

All alternatives will consider grade separations at major intersections

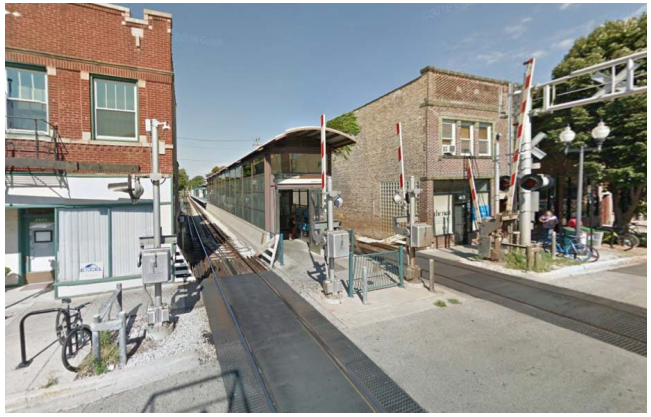

Review of Transit Technologies

Metrorail Extension	Bus Rapid Transit (BRT)	Light Rail Transit (LRT)	Connected and Autonomous Vehicles (CAV)

Selecting the Locally Preferred Alternative (LPA)

Purpose and Need

- Identify the need for transit investment
- Determine project goals and objectives
- Define evaluation criteria

Tier 1 Definition and Evaluation: Qualitative

- Identify the universe of alternatives
- Qualitative evaluation to determine feasibility

Tier 2 Definition and Evaluation: Quantitative

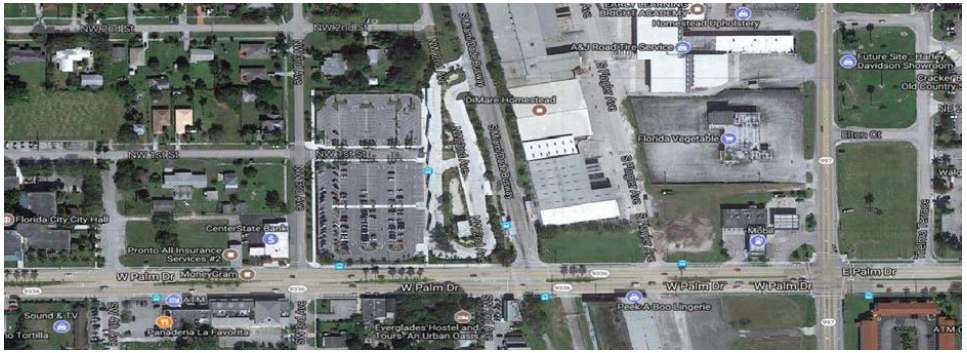

- Define the remaining alternatives in detail:
  - Develop operating plan
  - Generate ridership forecast
  - Estimate capital and O&M costs
- Evaluate the alternatives in detail

Selection of Locally Preferred Alternative (LPA)

North Terminus and Southern Terminus

Northern Terminus: Dadeland South Metrorail

Southern Terminus: SW 344th St.

NONDISCRIMINATION COMPLIANCE

Public participation at this meeting is solicited without regard to race, color, national origin, age, sex, religion, disability, or family status.

Persons wishing to express their concerns about Title VI may do so by contacting:

Allison Aristide
Title VI Coordinator
Miami-Dade Department of Transportation and Public Works
701 NW 1ST Court
Suite 1700
Miami, FL 33136
786-469-5473
Allison.Aristide@miamidade.gov

CUMPLIMIENTO DE NO DISCRIMINACIÓN

La participación del público en esta reunión es solicitada sin importar la raza, color de piel, nacionalidad, edad, sexo, religión, impedimentos físicos o situación familiar.

Aquellos que deseen expresar sus preocupaciones sobre el Título VI pueden hacerlo poniéndose en contacto con:

Allison Aristide
Coordinador del Título VI
Departamento de Transporte y Obras Públicas de Miami-Dade
701 NW 1ST Court
Suite 1700
Miami, FL 33136
786-469-5473
Allison.Aristide@miamidade.gov

KONFÒMITE KI PA DISKRIMINASYON

Nou mande patisipasyon popilasyon an san diskriminasyon ras, koulè po moun, peyi kotemoun soti, laj moun, fi oswa gason, relijyon, andikape oubyen si yon moun marye oswa li pamarye.
Si ou gen yon bagay pou di sou afè Tit VI la, ou kapab kontakte:

Allison Aristide
Tit VI Kòdonatè
Depatman Transpòtasyon ak Travo Piblik nan Miami-Dade
701 NW 1ST Court
Suite 1700
Miami FL 33136

Environmental Aspects of the Study

Social and Economic

- Social
- Economic
- Land Use Changes
- Mobility
- Aesthetic Effects
- Relocation Potential

Cultural

- Historic Sites/Districts
- Archaeological Sites
- Recreational Areas

Natural

- Wetlands and Other Surface Waters
- Aquatic Preserves and Outstanding FL Waters
- Water Quality and Water Quantity
- Floodplains
- Coastal Zone Consistency
- Coastal Barrier Resources
- Protected Species and Habitat
- Essential Fish Habitat

Physical

- Noise
- Air Quality
- Contamination
- Utilities and Railroads
- Construction
- Bicycles and Pedestrians
- Navigation

PROJECT PROCESS

Planning — Identifies long range transportation goals; defines purpose and need; considers potential environmental issues; conducts early screening of options; conducts work program meetings with local governments; initiates public involvement.

PD&E — Project Development & Environment refines the purpose and need; develops alternatives to meet the needs; evaluates environmental impacts; evaluates cost estimates; considers input from the public; identifies the Locally Preferred Alternative.

We are here

Design — Prepares construction plans; identifies right of way requirements.

Right of Way — Acquires the needed property; provides relocation assistance when needed.

Construction — Oversees project construction; conducts inspection of materials; manages impacts to minimize disruption of traffic.

Maintenance — Maintains facility (lighting, pavement, bridges, signs, etc.) throughout its design life as established by a planned schedule for servicing.

South Dade Transitway from SW 344th Street to the Dadeland South Metrorail Station

Corridor Workshops

The Miami-Dade County Department of Transportation and Public Works (DTPW) is hosting two interactive workshops for the South Corridor Rapid Transit Project. The South Corridor is one of six Strategic Miami Area Rapid Transit (SMART) Plan corridors being evaluated to assess and meet the travel and mobility needs of the County.

There will be no formal presentation. The same information will be shared at each workshop. It will take approximately 15-30 minutes to visit eight information stations at the workshop.

Monday, October 23, 2017
6:00 p.m. to 8:00 p.m.
The Falls Mall (Center Court)
8888 SW 136th Street
Miami, FL 33176
Enter at Red Robin and park at Talbots

Wednesday, October 25, 2017
6:00 p.m. to 8:00 p.m.
The Southland Mall (Fountain Area)
20505 S Dixie Highway
Cutler Bay, FL 33189
Enter and park near DSW and Ulta

For more information, visit www.miamismartplan.com or please contact the Public Information Officer, Karla Damian, at (786) 469-5420, or send an email to: Karla.Damian@miamidade.gov.

The workshops will follow an open-house format to allow participants to arrive at any time between 6:00 p.m. and 8:00 p.m. DTPW representatives will be available to informally discuss the project and answer questions. Public participation at this meeting is solicited without regard to race, color, national origin, age, gender, religion, disability or family status. Pursuant to the provisions of the Americans with Disabilities Act (ADA), any person requiring special accommodations to participate in this meeting is asked to advise the agency at least 7 days before the meeting by contacting: Marcos Ortega at (786) 469-5225, or at marcos.ortega@miamidade.gov. conchita ESPINOSA ACADEMY

CEA is more than a school.
It is a place where children learn more about more,
where the seeds of curiosity and compassion are
cultivated from the start. At CEA, your child is
encouraged to take chances and to always do his or her best.
This guided process of self-discovery instills in your
child's heart a resilience and confidence that will last a lifetime.
Analytical, imaginative, confident, and ever-kind,
CEA alumni follow their dreams – and,
more often than not – they live them.

over 80 years educating children

Hogares de siete municipios de La Habana recibirán internet

EFE
LA HABANA

El servicio de internet en los hogares en Cuba estará disponible desde finales de octubre en zonas seleccionadas de siete municipios de La Habana, donde hasta ahora solo lo tenían áreas de dos de ellos, informó el domingo el monopolio estatal de las comunicaciones en la isla, Etecsa.

La prestación del "Nauta Hogar" -como se denomina el servicio de internet desde las casas de los cubanos- llegará a 12 zonas específicas, elegidas por las condiciones técnicas de las redes telefónicas para la transmisión de datos, según explicó la responsable del proyecto en Etecsa, Amarelys Rodríguez.

El proyecto beneficiará a una parte de los clientes de telefonía fija residentes en los municipios de La Habana Vieja, Centro Habana, Plaza de la Revolución, Habana del Este, San Miguel del Padrón, La Lisa y Playa, de la capital cubana, precisó Rodríguez citada por la estatal Agencia Cubana de Noticias (ACN).

Además, aclaró que se han modificado la tarifa y la velocidad de conexión, y si antes el usuario pagaba 15 pesos convertibles (CUC, equivalente al dólar) por un servicio de ancho de banda de 256 kilobytes por segundo (kb/s), en la actualidad por ese mismo precio obtiene un megabyte (mb/s).

A pesar de ello las tarifas siguen lejos del alcance de los bolsillos de muchos cubanos, ya que el salario promedio de un trabajador estatal en la isla apenas alcanza los $30 mensuales.

Entre diciembre del 2016 y febrero de este año, 858 hogares de La Habana Vieja recibieron el servicio "Nauta Hogar" gratis como parte de una prueba piloto para iniciar la comercialización gradual, y tras finalizar el ensayo, desde marzo Etecsa comenzó a ofrecer el servicio en esa zona, donde cifra en más de 600 los contratos.

A finales de septiembre pasado, Etecsa anunció la extensión del acceso a internet a todos los hogares de Cuba antes de que termine el 2017, y comenzó por otras cinco provincias de la isla.

Hasta entonces solo tenían acceso al servicio clientes de las áreas de los barrios Catedral y Plaza Vieja, en La Habana Vieja, que habían participado en la prueba piloto.

En Cuba, uno de los países con menor tasa de conectividad en el mundo, no estaba permitida la conexión a internet en los hogares, excepto a algunos profesionales como médicos, abogados, periodistas o funcionarios de alto rango.

La directora de la División La Habana de Etecsa, Odalys Rodríguez del Toro, dijo que la empresa asumió el compromiso de permitir el acceso a Nauta Hogar desde al menos una zona de cada municipio, lo que se producirá paulatinamente.

"Estamos estudiando el resto de los territorios de la provincia para identificar aquellos con mejores condiciones técnicas en la red que permitan ofrecer un servicio de calidad", señaló la directiva.

Cuba registró más de 4.5 millones de usuarios de internet en el 2016, lo que significa 403 usuarios conectados por cada 1,000 habitantes, y junto a las salas de navegación en oficinas de Etecsa, suman 1,006 los espacios de conexión en el país, según reportes oficiales.

En la isla hay registrados 1,152,900 computadores, de ellos 628,700 con conexión a la red y en el 2015 existían 996,003 líneas telefónicas fijas de uso residencial para una población de 11.4 millones de habitantes, de acuerdo con datos de la Oficina Nacional de Estadística (Onei).

Dentro de la estrategia del gobierno de la isla para aumentar la conectividad -una de las asignaturas pendientes de Cuba-, Etecsa inició en julio del 2015 la instalación de zonas wifi en espacios públicos, donde la conexión cuesta $1.5 la hora.

MÉXICO

Asesinan a líder izquierdista y otras personas

Las autoridades en el sur de México informaron que desconocidos asesinaron y quemaron a un líder regional de izquierda, junto con su esposa, su suegra de 94 años y un conductor.

Roberto Álvarez Heredia, vocero de los cuerpos de seguridad del estado de Guerrero, dijo el domingo que las identidades de Ranferi Hernández Acevedo y quienes lo acompañaban fueron totalmente confirmadas.

Dijo que los cuerpos fueron encontrados dentro de una camioneta incendiada en la carretera Chilapa-Ahuacotzingo poco antes de la medianoche. El municipio de Ahuacuotzingo es una zona de Guerrero disputada por bandas de narcotraficantes. Los funcionarios no tenían sospechosos por ahora.

Hernández Acevedo fue miembro fundador de la principal facción izquierdista mexicana y dirigió el Partido de la Revolución Democrática en el estado. Mientras fungió como legislador estatal, huyó al exilio después de enfrentarse a un gobernador.

BRASIL

Temer valora canonización de 30 mártires

El presidente brasileño, Michel Temer, consideró la canonización de los primeros 30 mártires que hubo en el país, proclamada el domingo por el papa Francisco, como un "mensaje de paz" que invita a la "solidaridad" en un mundo de "extremismos".

Los nuevos santos brasileños, proclamados el domingo por Francisco en El Vaticano junto a un español, un italiano y tres niños indígenas mexicanos, están encabezados por los sacerdotes Andrés de Soveral, Ambrósio Francisco Ferro y el laico Mateus Moreira, que con otros 27 compañeros fueron asesinados entre el 16 de julio y el 3 de octubre de 1645.

Los responsables de ese hechos fueron protestantes calvinistas holandeses instalados en el norte de Brasil en aquella época, que en esa región estuvo marcada por profundos conflictos religiosos.

Los 30 mártires de Cunhaú y Uruaçu, como se les recuerda y venera desde hace siglos en Brasil, habían sido beatificados en marzo del 2000 por el papa Juan Pablo II.

Piñera promete corregir reformas de Bachelet si gana comicios

AFP
SANTIAGO DE CHILE

El ex mandatario chileno Sebastián Piñera, favorito para ganar las elecciones generales del próximo 19 de noviembre, prometió "corregir", en caso de resultar electo, las grandes reformas implementadas por la socialista Michelle Bachelet.

Sólido al frente de todos los sondeos, con una intención de votos del 44%, Piñera aseguró en una entrevista con el diario *La Tercera* que su intención es hacer un gobierno "muy distinto al actual".

En esta línea, aseguró que modificará la reforma laboral, tributaria y educacional implementadas por la mandataria socialista.

"Las reformas tributarias, educacional y laboral tienen fallas estructurales que vamos a corregir", afirmó el exmandatario, que entregó el poder en el 2014 a Bachelet después de un primer gobierno de cuatro años (2010-2014).

Durante su primer año de gobierno, Bachelet logró aprobar una reforma tributaria destinada a financiar la reforma educativa a partir de una mayor recaudación fiscal (3% del PIB, equivalente a unos $8,300 millones), aumentando los impuestos a las empresas.

Con la promesa de instaurar educación pública, gratuita y de calidad, Bachelet inició también una ambiciosa reforma para acabar con el sistema educativo heredado de la dictadura de Augusto Pinochet.

La reforma eliminó la selección de estudiantes y acabó con los copagos por parte de los padres en los establecimientos que reciben aportes del Estado. Unos 380,000 estudiantes universitarios estudian gratis, aunque la gratuidad total quedó comprometida en plazos que dependen de variables económicas.

Al mismo tiempo, se aprobó una reforma laboral que reestableció el derecho a huelga efectiva.

"La reforma tributaria frenó el crecimiento, la inversión, la innovación y el emprendimiento. La reforma laboral frenó la capacidad de crear empleo y transfirió el poder desde el trabajador a los sindicatos. La reforma educacional tiene a la educación estancada", dijo Piñera.

El empresario, no obstante, aseguró que no quitará la gratuidad de la que goza el 60% de los estudiantes de educación superior más pobres del país.

ARGENTINA

Rompehielos vuelve a Antártida para pruebas de expedición

El histórico buque rompehielos de la Armada argentina, el Almirante Irízar, emblema de las campañas de expedición en la Antártida, zarpó el domingo desde Ushuaia rumbo a la Antártida donde realizará las primeras pruebas de preparación para su vuelta definitiva, informaron fuentes oficiales.

El objetivo de estas pruebas es comprobar que el buque polar puede navegar en aguas frías y de hielo de diferentes características, y así verificar que el proceso de reconstrucción y modernización al que fue sometido fue efectivo.

El primer tipo de pruebas constarán en la navegación en campo de hielo plano a velocidad y potencia constante para determinar la capacidad continua de rotura del buque hasta un metro de espesor uniforme.

Por otra parte se determinará la fuerza de introducción al hielo de un espesor superior a tres metros por "impacto o ramming".

MIAMI-DADE COUNTY

Aviso Público

Departamento de Transporte y Obras Públicas

Proyecto del Corredor del Sur (South Dade Transitway)

Arteria vial del sur de Miami-Dade desde la calle 344 del suroeste hasta la Estación de Metrorail de Dadeland South

Talleres de Corredores

El Departamento de Transporte y Obras Públicas (DTPW por sus siglas en inglés) del Condado de Miami-Dade está auspiciando dos talleres interactivos para el Proyecto de Vías de Tránsito Rápido en South Dade (***South Corridor Rapid Transit Project***). El corredor sur (South Corridor) es uno de los corredores viales del Plan de Tránsito Rápido en Áreas Estratégicas de Miami (también llamado SMART Plan, en inglés) que está en proceso de evaluación para determinar y satisfacer las necesidades de viaje y movilidad del condado.

No habrá presentación formal. En cada taller se difundirá la misma información. Habrán ocho estaciones con información. El recorrido de las ocho estaciones informativas del taller tardará aproximadamente de 15 a 30 minutos.

lunes, 23 de octubre de 2017
6:00 p.m. a 8:00 p.m.
The Falls Mall (área central)
8888 SW 136th Street
Miami, FL 33176
Entre por Red Robin y estacione cerca de Talbots

miércoles, 25 de octubre de 2017
6:00 p.m. a 8:00 p.m.

Miami-Dade County SMART Plan

Six Corridors:

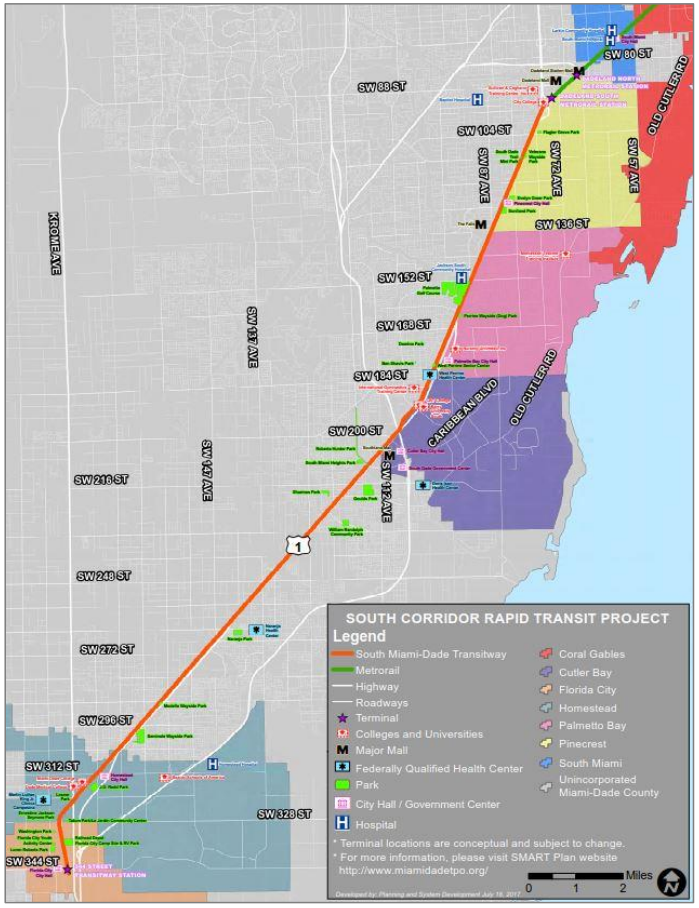

- Beach Corridor
- East-West Corridor
- Kendall Corridor
- North Corridor
- Northeast Corridor
- **South Corridor**

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

South Corridor - Description

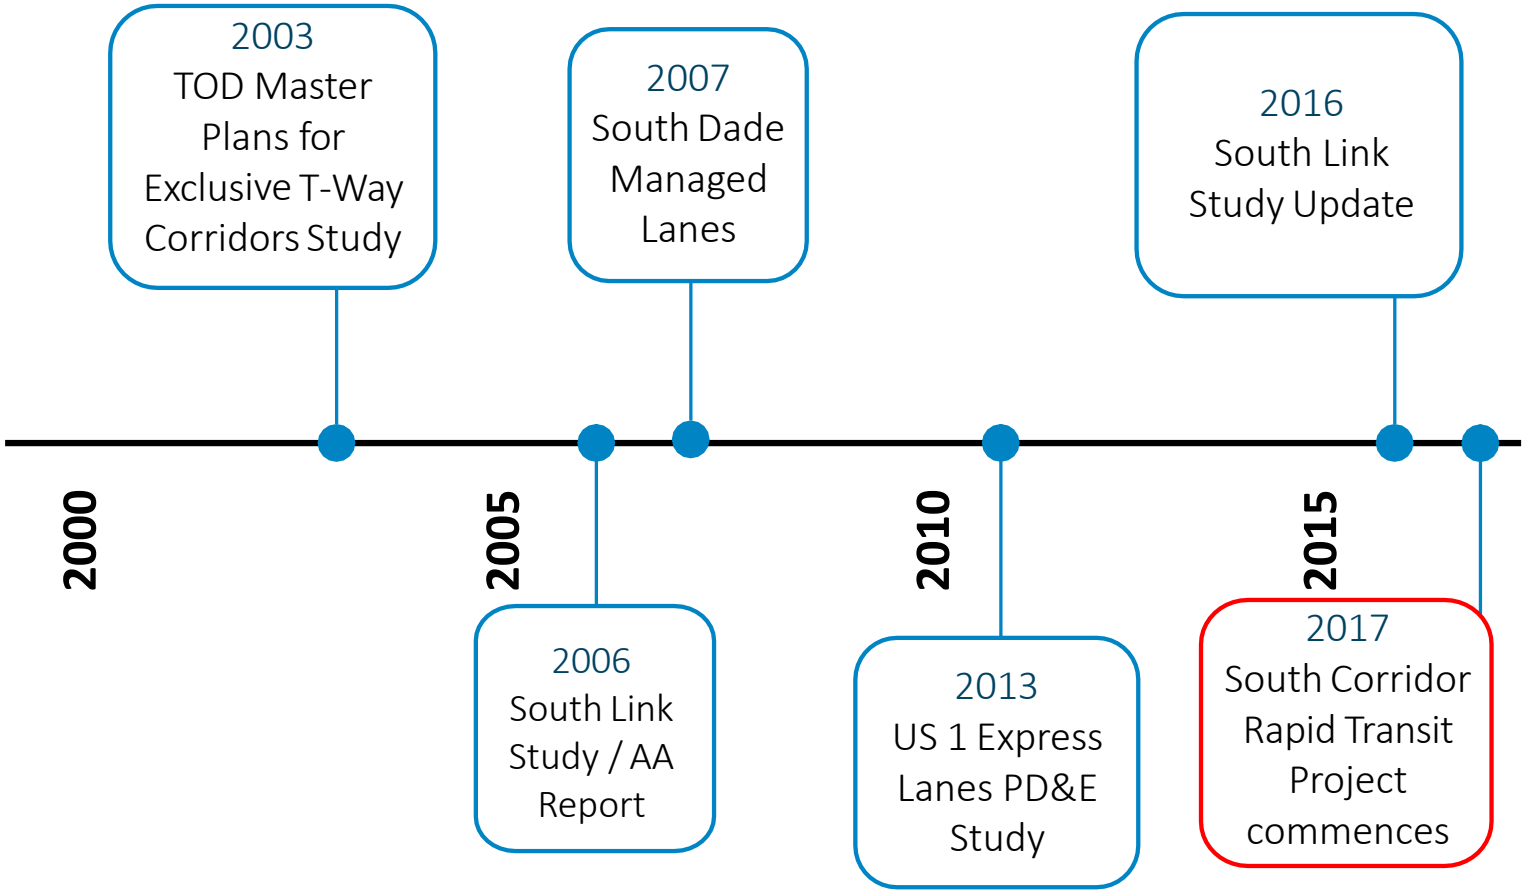

- Existing South Dade Transitway: Connects Dadeland South Metrorail Station with SW 344th Street in Florida City (approximately 20 miles)

- Corridor Cities
  - Village of Pinecrest
  - Village of Palmetto Bay
  - Town of Cutler Bay
  - City of Homestead
  - City of Florida City

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Project History & Timeline

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Study Elements

Public Involvement	Continuous outreach and coordination with community and stakeholders
Data Collection	Review of existing conditions
Engineering Analysis	Develop and evaluate alternatives that meet the goals of the project
Environmental Evaluations	Identify potential impacts to social, natural, and physical environments

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Project Scope

- Document Existing Conditions
- Develop Transit Mode Alternatives using Existing Transitway Alignment
- Station Locations and Transit Terminals
- Multimodal Connections

Project Purpose

- Improve Mobility
- Promote Connectivity
- Enhance Accessibility
- Stimulate Economic Development

Study Objectives: Evaluate Transit Alternatives

- At-Grade Metrorail Extension
- At-Grade Rapid Transit Service (RTS) using the existing Transitway
- At-Grade Light Rail Transit
- Connected and Autonomous Vehicle (CAV) alternative

All alternatives will consider grade separations at major intersections

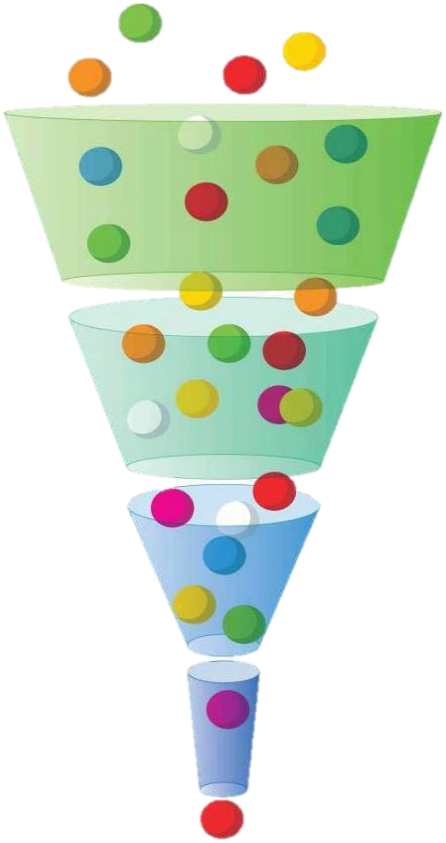

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Public Engagement

- Elected Officials and Agency Kick-Off Meeting
- Public Kick-Off Meeting
  - Outreach
    - Property Owner Notices
    - Advertisements (Miami Herald and El Nuevo Herald)
    - Meeting Notice Distribution
      - Metrorail Station
      - Park-and-Ride Lots
      - Public Facilities (18 locations)
- DTPW Social Media and Municipal Networks
- Unscheduled Meetings
- Fact Sheets (English and Spanish)
- Corridor Workshops - Fall 2017
- Project Website: www.miamismartplan.com

#MiamiSMARTPlan

Selecting the Locally Preferred Alternative (LPA)

Purpose and Need

- Identify the need for transit investment
- Determine project goals and objectives
- Define evaluation criteria

Tier 1 Definition and Evaluation: Qualitative

- Identify the universe of alternatives
- Qualitative evaluation to determine feasibility

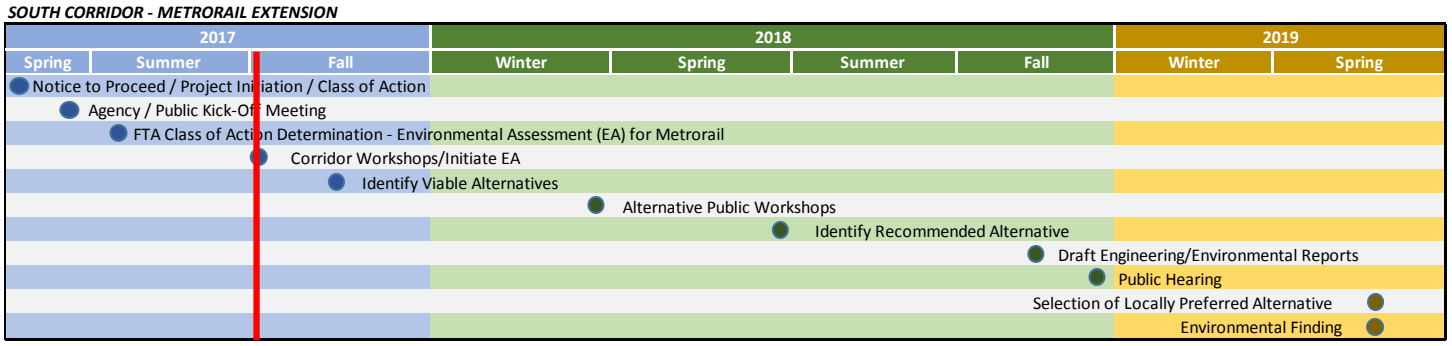

Tier 2 Definition and Evaluation: Quantitative

- Define the remaining alternatives in detail:
  - Develop operating plan
  - Generate ridership forecast
  - Estimate capital and O&M costs
- Evaluate the alternatives in detail

Selection of Locally Preferred Alternative (LPA)

Thornton Place, Seattle

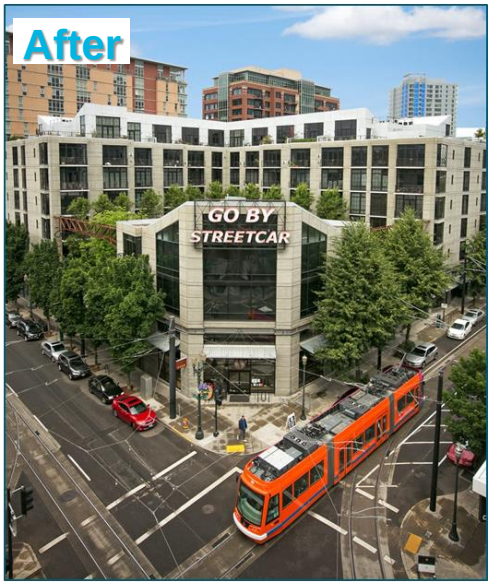

Left: The creek/greenbelt serves as a park and water treatment facility, purifying water as it passes through.
Right: Site was laid out to create a compact development, making it easy for residents to walk throughout with minimal road crossings
Source: Thortonplaceliving.com

Pearl District, Portland

MIAMI-DADE COUNTY

Left: Jamison Square park provides a family friendly environment, the focal point of the park is a fountain which simulates a shallow tidal pool.

Right: The walkable Pearl District provides a great setting creating a top shopping destination.

STATION #6: STATION AREA COMPARISON

6

October 23-25, 2017

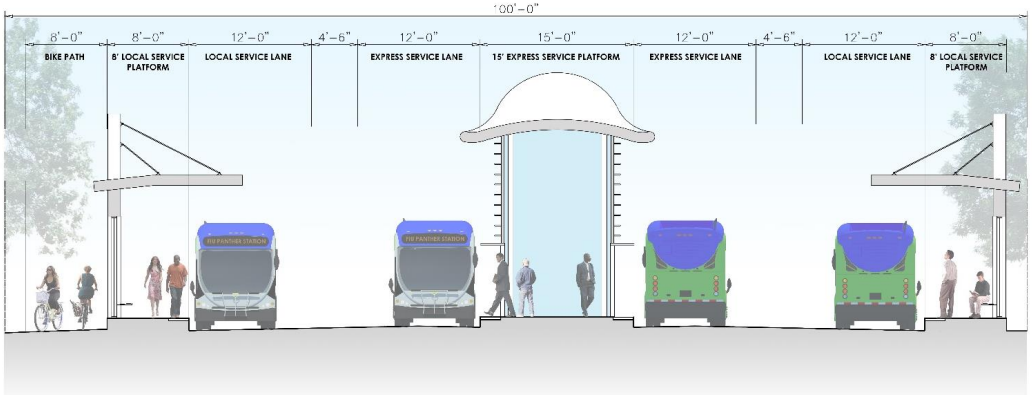

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

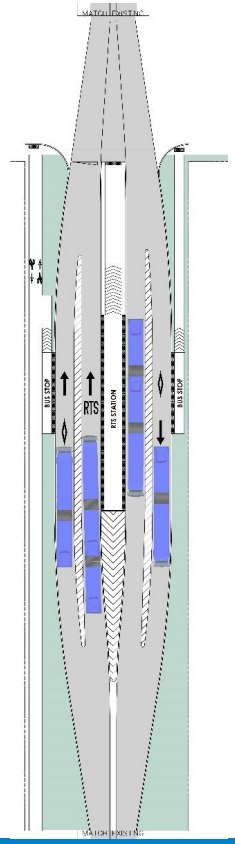

Features Common to all Alternatives

- Bicycle and pedestrian shared path to remain
- Emergency vehicle access to remain
- Center platforms for all transit alternatives
- Improved lighting at stations
- Improved transit station amenities
- Improved intersections with safety elements

Rapid Transit Service Alternative

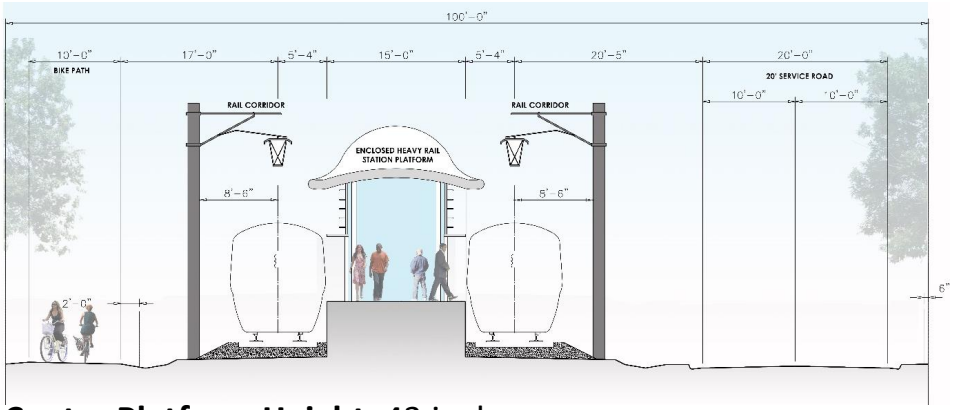

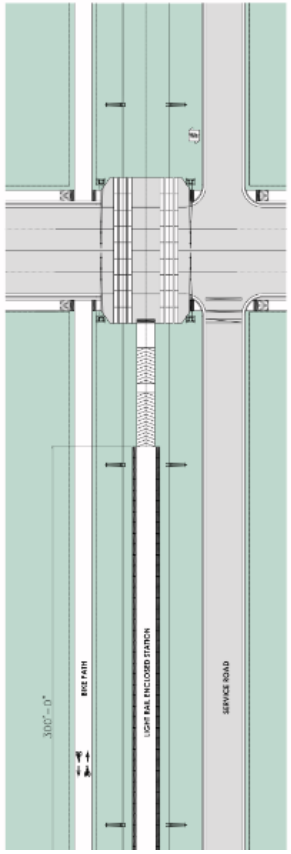

Center Platform Height: 12 inches
Center Platform Width: 15 feet
Center Platform Length: 120 to 150 feet
Configuration: Center platform with bypass lanes end loaded from north
Special needs: Storage and Light Maintenance Facility (at Homestead Air Force Base)

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Metrorail Alternative

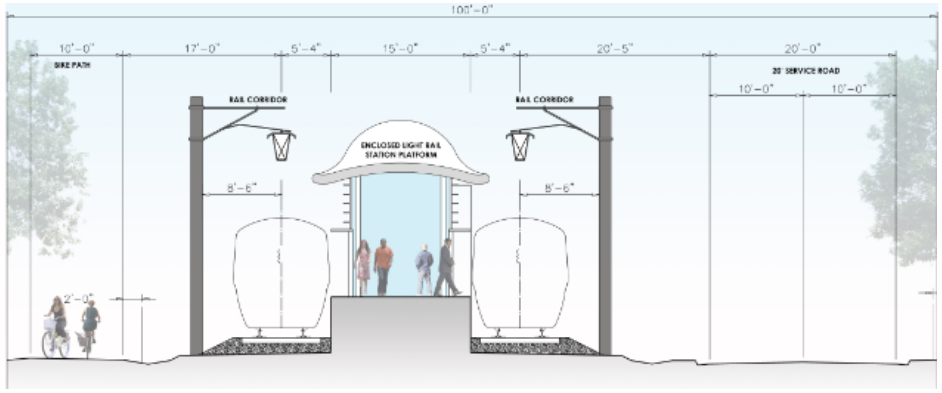

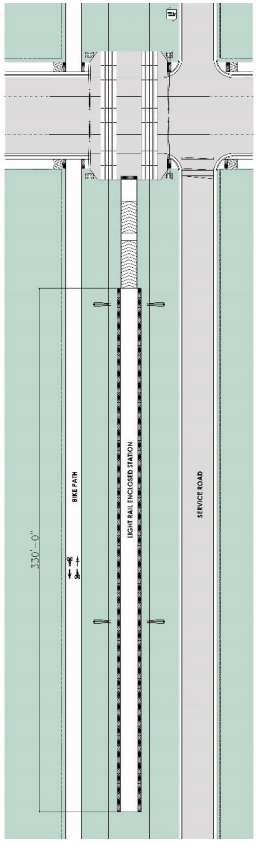

Center Platform Height: 43 inches
Center Platform Width: 15 feet
Center Platform Length: 330 to 456 feet
Configuration: Center platform end loaded from north side
Special needs: None, interlines with existing Metrorail at Dadeland South, a spur track will be needed between the mainline and the Storage and Maintenance Facility

Light Rail Alternative

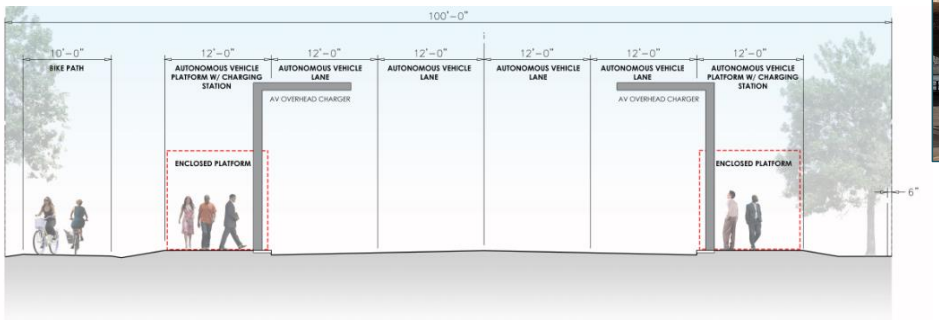

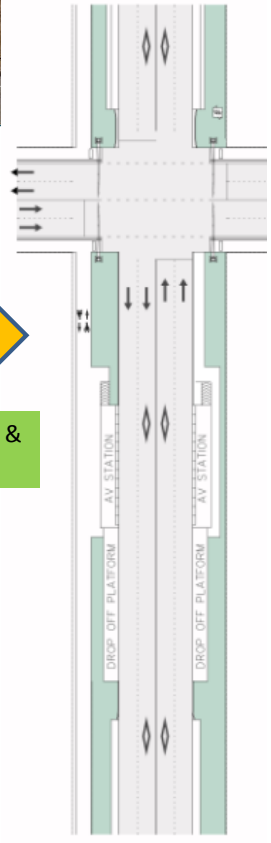

Center Platform Height: 14 inches
Center Platform Width: 15 feet
Center Platform Length: 200 to 250 feet in each direction north and south
Configuration: Center platform end loaded from north side
Special needs: Storage and Maintenance Facility at Homestead Air Force Base (~ 12 acres)

Connected Autonomous Vehicle Alternative

Platforms: Retain existing transit stations/layout
Travel Lanes: Expand to four continuous lanes
CAV facilities: Designate pick up/drop off areas in park-and-ride lots
Storage: Provide 5 to 10 stalls for CAV parking/recharging

Rapid Transit Service Alternative

https://youtu.be/QQZkrobhQhk

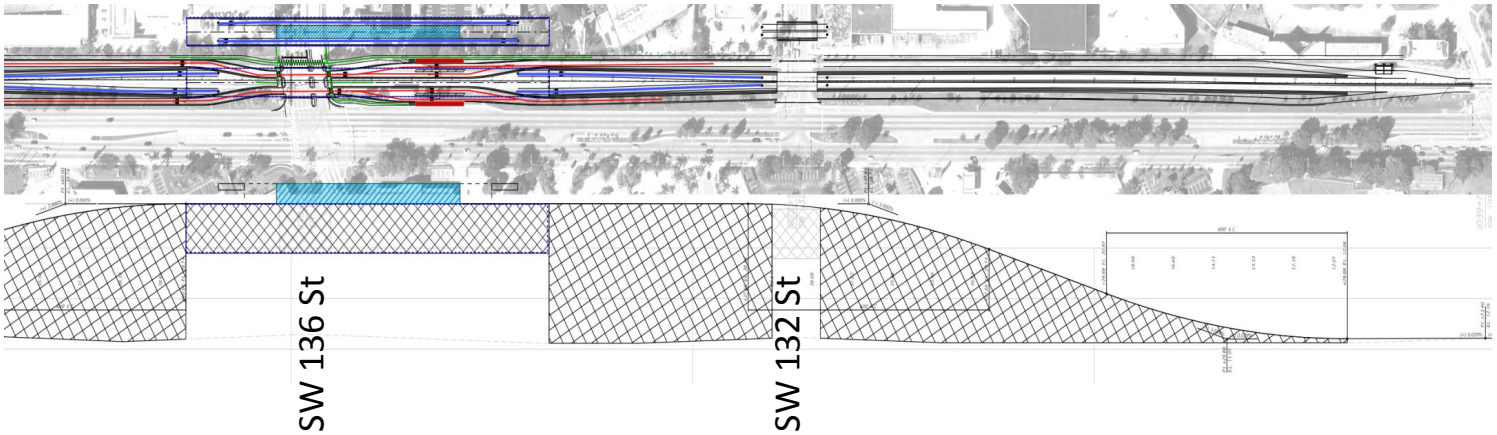

Enclosed Station Platform (104th Street)

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Potential Grade Separation (136th St to 132nd St)

Length of structure: Approx. 3,000 feet
Height of structure: 20 – 25 feet
Elevated Station
Width of Structure:
- Center Platform Station: 54 feet
- Touch Down Location: 35 feet

MIAMI-DADE COUNTY

I am extremely concerned about land use changes & zoning changes to acquire property in order to build Multi-Unit residences along the corridor. I am against the "land use types" that have any commerical or retail because that involves Garbage trucks, commercial delivery trucks, noise, trash, etc.

WHY IS ABOVE GRADE COST NOT BEING CONSIDERED OR DISCUSSED. IE TRANSIT MODE COMPARISON CHART SHOULD INCLUDE ABOVE GRADE. COSTS. A LOT IN COMMUNITY WANT HEAVY RAIL BUT ONLY IF ELEVATED AND NOT AT GRADE. WE SHOULD BE GIVEN THIS AS AN OPTION TO CONSIDER COSTS.

Re-visit the use of the busway for express lane traffic during rush hour. People may be more willing to pay the toll now that the traffic is so bad.

Cross traffic sometimes 4 light changes can be as much as 20 min. Will each of these affect that. Not sure there is the space to do Bridges at every intersection. Like the Upzoning to make more walkable. would be nice if do it before Built.

I OWN THE LARGE 110,000 S/F BUILDING ON THE BUSWAY and S.W. 186th St. - YOUR PLAN TO BUILD GRADE SEPARATIONS AT SW. 154th & SW. 186th Street would BE A TERRIBLE EYESORE AND WOULD BLOCK MY COMMERCIAL TENANTS VISABILITY! THIS COULD REALLY HURT THEIR BUSINESS! THE [redacted] Extremely High Cost of Light or Heavy RAIL MAKES THESE OPTIONS OUT OF THE QUESTION! I DO NOT WANT ANY MORE OR HIGHER TAXES! I AM FOR RTS-BUS-COST ADVANTAGE IS CLEAR CHOICE! Better Timing Controls that are now being INSTALLED will help A LOT!

I live across from The Falls, and I walk everywhere within reason. I would love for the train to come down to SW 136th Street, if not all the way to Florida City. I definitely would ride it often. I don't care what it looks like, just build it, Please.

I live close to 77th Ave + US 1, Since the building of the Busrail near US I, over the last ten years, I have seen uneven terrain in the form of dips + crevices in my back + front yards. My concern is the development of sinkholes with such construction.

Corridor Workshop #2:

Comment Cards

South Corridor Rapid Transit Project/*Proyecto del Corredor del sur de Tránsito Rápido*
Corridor Workshops/*Talleres de Corredores*
COMMENT CARD/*HOJA DE COMENTARIOS*

Which workshop are you attending?/*¿A cuál taller está asistiendo usted?*

☐ **The Falls - Monday, October 23, 2017**
lunes 23 de octubre de 2017

☑ **Southland Mall - Wednesday, October 25, 2017**
miércoles 25 de octubre de 2017

#1. It's absurd for a modern RTS to stop for vehicular traffic. If that means raising transit across roadways intersecting the Transitway; Then please do it. You Must do it!
#2. Where did the ½¢ billion of addl sales tax to pay for new (not existing) transit go?
#3. Consider emergency vehicle usage
#4. If taxes honestly need to be raised, then explain to the public why, & have the will to do it. Then be a good Steward of our money. We are not all up-in-arms raising taxes. We just want our $$ to be well spent.
#5 Consider on-call autonomous vehicles for home to station pick-up (driverless)
#6 Thank you to those among st you who are working diligently on this project.

Need single seat ride from Homestead to downtown!

Need bike lockers at key transit locations!

Bike share, Uber, Lyft, better pick-up + drop off at park + ride lots!

Need options to avoid getting into car at train stations when Metrobus is not the best choice - multi-modal options needed!

This workshop was very informative. I'd like to see this Rapid Transit take place on the 244 STREET Busway. There are many residential projects as we speak and the Rapid Transit Commute will help residents alleviate with daily traffic as well as to the Comerces in the 244 STREET Busway.

Extremely dissapointed that Alternative 5 (elevated Metrorail from Dadeland to FL City) is not being considered - Alt 5 is the safest, most efficient, fastest, least CO_2 generating, avoids congestion on crossing streets - AND IS THE BEST ALTERNATIVE - We must find the funding!!

☐ **The Falls - Monday, October 23, 2017**
lunes 23 de octubre de 2017

☑ **Southland Mall - Wednesday, October 25, 2017**
miércoles 25 de octubre de 2017

If you look for a lower cost (affordable) solution, that is elevated (grade separated) for speed & safety, and automated for low op cost, you come to PRT/GRT, not the same looser mass transit.

#1. It's absurd for a modern RTS to stop for vehicular traffic. If that means raising transit across roadways intersecting the Transitway; Then please do it. You Must do it!
#2. Where did the ½¢ billion of addl sales tax to pay for new (not existing) transit go?
#3. Consider emergency vehicle usage
#4. If taxes honestly need to be raised, then explain to the public why, & have the will to do it. Then be a good Steward of our money. We are not all up-in-arms raising taxes. We just want our $$ to be well spent.
#5 Consider on-call autonomous vehicles for home to station pick-up (driverless)
#6 Thank you to those among st you who are working diligently on this project.

Miami Dade NAACP

Position re South Dade Transit

The Miami Dade Branch of the NAACP strongly supports the fulfillment of the commitment to extend metrorail to Florida City. However the transit issue is broader than just building metrorail on the current busway. For metrorail to have optimal use, there must be efficient feeder patters from residential areas and currently numerous Black communities do not have easy access. Lower income areas in general must be a priority as they are less likely to have cars to drive to the park and ride areas or have someone who can drive them there. The development of the Metrorail line and stops must provide opportunities for Black workers and contractors. A common South Dade complaint is that building goes on in Black communities' bur no Black persons are seen at the construction sites. Furthermore the metrorail will create economic and housing opportunities. The planning for these must be inclusive, unlike the recent building of a four story homeless housing apartment building in a single family home Black residential area near the busway in Goulds that residents became aware of when ground was broken next to their backyards. Again no Black workers were seen. The NAACP wants the neighborhoods involved in the planning at all stages (not limited to a charet held years before building starts) and in the economic benefits of jobs both in the construction and post construction stages.

South Corridor Rapid Transit Project

South Dade Transitway from SW 344th Street on the south to the Dadeland South Metrorail station on the north

The Miami-Dade County Department of Transportation and Public Works (DTPW) is hosting three Alternatives Public Workshops regarding the South Corridor Rapid Transit Project. The South Corridor is one of six Strategic Miami Area Rapid Transit (SMART) Plan corridors being evaluated to assess and meet the safety and mobility needs of the county.

The interactive workshops will follow an open-house format to allow participants to arrive at any time between 6:00 p.m. - 8:00 p.m. to review and give input on the transit mode alternatives and station concepts. No formal presentation will be given. It will take 15-30 minutes to visit seven information booths at the workshop. DTPW representatives will be available to informally discuss the project and answer questions. **The same information will be shared at each workshop.**

If you have any questions or comments, please contact the DTPW Public Information Officer Charesse Chester by telephone at (305) 944-7564, or by email at: smartsouth@miamidade.gov.

Please choose the date and location that is best for you.

Public participation at this meeting is solicited without regard to race, color, national origin, age, gender, religion, disability or family status. Pursuant to the provisions of the Americans with Disabilities Act (ADA), any person requiring special accommodations to participate in this meeting is asked to advise the agency at least 7 days before the meeting by contacting: Marcos Ortega at: (786) 469-5225, or by email: marcos.ortega@miamidade.gov. If you are hearing or speech impaired, please contact the agency using the Florida Relay Service: 1 (800) 955-8771 (TDD) or 1 (800) 955-8770 (Voice).

TALLERES PÚBLICOS DE ALTERNATIVAS

Proyecto del Corredor Sur de Tránsito Rápido

South Dade Transitway entre la calle 344 del suroeste al sur, hasta la estación de Dadeland South del Metrorail en el norte

El Departamento de Transportate y Obras Públicas (DTPW) del Condado de Miami-Dade realizará tres talleres públicos de alternativas para el Proyecto de Tránsito Rápido del Corredor Sur. El Corredor Sur es uno de los seis corredores estratégicos del Plan Estratégico para el Tránsito Rápido de Miami que se están evaluando para determinar y satisfacer las necesidades de seguridad y movilidad en el condado. Vea el mapa al reverso de este boletín.

Los talleres interactivos siguen un formato de puertas abiertas para que los participantes puedan llegar a cualquier hora entre las 6:00 p.m. y las 8:00 p.m. a fin de conocer y dar su opinión sobre las alternativas de modos de transporte propuestas y los conceptos de estaciones. En vez de dar una presentación formal, van a haber siete estaciones informativas. Visitar las siete cabinas informativas tomara approximadamente 15 a 30 minutos en total. Los representantes de DTPW estarán disponibles para discutir informalmente el proyecto y responder preguntas. **En cada taller se presentará la misma información.**

Si tiene cualquier pregunta o comentario, por favor comuníquese con Charesse Chester, encargada de la Información Pública de este proyecto por el número telefónico (305) 944-7564, o por correo electrónico a: smartsouth@miamidade.gov.

Por favor, elija la fecha y la ubicación que es mejor para usted!

Aviso Público

Departamento de Transporte y Obras Públicas

Proyecto del Corredor Sur de Tránsito Rápido

South Dade Transitway entre la calle 344 del suroeste hasta la estación de Metrorail de Dadeland South

Tallares Públicos de Alternativas

El Departamento de Transporte y Obras Públicas (DTPW por sus siglas en inglés) del Condado de Miami-Dade está auspiciando tres talleres para el Proyecto de Vías de Tránsito Rápido en South Dade (South Corridor Rapid Transit Project). El corredor sur (South Corridor) es uno de los corredores viales del Plan Estratégico de Tránsito Rápido del Área de Miami (también llamado SMART Plan, en inglés) que está en proceso de evaluación para determinar y satisfacer las necesidades de viaje y movilidad del condado.

Los talleres interactivos siguen un formato de puertas abiertas para que los participantes puedan llegar a cualquier hora entre las 6:00 p.m. y las 8:00 p.m. a fin de conocer y dar su opinión sobre las alternativas de modo de tránsito y los conceptos de estaciones. En vez de dar una presentación formal, van a haber siete estaciones informativas. Visitar las siete estaciones informativas tomara approximadamente 15 a 30 minutos en total. Habrá representantes del DTPW presentes para explicar informalmente el proyecto y responder preguntas. En cada taller se presentará la misma información.

West Perrine Senio Center 17801 Homestead Ave	14,389	14	0.10%	1	9
TOTAL	**175,946**	**310**	**0.18%**	**42**	**648**

Overview:

We served 175,946 impressions to users who were using their mobile phones within the designated geo-fence areas, with the ads receiving 310 clicks. The campaign's overall CTR is 0.18%, surpassing the current average standard for digital banners, currently at 0.14%

Click Conversions refer to the amount of users who clicked on the that while seeing it on a Geo-Fence, and visited one of the designated conversion zones. View Conversions are the amount of users that viewed the ad, did not click, but visited the conversion zones as well.

Overall, the geo-fencing conversions triggered almost 650 users who were served your ads, and visited a conversion zone after viewing the ad.

Bus Rapid Transit (BRT)

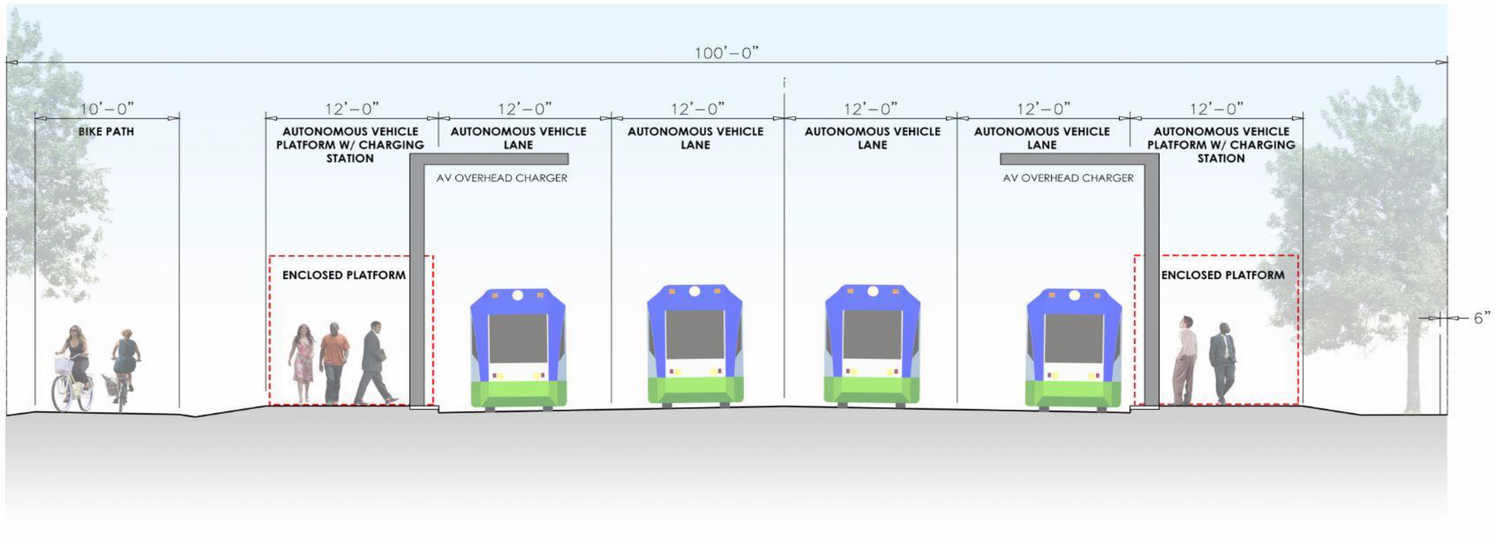

Center Platform Height: 12 inches
Center Platform Width: 15 feet
Center Platform Length: 120 to 150 feet
Configuration: Center platform with bypass lanes, convertible for rail or other future technologies
Special needs: Storage and Light Maintenance Facility

Connected and Autonomous Vehicles (CAV)

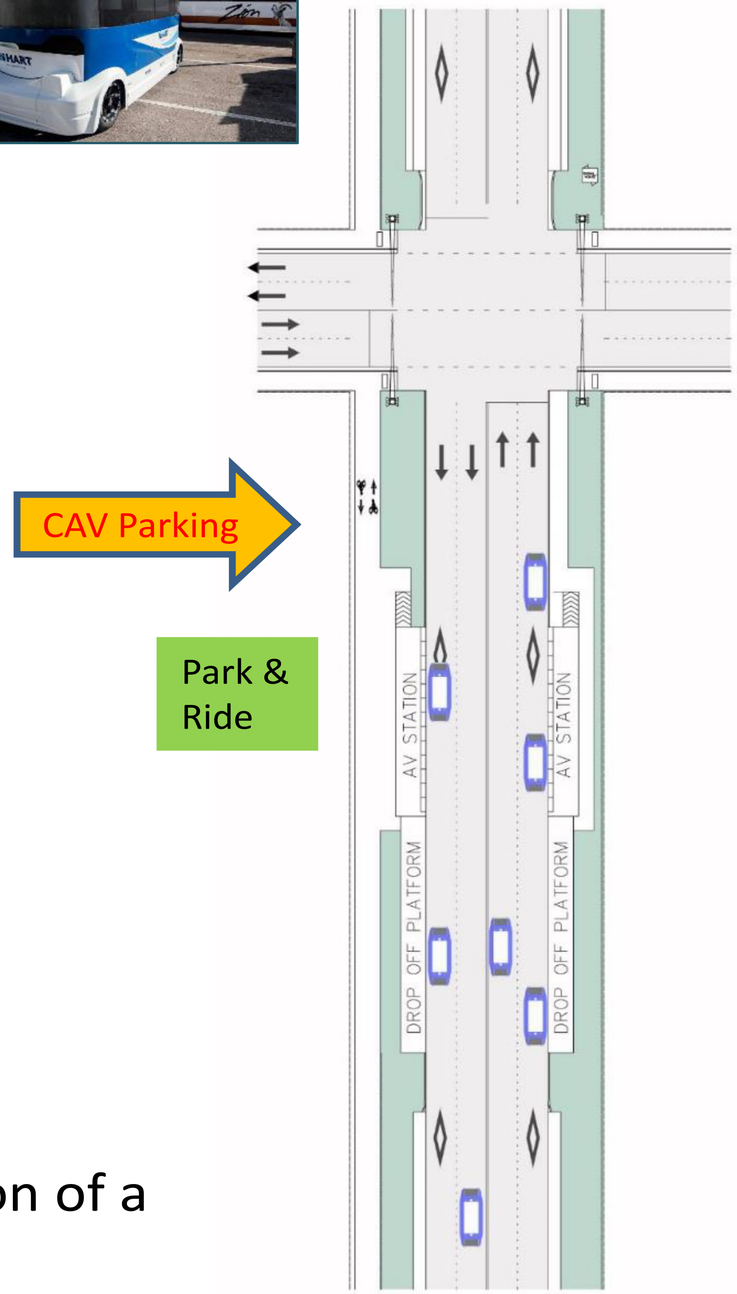

Platforms: Retain existing transit stations/layout

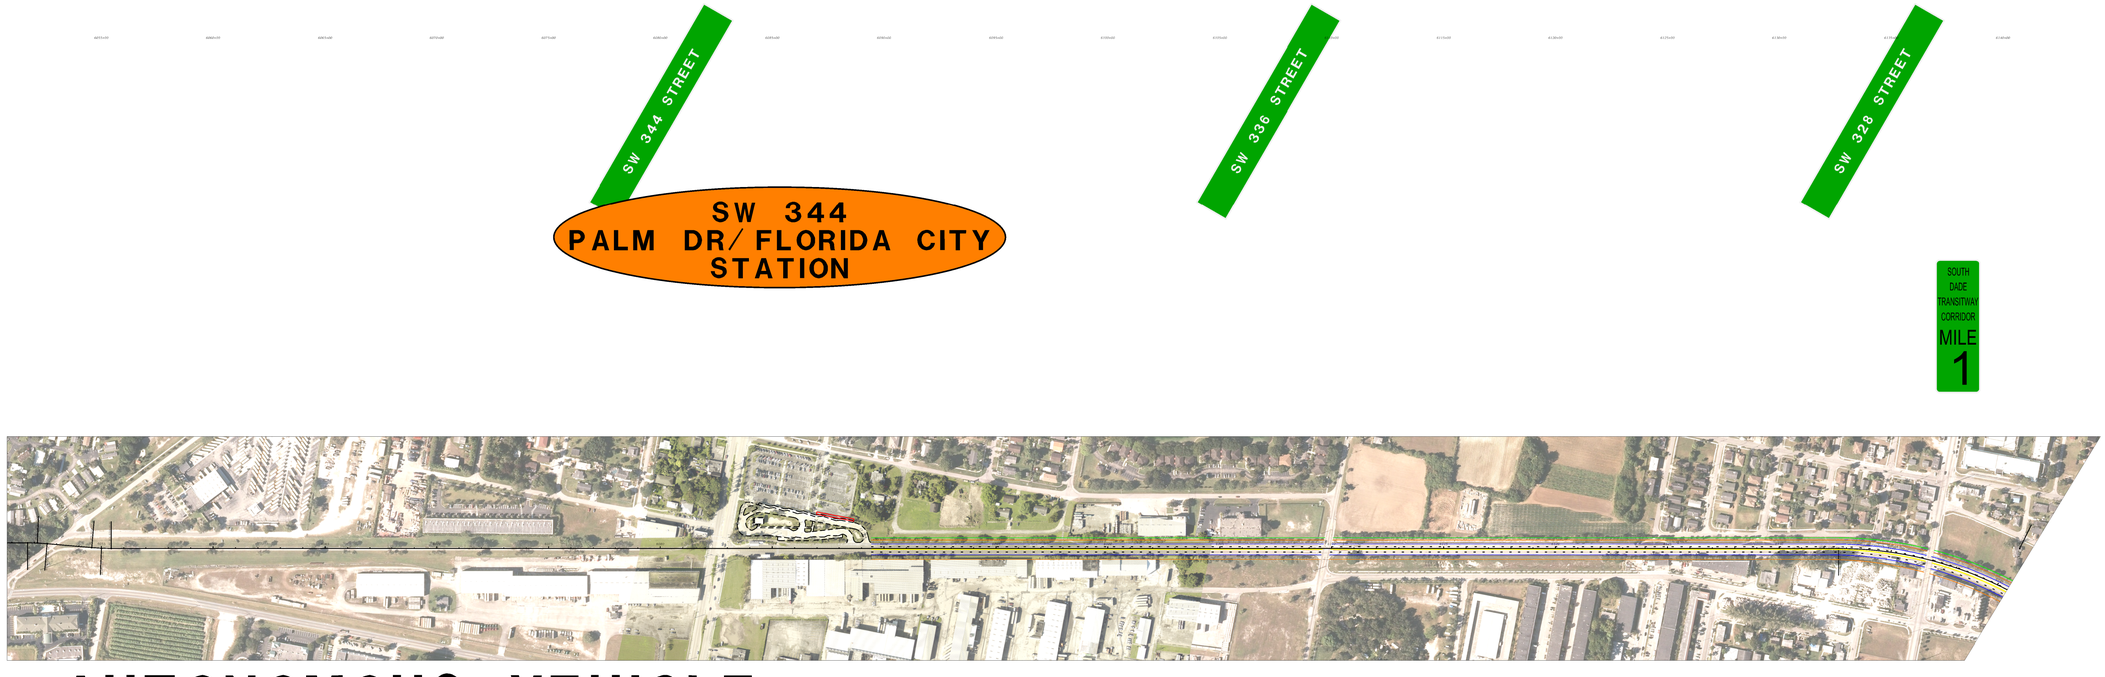

Travel Lanes: Expand to four continuous lanes

CAV facilities: Designate pick up/drop off areas in park-and-ride lots

Storage: Provide 5 to 10 stalls for CAV parking/recharging

Note: This technology is still being developed pending completion of a County-wide CAV Vision Study.

Do you have any preferences/ comments/ suggestions on our Station Designs?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal ✓

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido_____ Metrorail Extension/ Extensión de Metrorail_____ Connected/ Autonomous/ Conectado / Autónomo _____

Honeycomb has station was nice
Too for Buses similar to the one
Lenon at 200 st for now with metal
roofs. Need Circulator bus for the perimeter
/colonial area

Do you have any preferences/ comments/ suggestions on our Station Designs? Yes,
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal _____

Any expension to the existing system is needed. Suggest building something that can be expanded as ridership and resources become available. Doing nothing is not an alternative unless total roadway gridlock is desired

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido _____ Metrorail Extension/ Extensión de Metrorail ✓ Connected/ Autonomous/ Conectado / Autónomo _____

Ultimately a robust metro rail to all corridors is desired. But, begin with Autobuses that are easy to understand. Public encouragement to use the expansion will increase use, & revenue.

All good

All Parking Lots Need Sufficient Permanent Lighting

Riders should feel Welcome

Other Comments/ Otros comentarios: Should Reflect well on the County

All station need Parking, No parking are customers

Busway should be a park - with seating

Canvas stations Away in need of Repair - Eyesores

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal _____

I like the platform design but please make sure the glass is impact and low-e. It will be really hot under there and tinted. I try to avoid the sun

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido ✓ Metrorail Extension/ Extensión de Metrorail_____ Connected/ Autonomous/ Conectado / Autónomo _____

The most cost effective and the one that will take the shortest amount of time to implement is the BRT. I prefer the metrorail extension but citizens cannot live through 8-10 years of construction. Our highways are always under construction and it's painful.

Do you have any preferences/ comments/ suggestions on our Station Designs?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal ✓

Once the Honeycomb Vault Design takes the weather into consideration, it is desirable primarily because it is far more effective. Stations should have provisions for restaurants, cafe's, snack shops, fruit stands etc. Convenient stores as well.

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido _____ Metrorail Extension/ Extensión de Metrorail ✓ Connected/ Autonomous/ Conectado / Autónomo ✓

the auto will is my preference not much more a longer wait than 4 persons per trip. If the Rapid Bus Transit is well maintained and adequate, number of buses are available, it seems favorable.

Other Comments/ Otros comentarios:

We should have some provision that citizen's decision/input are considered and that political expediency does not dictate actions. I really want to know if these work-shop decisions matter as citizens or interested citizens to observe what is being done. High time to bring bus under the 21st century

Do you have any preferences/ comments/ suggestions on our Station Designs? / ¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación? Hard to visualize the difference still, because there was no scale to show # of passengers

Enclosed Center Platform Design/ Diseño de plataforma central ____
Honeycomb Vault Design/Diseño de bóveda de panal ____

Covering are still lacking for the most part with the exception of the dome version.

Do you have any preferences/ comments/ suggestions on the alternatives? / ¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación? BRT #1 choice

Bus Rapid Transit/ Autobuses de tránsito rápido____ Metrorail Extension/ Extensión de Metrorail✓ Connected/ Autonomous/ Conectado / Autónomo ____

BRT is pushing the issue down the road. Safety is a concern as well because stops along the corridor are not supplied with security. People are selective of park and rides as a result. BRT + City don't have representation & takers getting those alternatives.

Other Comments/ Otros comentarios:

really cool? work with transit Alliance Miami, more as they are connected to many solutions

Do you have any preferences/ comments/ suggestions on our Station Designs?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central ✓
Honeycomb Vault Design/Diseño de bóveda de panal _____

The enclosed rail at bus stops are my single greatest issue with M-D Transit. Miami's stance place is not paradise for commuters! A/C, please!

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido ✓ Metrorail Extension/ Extensión de Metrorail _____ Connected/ Autonomous/ Conectado / Autónomo _____

BRT is the obvious solution apart from Metrorail. Fast deployment, flexibility, & near-optimal commuter experience - plus low build & maintenance costs. CAV will come naturally to elevated roads, faster than expected.

- ☐ **Tuesday, May 22, 2018** martes 22 de mayo del 2018 6:00 p.m. – 8:00 p.m. Palmetto Golf Course, Community Room 9300 SW 152nd Street Miami, FL 33157
- ☒ **Wednesday, May 23, 2018** jueves 24 de mayo del 2018 6:00 p.m. - 8:00 p.m. City of Florida City, Council Chambers 404 W Palm Drive Florida City, FL 33034
- ☐ **Thursday, May 24, 2018** miércoles 23 de mayo del 2018 6:00 p.m. - 8:00 p.m. Southland Mall Fountain Area 20505 S Dixie Highway Cutler Bay, FL 33189

Do you have any preferences/ comments/ suggestions on our Station Designs?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central ____
Honeycomb Vault Design/Diseño de bóveda de panal ✓

LOOKS GREAT
ALLOWS FOR MORE AIRFLOW
REGARDLESS OF NUMBER OF PEOPLE - NOT CRAMMED TOGETHER

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido ____ Metrorail Extension/ Extensión de Metrorail ✓ Connected/ Autonomous/ Conectado / Autónomo ____

ELIMINATES THE NEED TO CHECK MULTIPLE TIME SCHEDULES TO TRANSFER (BUS & TRAIN), IF YOU MISS ONE, YOU WILL BE LATE -
CAN REDESIGNATE BUSES FOR LOCAL SHUTTLES TO THE RAIL.

Other Comments/ Otros comentarios:

ONE RAIL SYSTEM ELIMINATES TRANSFER FEE.
ALSO, ~~MUCH~~ MUCH EASIER FOR HANDICAPPED.

Enclosed Center Platform Design/ Diseño de plataforma central ✓
Honeycomb Vault Design/Diseño de bóveda de panal _____

I prefer the enclosed center platform design.
It looks more streamlined

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido ✓ Metrorail Extension/ Extensión de Metrorail _____ Connected/ Autonomous/ Conectado / Autónomo _____

If MDT can implement the Bus Rapid Transit System in the South Corridor, I believe the ridership would be pleased. It is something that can be done much more quickly and more cost-effectively than extending Metrorail. I really would like to see this idea come to fruition as soon as possible. I've been commuting on MDT since 1986 and my frustration with the existing system is at an all-time high.

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal _____

I like either idea. Its much better than our current status with our bus stations

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido_____ Metrorail Extension/ Extensión de Metrorail_____ Connected/ Autonomous/ Conectado / Autónomo _____

I would like the rail south - however the time without the transit way use would be very bad. I we downtown from homestead and it would be very bad so at this time I would not mind the BRT to improve our current status by ~~25~~ 10M. It's an emergency. At this time, our population has tripled, and traffic Thank you! is bad!

Do you have any preferences/ comments/ suggestions on our Station Designs?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal _____

The station designs are quite attractive & appear to be very accomodating. My only concern is about having to cross the (bus/train) pathway in order to get to the station.

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido _____ Metrorail Extension/ Extensión de Metrorail _____ Connected/ Autonomous/ Conectado / Autónomo _____

I would prefer Metrorail extension. However I realize bus rapid transit is a more realistic choice both from a matter of cost and time to have it up + running.

Do you have any preferences/ comments/ suggestions on our Station Designs? yes
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Enclosed Center Platform Design/ Diseño de plataforma central _____
Honeycomb Vault Design/Diseño de bóveda de panal ✓

The honeycomb is dramatic & less safety issue from rain at night. The enclosed design has more chance of trash & damage & enclosed area. What if AC system goes out. Then we're stuck without fans. Honeycomb needs more closure (rain blows sideways in rainy season)

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido _____ Metrorail Extension/ Extensión de Metrorail _____ Connected/ Autonomous/ Conectado / Autónomo _____

That an alternative that can be implemented ASAP the BRT makes more sense. Cost + building schedule

Other Comments/ Otros comentarios:

I'm glad this issue is on the table. We need better mass public transportation, not only in Miami-Dade "most livable" The South area is growing & is time to

Very Nice Presentation. I am undecided between the Metrorail & Busway. I want the most Reliable & Functional Alternative.

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido ✓ Metrorail Extension/ Extensión de Metrorail ✓ Connected/ Autonomous/ Conectado / Autónomo _____

I think the Metro Rail Extension sounds great. But my Problem is that I live in Homestead and work downtown. I am concerned about getting to and from work on time. Because there will only 2 tracks, so there may be several delays. Once We Lose, later going downtown could be. Right now the Metro Rail isn't very Reliable because we experience many delays.

Honeycomb Vault Design/Diseño de bóveda de panal _____

Enclosed center platforms are nice but are they safer? Does it increase foot traffic across ROW? Are they well controlled during the AM commute hours? I'm sure all are ADA compliant but is the design better?

Do you have any preferences/ comments/ suggestions on the alternatives?
¿Tiene alguna preferencia / comentario / sugerencia en nuestros diseños de estación?

Bus Rapid Transit/ Autobuses de tránsito rápido _____ Metrorail Extension/ Extensión de Metrorail _____ Connected/ Autonomous/ Conectado / Autónomo _____

Dependence from BRT to Metrorail must be seamless. What happens when you plan for people keep coming via BRT & they options to take BRT downtown? Are Feed these changes are really competent and can reduce demand for cross Miami-Dade distances? Connection spread bigger with the last mile & the role to of planning & these devices.

Other Comments/ Otros comentarios:

My preference is a single-seat ride; however, not at the expense of at-grade travel.
Are electrified rails I worry about lengthy after hurricanes and other disruptive events?

PROJECT ADVISORY GROUP MEETING #1

OCTOBER 2ND , 2017

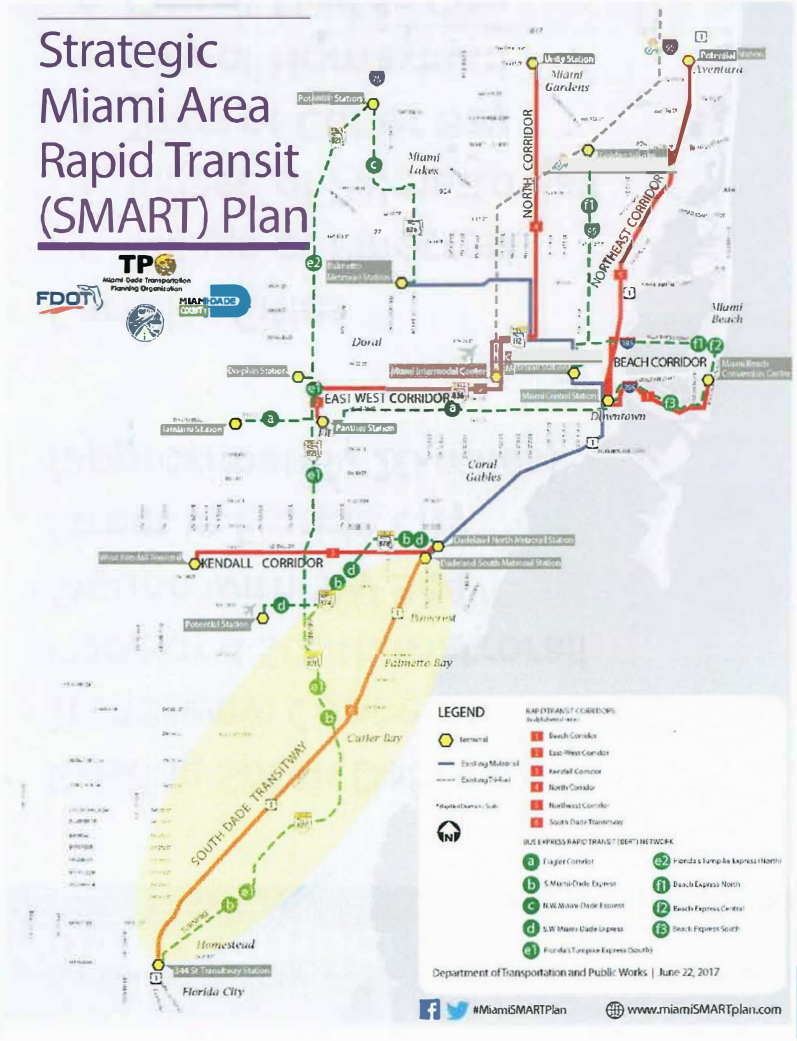

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Meeting Overview

- Miami-Dade County SMART Plan
- South Corridor
  - PD&E (DTPW)
  - Land Use (TPO)
- Project History and Timeline
- Study Elements
- Project Scope and Purpose
- Study Objectives: Evaluate Transit Alternatives
- Public Engagement
- Selecting the Locally Preferred Alternative
- Project Schedule

#MiamiSMARTPlan www.miamismartplan.com MIAMI-DADE COUNTY

Miami-Dade County SMART Plan

Six Corridors:

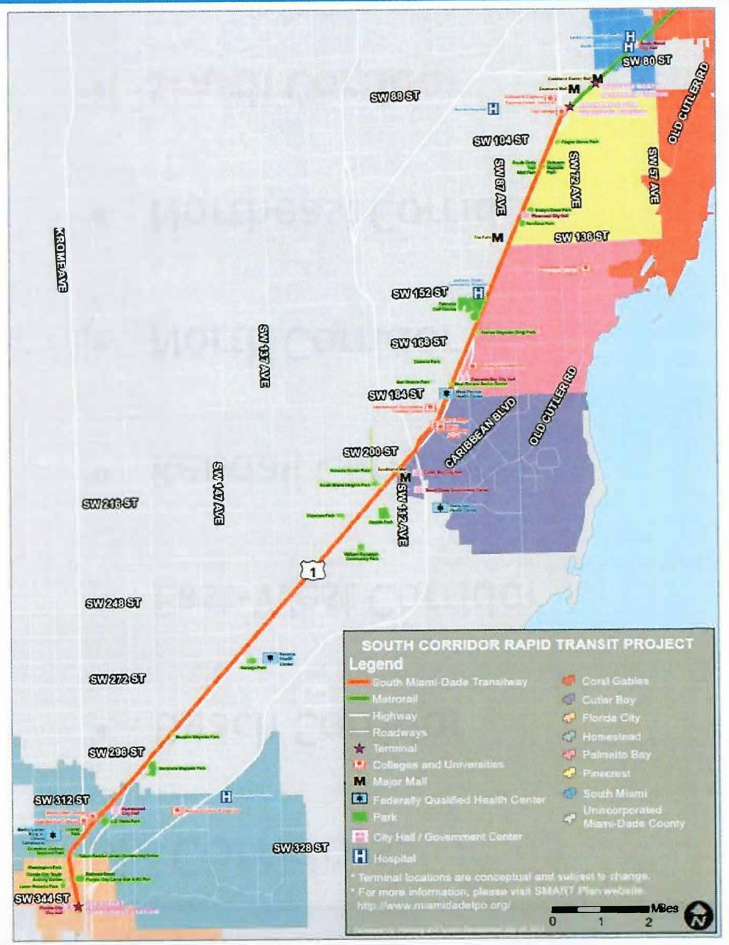

- Beach Corridor
- East-West Corridor
- Kendall Corridor
- North Corridor
- Northeast Corridor
- **South Corridor**

MIAMI-DADE COUNTY

South Corridor - Description

- Existing South Dade Transitway: Connects Dadeland South Metrorail Station with SW 344th Street in Florida City (approximately 20 miles)

- Corridor Cities
  - Village of Pinecrest
  - Village of Palmetto Bay
  - Town of Cutler Bay
  - City of Homestead
  - City of Florida City

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

2013
US 1 Express Lanes PD&E Study

2017
South Corridor Rapid Transit Project commences

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

Study Elements

Public Involvement

Continuous outreach and coordination with community and stakeholders

Data Collection

Review of existing conditions

Engineering Analysis

Develop and evaluate alternatives that meet the goals of the project

Environmental Evaluations

Identify potential impacts to social, natural, and physical environments

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

Project Scope and Purpose

Project Scope

- Document Existing Conditions
- Develop Transit Mode Alternatives using Existing Transitway Alignment
- Station Locations and Transit Terminals
- Multimodal Connections

Project Purpose

- Improve Mobility
- Promote Connectivity
- Enhance Accessibility
- Stimulate Economic Development

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

Study Objectives: Evaluate Transit Alternatives

- At-Grade Metrorail Extension
- At-Grade Rapid Transit Service (RTS) using the existing Transitway
- At-Grade Light Rail Transit
- Connected and Autonomous Vehicle (CAV) alternative

All alternatives will consider grade separations at major intersections

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

Public Engagement

- Elected Officials and Agency Kick-Off Meeting
- Public Kick-Off Meeting
  - Outreach
    - Property Owner Notices
    - Advertisements (Miami Herald and El Nuevo Herald)
    - Meeting Notice Distribution
      - Metrorail Station
      - Park-and-Ride Lots
      - Public Facilities (18 locations)
- DTPW Social Media and Municipal Networks
- Unscheduled Meetings
- Fact Sheets (English and Spanish)
- Corridor Workshops - Fall 2017
- Project Website: www.miamismartplan.com

#MiamiSMARTPlan

#MiamiSMARTPlan www.miamismartplan.com

MIAMI-DADE COUNTY

Selecting the Locally Preferred Alternative (LPA)

Purpose and Need

- Identify the need for transit investment
- Determine project goals and objectives
- Define evaluation criteria

Tier 1 Definition and Evaluation: Qualitative

- Identify the universe of alternatives
- Qualitative evaluation to determine feasibility

Tier 2 Definition and Evaluation: Quantitative

- Define the remaining alternatives in detail:
  - Develop operating plan
  - Generate ridership forecast
  - Estimate capital and O&M costs
- Evaluate the alternatives in detail

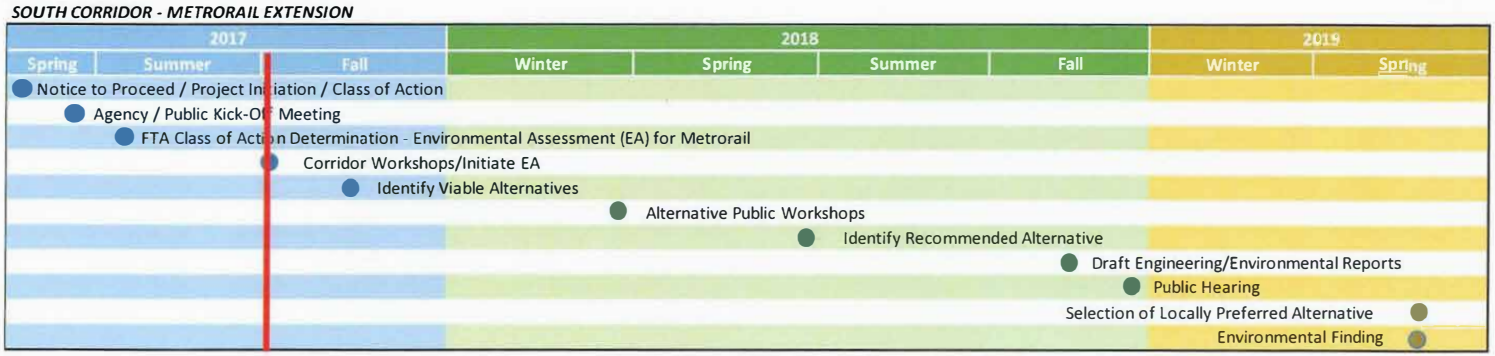

Selection of Locally Preferred Alternative (LPA)

PROJECT ADVISORY GROUP MEETING #2

January 30, 2018

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Agenda

I. Welcome & Introductions

II. PAG Roles and Responsibilities

III. Workshop Results

IV. Project Purpose and Need

V. Preliminary Traffic Analysis

VI. Preliminary Travel Time Analysis

VIII. Preliminary Benefits Cost Analysis

IX. Next Steps

X. Meeting Summary and Wrap-up

Roles and Responsibilities

PAG Purpose

- Provide a broad set of perspectives on the project;
- Make recommendations that assist DTPW in building project consensus and community awareness;
- Identify potential community issues
- Attend four (4) PAG meetings to address specific study topics and offer input on public meeting content;
- Review and offer input on the final recommendations.

PAG Membership (up to 20 representatives)

- Municipalities
- Business owners and/or property managers
- Business association and/or organizations
- Community associations and/or organizations
- Property owners/homeowner associations
- Educational facilities
- Economic development organizations

Roles and Responsibilities cont.

PAG Rules of Decorum

- Follow the meeting agenda
- Maintain balanced input to allow opportunities for all to participate; Identify potential community issues
- Listen carefully and ask questions to allow for informed input and educated decisions;
- Express individual opinions and be respectful of other PAG members and the project team
- Maintain focus on goals/objectives of the group and the South Corridor Rapid Transit Project
- Review and comment on work products in a timely manner;
- Include the DTPW and consultant Project Managers on emails and any other means of correspondence between PAG members.

Corridor Workshop Results

End of Station Questions

1. Land Use Question
   - Overall Results
     - 31 – 29 % in favor of 3 – 4 stories and 6 – 8 stories
2. Alternative Mode Question
   - Overall Results
     - 40 % in favor of Rapid Transit Service (RTS)
     - 53 % in favor of some form of rail transit (HRT & LRT)

Project Purpose and Need

Initial Project Goals	Initial Project Objectives
Maximize Mobility to Improve Corridor Carrying Capacity and Regional Service Enhancements	• Enhance regional mobility choices by offering alternate transportation option with competitive travel times • Enhance transit service and better connections with existing regional transit system • Provide better transit access to major activity centers, including but not limited to transit centers, educational facilities, hospitals, major malls, recreational attractions, and major employment centers • Provide safe, multi-modal access to the transit system • Reduce the growth in automobile trips
Enhance connectivity with local and other regional transit systems that improves transportation efficiency	• Maximize the use of existing transportation corridors and infrastructure • Provide a transportation improvement that is cost efficient • Increase regional transit trips • Develop transit infrastructure improvements that will facilitate transit usage • Ability to implement enhanced transit stations • Support multi-modal connectivity
Realize economic opportunities within the project corridor through Transit-Oriented Development	• Promote Transit-Oriented Development • Maximize economic benefits • Increase amount of affordable housing in the corridor
Contribute to regional equity, sustainability and quality of life	• Preserve and enhance the built environment • Preserve and enhance the natural environment
Develop and select an implementable and community-supported project	• Work within funding constraints to meet community objectives and maximize transit benefits in the corridor

Preliminary Traffic Analysis

Initial Traffic Analysis

- 136th Street and the Transitway/US 1
- 152nd Street and the Transitway/US 1

Methodology

- SYNCHRO capacity analysis
- Headway – one transit vehicle every 3 minutes

Findings:

- **75% of corridor traffic is along US1**
- **Introduction of Transit Preemption will increase delay by 5-10 seconds per vehicle at each intersection**
- **Full VISSIM analysis is needed to verify findings at all locations**

Preliminary Travel Time Analysis

Length of Corridor

- 20 Miles from Dadeland South to SW 344th Street

Existing Transit Travel times

- 60 - 65 minutes

Future Target Travel

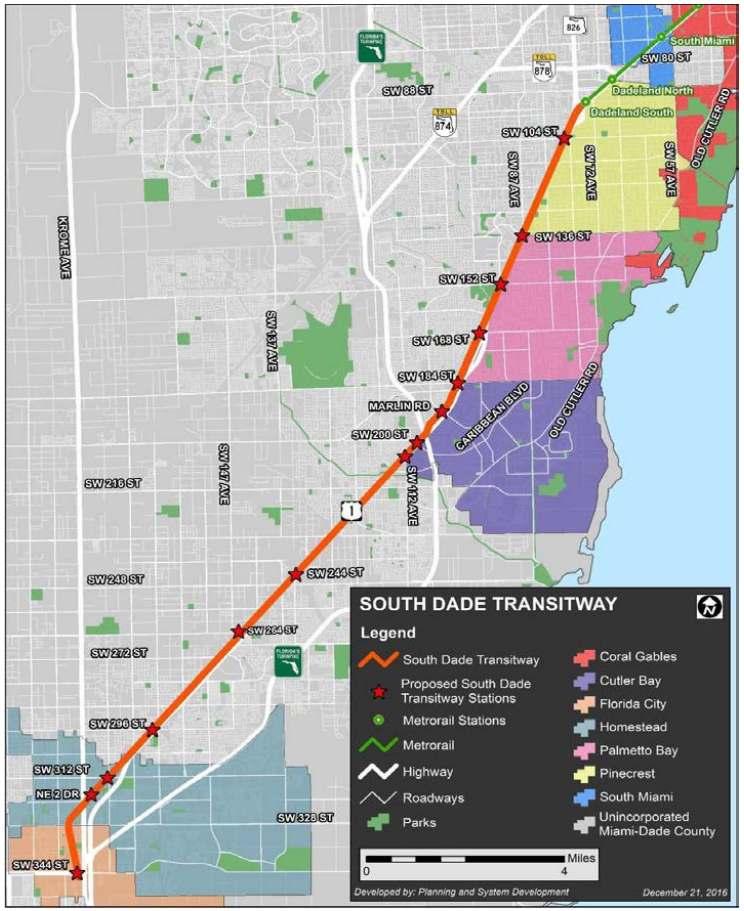

- Approximately 40 - 45 minutes with a 60 minute target to Downtown Miami
- Approximately 60 - 65 minutes from SW 344th St to Downtown Miami

Transitway Operations

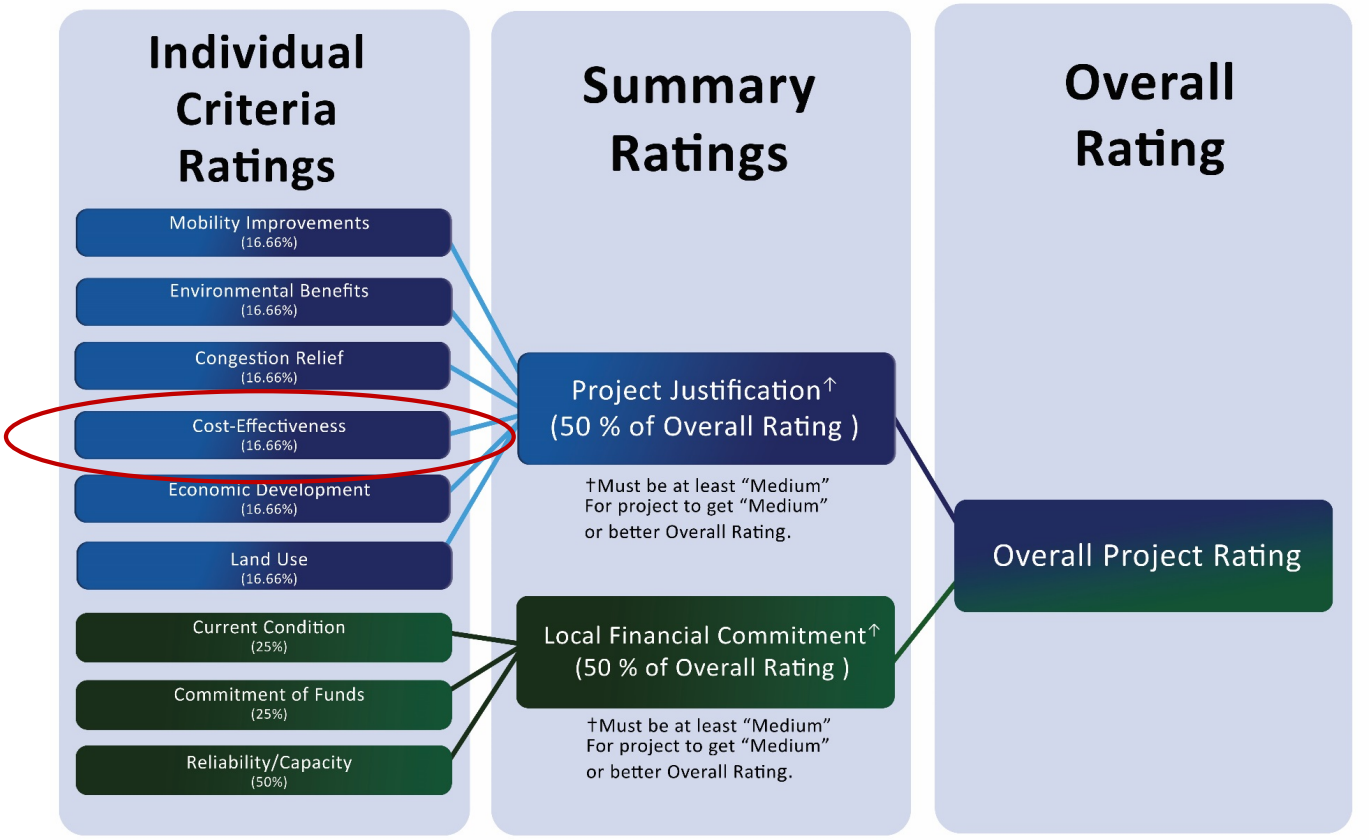

- Local service will be maintained for RTS alternative (31 stations)
- 14 stations identified for Rail and RTS
    - Operations
        - Metrorail/Heavy Rail Transit and RTS: 3 minute peak/5 minute off-peak headway (SW 344th St to Dadeland South)
        - Metrorail/Heavy Rail Transit: 9 minute headway (one-seat ride) to Downtown
        - Zonal Express service considered (South, Central, North)

Potential Station Locations

- Dadeland South (existing Metrorail Station)
- SW 104th St.
- *SW 112th St. - optional station*
- SW 136th St. (Howard Dr. / The Falls Mall)
- SW152nd St. (Richmond Dr.)
- SW 168th St.
- *West Perrine/Franjo Triangle - optional station*
- SW 184th St. (Eureka Dr.)
- Marlin Road
- SW 200th St. (Caribbean Blvd.)
- SW 112th Ave. (Target)
- *SW 224th St. / Miami Ave. - optional station*
- SW 244th St.
- *SW 260th St. - optional station*
- SW 264 St. (Bauer Dr.)
- SW 296th St.
- *NE 15th St. - optional station*
- SW 312th St.
- NE 2nd St. (Homestead City Hall)
- SW 344th St.

Preliminary Benefit Cost Analysis

Preliminary Benefit Cost Analysis cont.

- ***Cost Effectiveness (criteria for this is a maximum of $9.99 per rider to achieve a medium rating)***

RIDERSHIP (per day)	CAPITAL COST RANGE (millions)				
	$250	$500	$1,000	$2,000	$3,000
16,000	$5.90	$20.14	$23.61	$29.51	$36.46
24,000	$3.94	$13.43	$15.05	$19.68	$24.31
32,000	$2.95	$10.07	$11.28	$14.76	$18.23
35,000	$2.70	$9.21	$10.32	$13.49	$16.67
40,000	$2.36	$8.06	$9.03	$11.81	$14.58
50,000	$1.89	$6.44	$7.22	$9.44	$11.67
58,500	$1.61	$5.51	$6.17	$8.07	$9.97
75,000	$1.26	$4.30	$4.81	$6.30	$7.78
100,000	$0.94	$3.22	$3.61	$4.72	$5.83

COST EFFECTIVE	RATINGS LEGEND		THRESHOLD	
√ - Yes	**High**		**<**	**$ 4.00**
√ - Yes	**Medium High**		**$ 4.00**	**$ 5.99**
√ - Yes	**Medium**		**$ 6.00**	**$ 9.99**
X - No	Medium Low		$ 10.00	$ 14.99
X - No	Low		>	$ 15.00

- Costs are based on Capital plus O&M prorated over 30 years
- Ridership assumes an annualization factor of 300
- Operations and Maintenance (O&M) BRT/RTS assumes $20 million per year/Rail $80 million per year
- Existing 23 mile rail system today costs ~$97 million/year per 2017 TDD (NTD)

- Demonstration of FTA Cost effectiveness analysis

Next Steps

1. **Tier 2 Analysis**
   - **Based on Tier 1 analysis Light Rail Transit will not be carried forward.**

2. **Environmental Assessment or Environmental Impact Statement (if a rail mode is selected to move forward)**

3. **Cost Refinement**

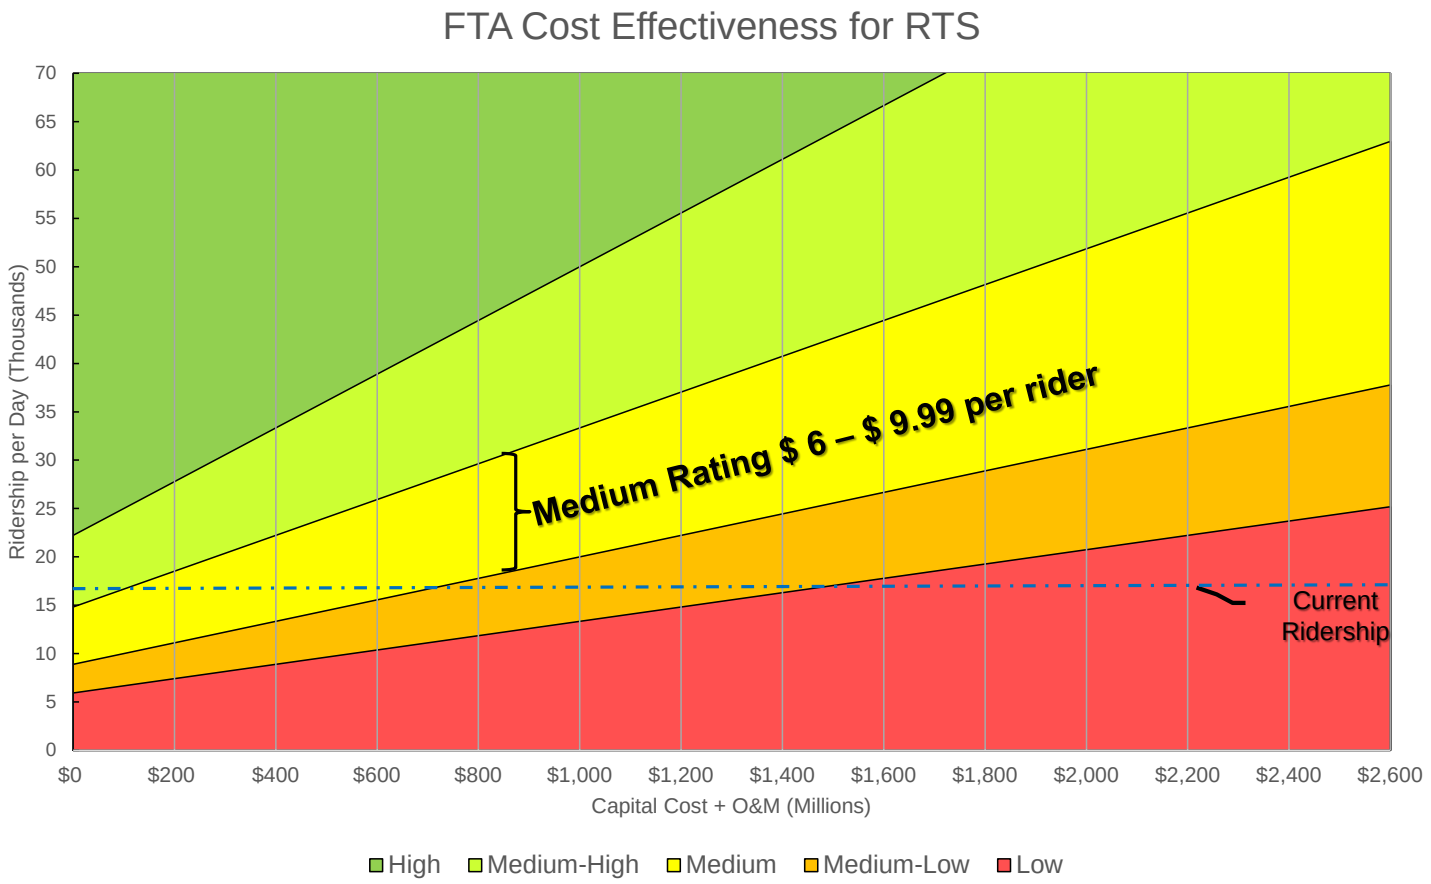

4. **Ridership Estimation**

Meeting Summary and Wrap-up

Department of Transportation and Public Works (DTPW)

PROJECT ADVISORY GROUP MEETING #3

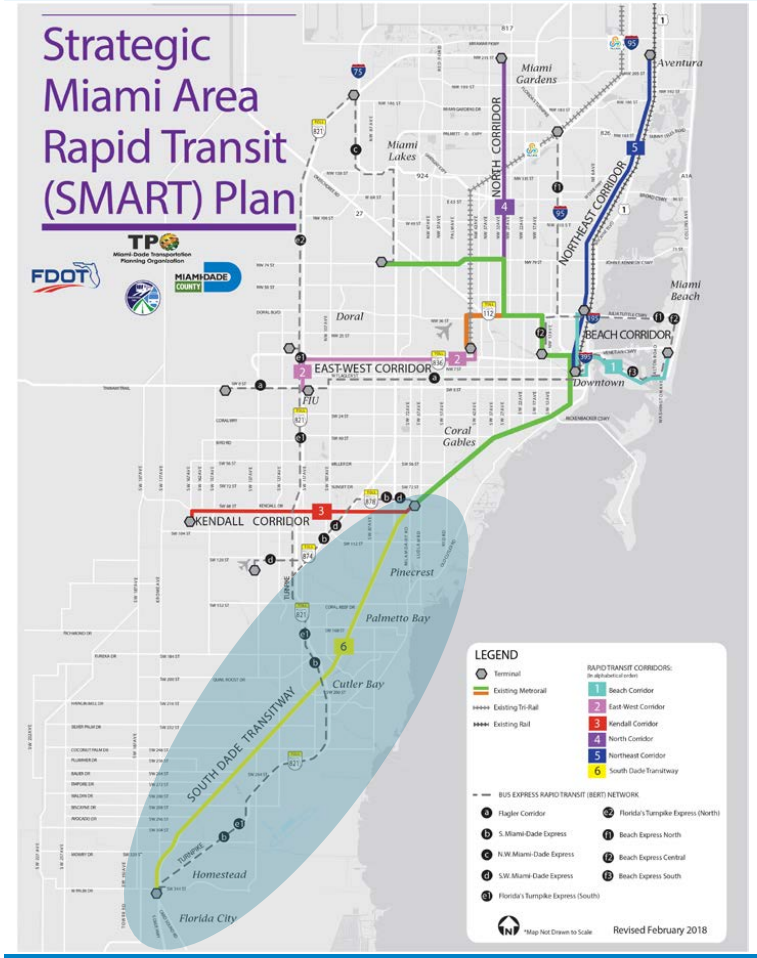

May 14, 2018

SOUTH CORRIDOR | www.miamismartplan.com | #MiamiSMARTPlan

Meeting Overview

- Miami-Dade County SMART Plan
- South Corridor Description
- Project History and Timeline
- Study Objectives: Evaluate Transit Alternatives
- Public Engagement
- Selecting the Locally Preferred Alternative (LPA)
- Project Schedule
- Station Locations
- Updated Transit Modes Comparison (Tier II)
- Current Federal Small Starts Opportunity
- Proposed Operation Plans
- Preliminary Station Renderings
- Preliminary Alternative Evaluation Matrix (Tier II)
- Next Steps
- Questions

Miami-Dade County SMART Plan

Six Corridors:

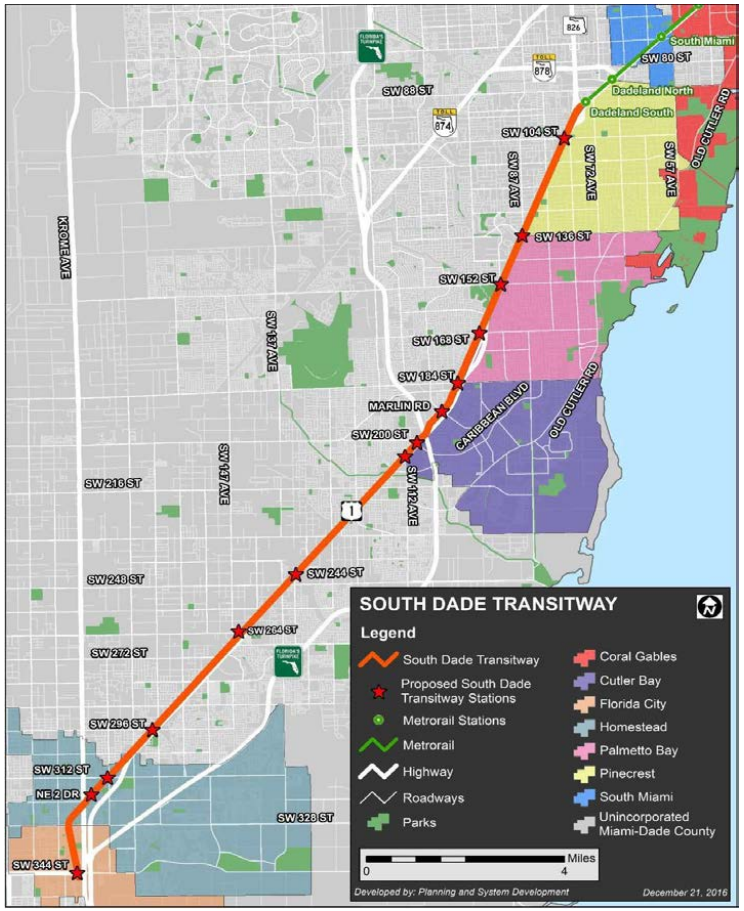

- Beach Corridor
- East-West Corridor
- Kendall Corridor
- North Corridor
- Northeast Corridor
- **South Corridor**

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

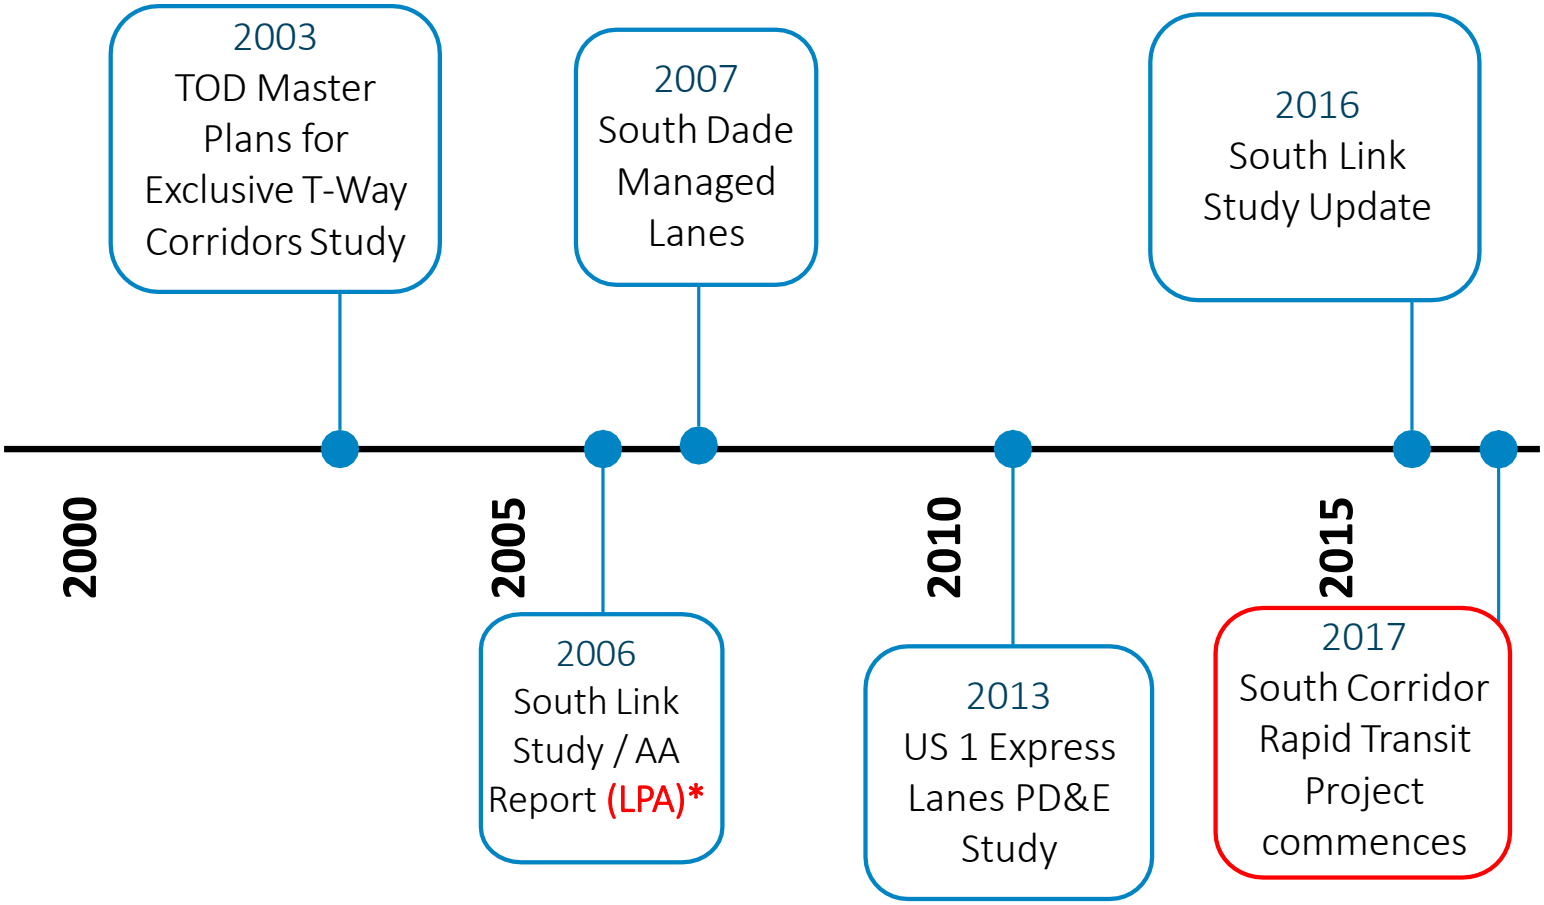

South Corridor Description

- Existing South Dade Transitway: Connects Dadeland South Metrorail Station with SW 344th Street in Florida City (approximately 20 miles)

- Corridor Cities
  - Village of Pinecrest
  - Village of Palmetto Bay
  - Town of Cutler Bay
  - City of Homestead
  - City of Florida City

Project History and Timeline

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Study Objectives: Evaluate Transit Alternatives

- At-Grade Metrorail Extension
- At-Grade Rapid Transit Service (RTS)
- At-Grade Light Rail Transit
- Connected and Autonomous Vehicle (CAV) alternative

All alternatives will consider grade separations at major intersections

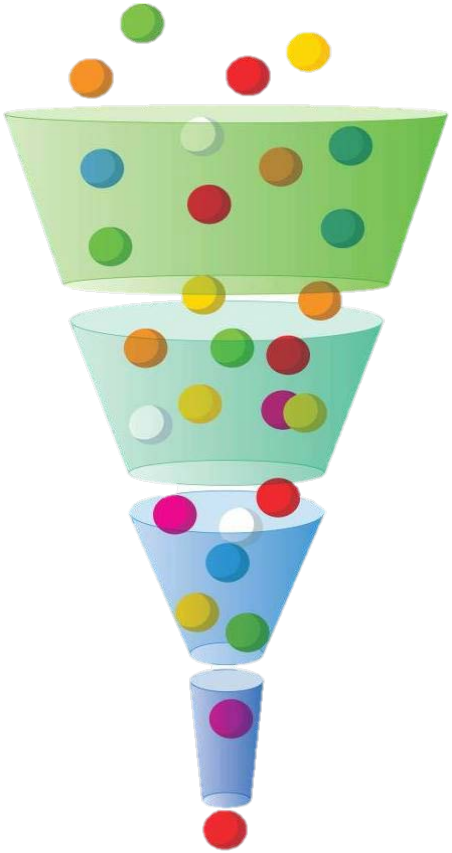

Public Engagement

- Agency Kick-Off Meeting held on May 5th, 2017
- Public Kick-Off Meeting held on May 31st, 2017
- Corridor Workshops
  - #1 The Falls Mall (10-23-17),
  - #2 Southland Mall (10-25-17)
  - #3 Miami-Dade College – Homestead Campus (12-12-17)
- Meetings with stakeholders
- Project Advisory Group (PAG) – 2 meetings
  - #1 South Dade Regional Library (10-02-17)
  - #2 Naranja Branch Library (01-30-18)
- One-on-One Meetings
  - Florida City Mayor-Manager / Homestead City Manager (05-07-18)
  - County Commissioner Levine Cava (05-08-18)
  - Pinecrest Village Manager / Palmetto Bay Village Manager (05-09-18)
  - County Commissioner Moss (05-10-18)
  - Cutler Bay Town Manager (05-11-18)
- Project website and social media listed below

SOUTH CORRIDOR www.miamismartplan.com #MiamiSMARTPlan

Selecting the Locally Preferred Alternative (LPA)

Purpose and Need

- Identify the need for transit investment
- Determine project goals and objectives
- Define evaluation criteria

Tier 1 Definition and Evaluation: Qualitative

- Identify the universe of alternatives
- Qualitative evaluation to determine feasibility

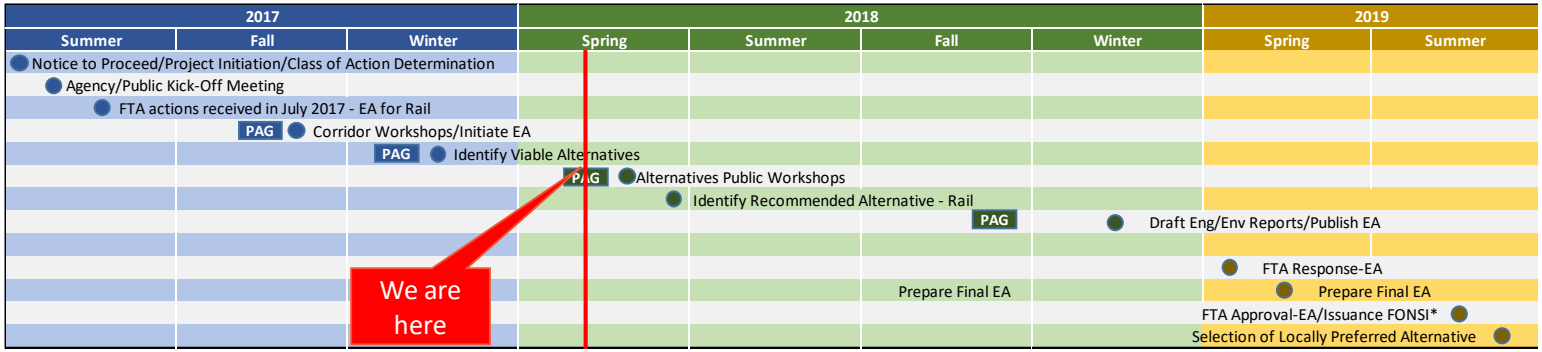

Tier 2 Definition and Evaluation: Quantitative

- Define the remaining alternatives in detail:
  - Develop operating plan
  - Generate ridership forecast
  - Estimate capital and O&M costs
- Evaluate the alternatives in detail

Selection of Locally Preferred Alternative (LPA)

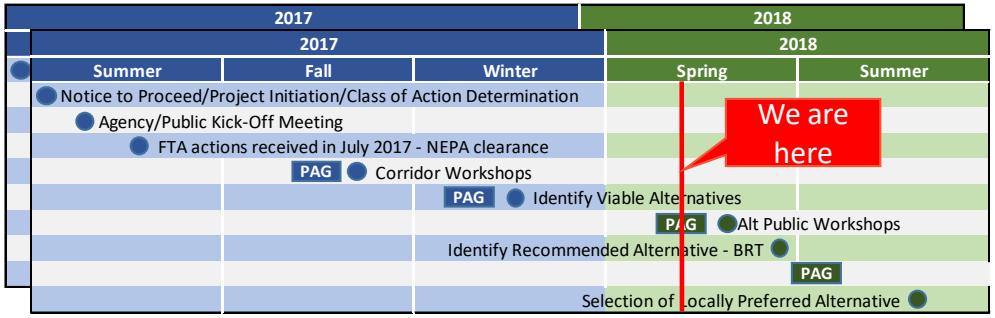

Project Schedule

Typical schedule (Rail[1])

[1]DTPW has received EA Class of Action determination for Rail

Typical Schedule (BRT[2])

[2]DTPW has received NEPA clearance from FTA for BRT

Basic Facts

Length of Corridor

- 20 Miles

Population

- 89,040 (1/2-mile radius)
- 326,000 (2-mile radius)
  - Source: American Community Survey 2015

Employment

- 55,229 (1/2-mile radius)
- 87,000 (2-mile radius)
  - Source: LEHD Origin-Destination Employment Statistics 2015

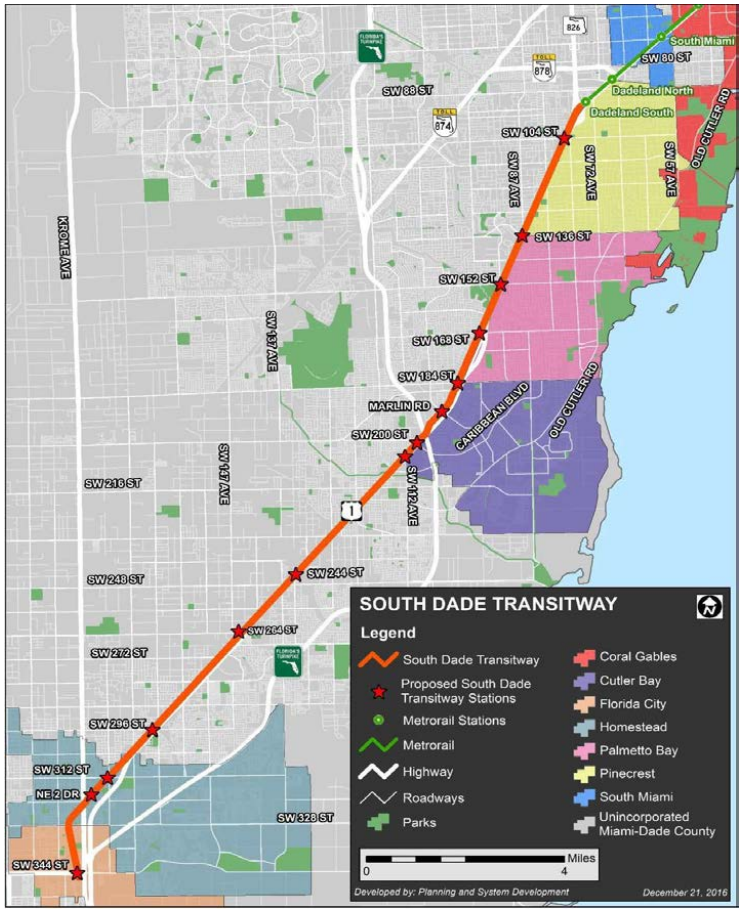

Daily Traffic on US-1 (AADT)

- 95,000 vehicles at SR-826
  - Source: FDOT (2016)

Transitway Usage Today

- About 16,000 riders per day

Source: Miami-Dade DTPW (May, 2016)

Station Locations – Original 14 Stations

- Dadeland South (existing Metrorail Station)
- SW 104th St.
- SW 136th St. (Howard Dr. / The Falls Mall)
- SW152nd St. (Coral Reef Dr.)
- SW 168th St. (Richmond Dr.)
- SW 184th St. (Eureka Dr.)
- Marlin Road
- SW 200th St. (Caribbean Blvd.)
- SW 112th Ave. (Target)
- SW 244th St.
- SW 264 St. (Bauer Dr.)
- SW 296th St.
- SW 312th St.
- NE 2nd St. (Homestead City Hall)
- SW 344th St.

- *SW 112th St. – SW 117th St. Requested by Pinecrest*
- *Hibiscus St. / Franjo Triangle Requested by Palmetto Bay*
- *SW 177th Ave. / Krome Ave. Requested by Homestead*

Transit Modes Comparison

Alternative	1	2	3	4	5
Name	Rapid Transit Service (RTS)	Connected Autonomous Vehicles (CAV)	Light Rail Transit (LRT)	Heavy Rail Transit (HRT / Metrorail) At Grade*	No Build
Project Development Duration (Years)	2 - 3	3 - 4	4 - 6	8 - 10	NA
Service Frequency	5 - 10 Minute Peak / 15 Minute Off-Peak	On Demand	10 Minute Peak / 15 Minute Off-Peak	9 Minute Peak / 12 - 15 Minute Off-Peak	5 - 10 Minute Peak / 15 Minute Off-Peak
Line Length (Miles)	20	20	20	20	20
Speed Range (MPH)	20 - 45	30 - 65	30 - 45	30 - 45	20 - 45
Right-of-Way	Semi-Exclusive	Shared Lanes	Semi-Exclusive	Semi-Exclusive	Semi-Exclusive
Stop Spacing (Miles)	0.5 - 2	On Demand with Express Service	0.5 - 2	0.5 - 2	0.5 - 2
Guideway Infrastructure	Dedicated Lanes	Smart Roadway and Infrastructure	At-Grade with Overhead Power Line	At-Grade with Overhead Power Line	Dedicated Lanes
Other Infrastructure	Stations, Level Boarding, Durable Roadway Paving	High Number of Vehicles, ITS, Boarding Zones	Stations, Power Generation and Maintenance Facility	Stations, Power Supply	Existing
Preliminary Total Capital Cost (Millions)	$ 250 - 275	$ 500 – 600	$ 1,300 – 1,430	$ 1,200 - 1,350	NA
Operating Cost (per Revenue Hour)	$ 100 - 150	Variable	$ 180 - 230	$ 230 - 270	$ 100 - 150
Passenger Capacity (per train)	100 - 300	Variable	250 - 300	450 - 600	60 - 100

* Elevated Heavy Rail Transit (HRT / Metrorail) was not reevaluated due to the cost feasibility of the alternative.

PAG Request

Why did we drop Light Rail Transit ?

- Need to buy land and build a new Vehicle Maintenance Facility
- LRT is not a mode currently in use by Miami Dade County
- Completely new fleet of vehicles required
- Cannot operate on the existing Metrorail system – transfer still required
- Transit Operating and Maintenance staff retraining required

Why not Elevated Metrorail ? (PAG Request)

- Cost would be almost double at-grade rail extension
- Likelihood of achieving a medium project rating from the FTA is low
- County and State would need to finance the entire project without Federal assistance
- Time to implement would likely be 10-15 years based on financing availability

Current Federal Small Starts Opportunity

- Small Starts program is geared toward faster delivery
- Does not overload the annual national funding availability of about $2.2 Billion
- Project Cost under $250 million yields automatic Medium rating in 3 categories
- Opportunity to apply for federal funding in the coming Fiscal Year
- Project delivery/start of operations as early as 2021

Proposed Operation Plan HRT

Ⓟ Existing Park and Ride

ⒻⓅ Future Park and Ride

Locations that provide condition for potential overpass

Locations with potential above-grade station

● RT 52 will be a feeder (will not run on Transitway). It will stop at the SW 152nd St Station located on north side of SW 152 St. Need to accommodate a U-turn after platform.

● Place station on north side of cross-streets to allow future branched (Zonal Express) or trunk and feeder connections.

● RT 252, will be a Zonal Express with limited stops along SW 152nd St and stopping only at the following Transitway Stations: SW 136 St, SW 104 St and Dadeland South.

Stations – Original/Proposed Relocations

- Dadeland South (existing Metrorail Station)
- SW 104th St. → *SW 112th St. – SW 117th St. Requested by Pinecrest*
- SW 136th St. (Howard Dr. / The Falls Mall)
- SW 152nd St. (Coral Reef Dr.)
- SW 168th St. (Richmond Dr.) → *Hibiscus St. / Franjo Triangle Requested by Palmetto Bay*
- SW 184th St. (Eureka Dr.)
- Marlin Road
- SW 200th St. (Caribbean Blvd.)
- SW 112th Ave. (Allapattah Rd. / Target Lot)
- SW 244th St.
- SW 264th St. (Bauer Dr.)
- SW 296th St.
- SW 312th St. (Campbell Dr.)
- NE 2nd St. (Homestead City Hall) → *SW 177th Ave. / Krome Ave. Requested by Homestead*
- SW 344th St. (Palm Dr.)

Updated Transit Modes Comparison

MIAMI-DADE COUNTY

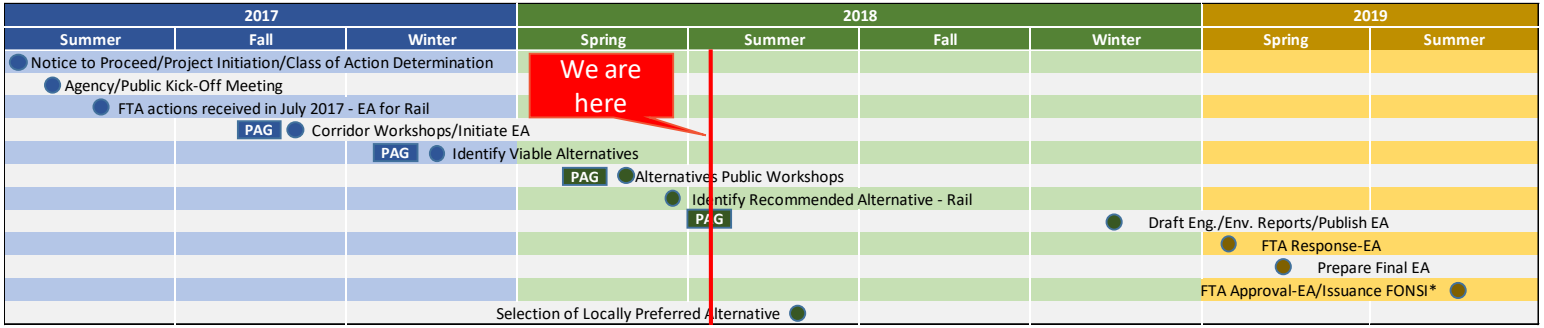

Alternative	1	2	3	4	5
Name	Rapid Transit Service (RTS)	Connected Autonomous Vehicles (CAV)	Light Rail Transit (LRT)	Heavy Rail Transit (HRT / Metrorail) At Grade*	No Build
Project Development Duration (Years)	2 - 3	3 - 4	4 - 6	8 - 10	NA
Service Frequency	5 - 10 Minute Peak / 15 Minute Off-Peak	On Demand	10 Minute Peak / 15 Minute Off-Peak	9 Minute Peak / 12 - 15 Minute Off-Peak	5 - 10 Minute Peak / 15 Minute Off-Peak
Line Length (Miles)	20	20	20	20	20
Speed Range (MPH)	20 - 45	30	30 - 55	30 - 45	20 - 55
Right-of-Way	Semi-Exclusive	Shared Lanes	Semi-Exclusive	Semi-Exclusive	Semi-Exclusive
Stop Spacing (Miles)	0.5 - 2	On Demand with Express Service	0.5 - 2	0.5 - 2	0.5 - 2
Guideway Infrastructure	Dedicated Lanes	Smart Roadway and Infrastructure	At-Grade with Overhead Power Line	At-Grade with Overhead Power Line	Dedicated Lanes
Other Infrastructure	Stations, Level Boarding, Durable Roadway Paving	High Number of Vehicles, ITS, Boarding Zones	Stations, Power Generation and Maintenance Facility	Stations, Power Supply	Existing
Preliminary Total Capital Cost (Millions)	$ 250 - 300	$ 500 – 600	$ 1,200 – 1,430	$ 1,300 - 1,500	NA
Operating Cost (per Revenue Hour)	$ 100 - 150	Variable	$ 180 - 210	$ 230 - 270	$ 100 - 150
Passenger Capacity (per train)	100 - 300	Variable	250 - 300	450 - 600	50 - 100

* Elevated Heavy Rail Transit (HRT / Metrorail) was not reevaluated due to the cost feasibility of the alternative.

SMARTSouth@miamidade.gov www.miamismartplan.com #MiamiSMARTPlan

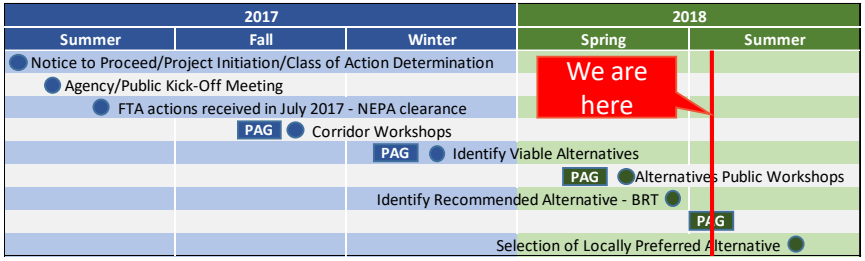

Project Schedule HRT vs. BRT

Typical Schedule Rail[1]

[1]DTPW has received EA Class of Action determination for Rail

Typical Schedule BRT[2]

[2]DTPW has received NEPA clearance from FTA for BRT

SMARTSouth@miamidade.gov www.miamismartplan.com #MiamiSMARTPlan

Ridership Results

New/Small Start Metrics	BRT	HRT
Horizon Year 2040 Forecasts		
Total Project Trips	23-25,000	36-40,000
New Transit Trips	7-11,000	16-22,000
Vehicle Miles Traveled (VMT) Reduction	160-175,000	260-290,000

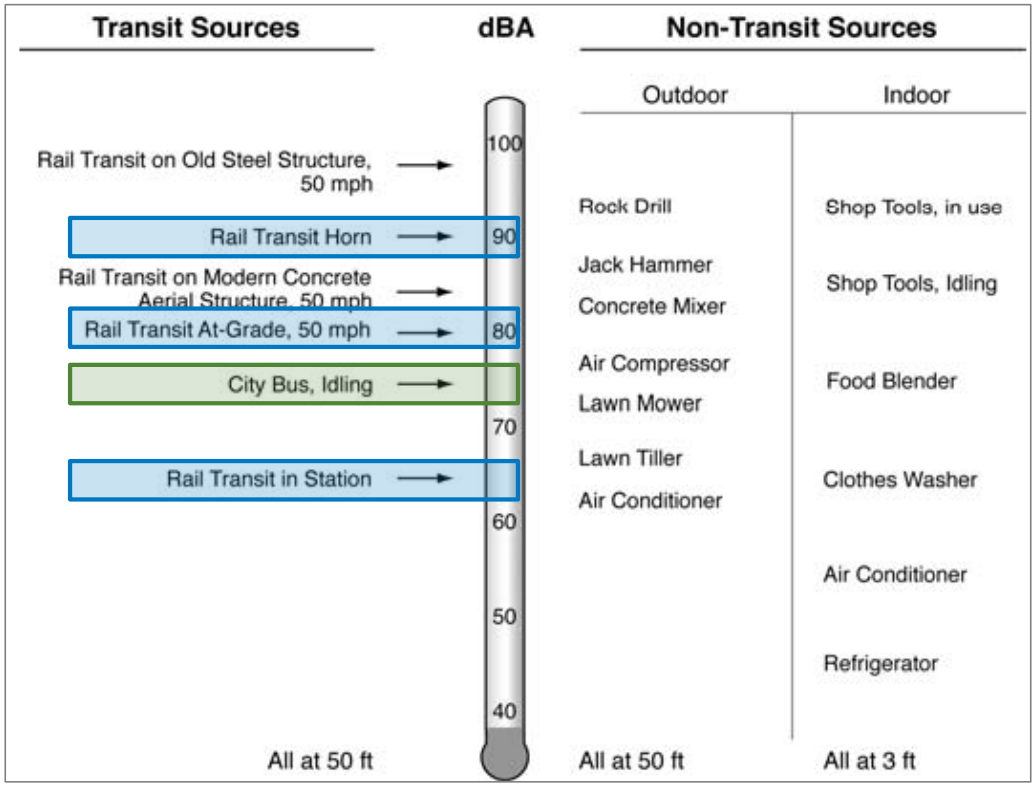

Ridership Results

- **HRT does perform better than BRT**
- **This is primarily due to no transfer at Dadeland South, better visibility and higher capacity vehicles**
- **BRT has a more robust operating plan that provides better headways than HRT in segments**
- **Investment needed for Heavy Rail vs. Bus Rapid Transit is not justified by the ridership gains**

Traffic Impact Analysis

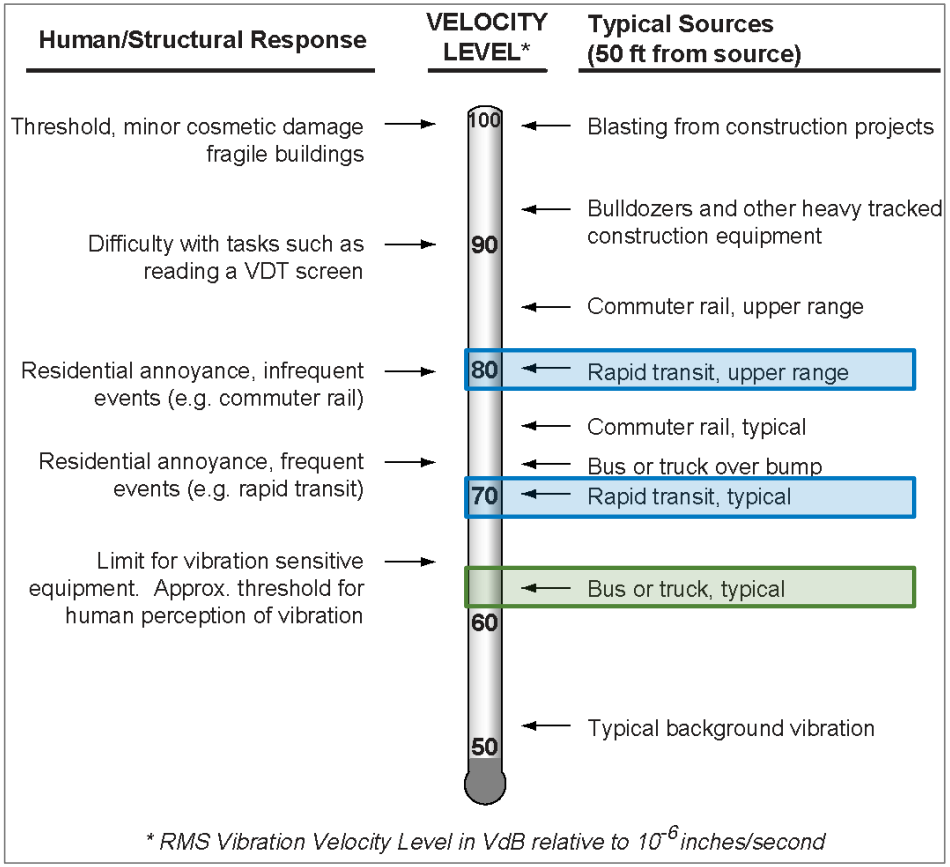

- HRT gate closures could create up to 12 interruptions to cross street traffic per hour
- Each interruption could be up to 30 to 40 seconds
- BRT gate closures could create up to 24 interruptions per hour
- Each interruption could be 15 to 20 seconds
- ***Both alternatives will impact cross street traffic***
- Significant coordination will be necessary to identify the appropriate balance between preserving cross street flows and providing transit priority regardless of the alternative chosen
- Implementation of Adaptive Signal Control would potentially minimize the cross street impacts

Noise Analysis

SMARTSouth@miamidade.gov www.miamismartplan.com #MiamiSMARTPlan

Current Federal Small Starts Opportunity

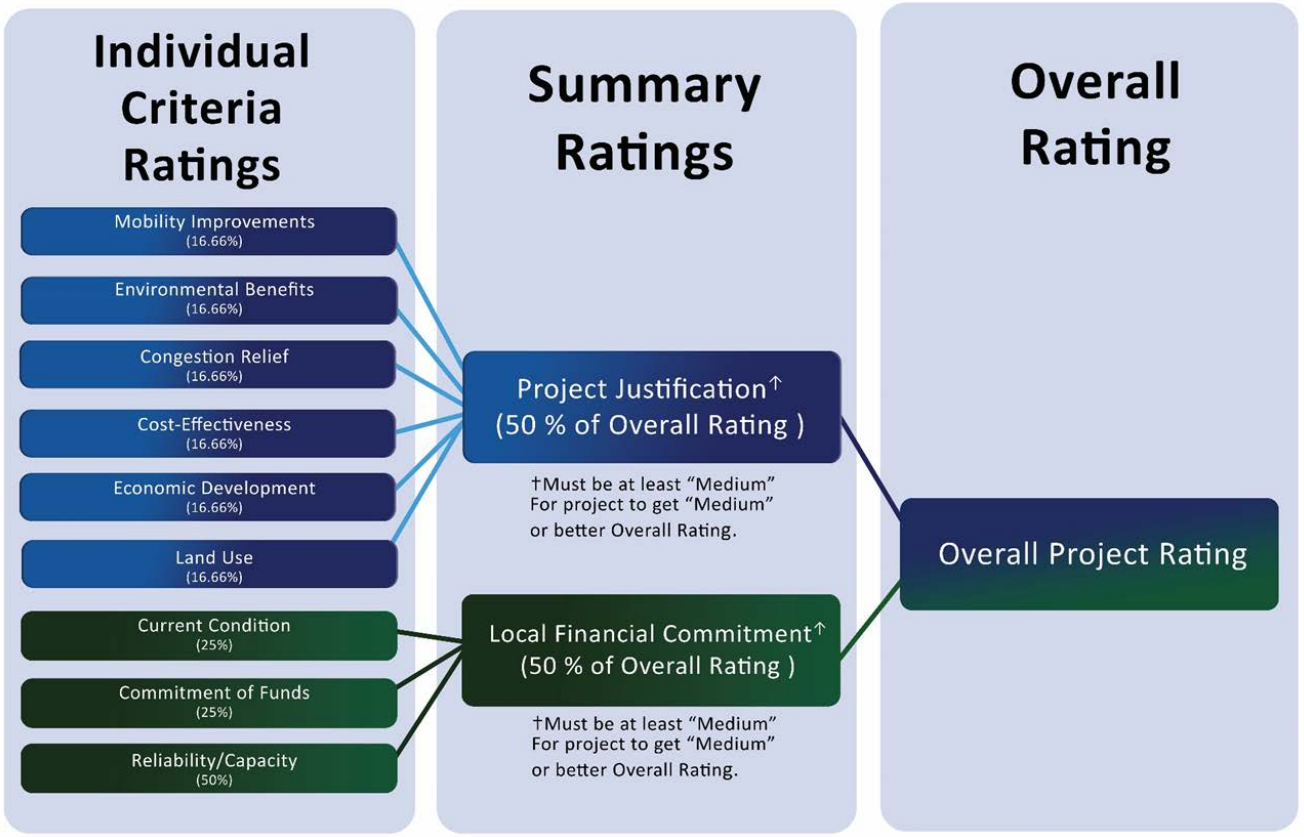

- **Small Starts program is geared toward faster delivery**
- **Project Cost under $300 million, lower federal funding support.**
- **Opportunity to apply for federal funding in the coming Fiscal Year 2019/2020**
- **Project delivery/start of operations as early as 2 to 3 years**

FTA Criteria Components SMALL STARTS

- **Project Justification**
- **Local Financial Commitment**

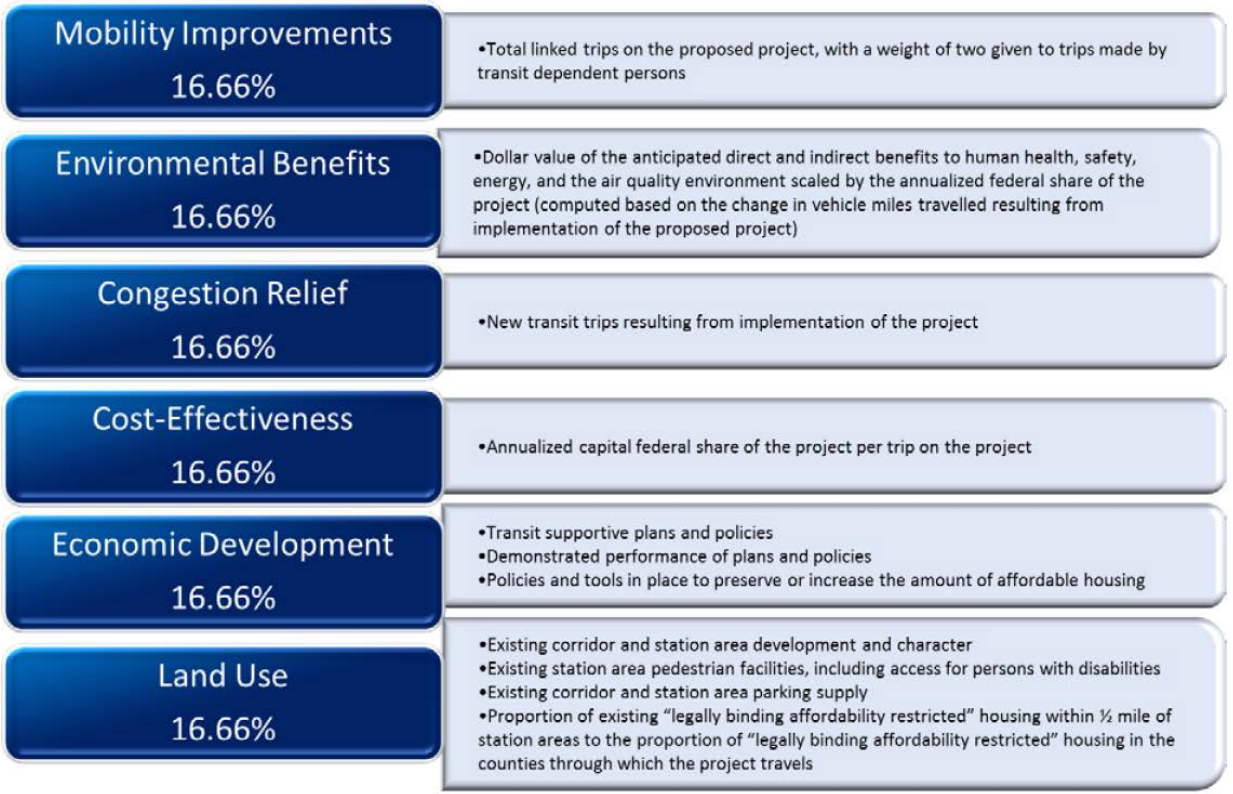

Project *must score a Medium or better* for both Project Justification and Local Financial Commitment

Project Justification Ratings

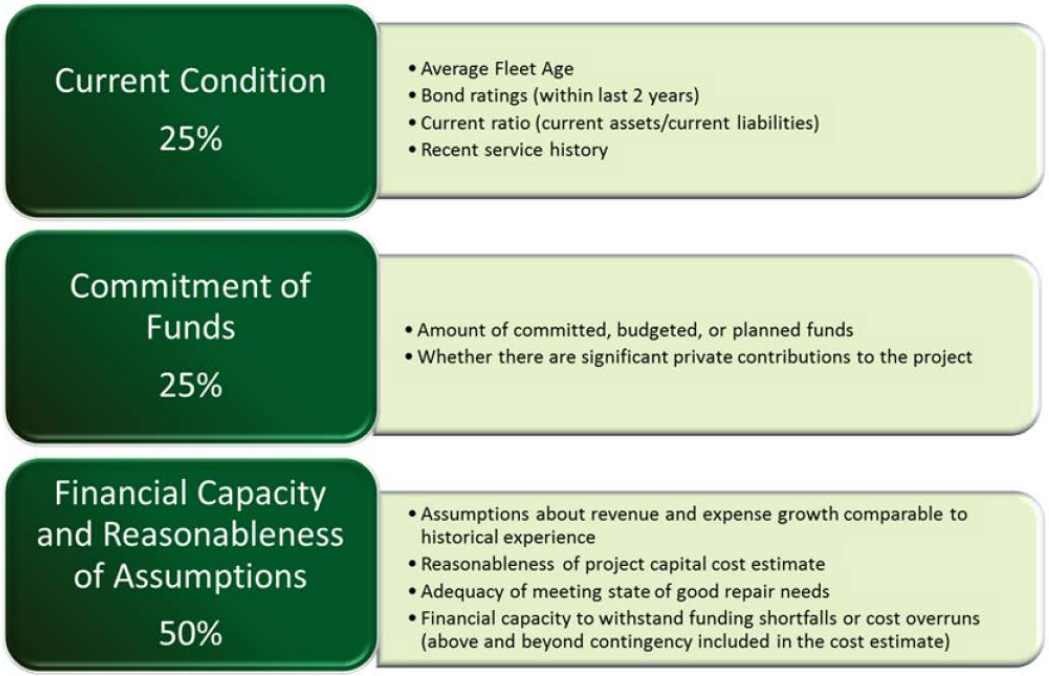

SMARTSouth@miamidade.gov www.miamismartplan.com #MiamiSMARTPlan

Project Justification: Small Starts Criteria

Project Justification: Local Financial Commitment

Project Justification Ratings

- The project justification criteria are weighted equally. Each criterion is rated on a five-point scale from Low (1)to High (5).
- Projects must score a minimum of 15 (out of 30 maximum) points to achieve a Medium rating.

Project Justification Criteria

- Mobility Improvements
- Cost Effectiveness
- Congestion Relief
- Environmental Benefits
- Economic Development
- Land Use

Preliminary FTA Criteria Ratings SMALL STARTS

BRT Project Justification Criteria	Value	Preliminary Rating	Score	
Mobility Improvements	8,250,000	Medium	3	
Congestion relief	9,300	Medium	3	
Cost effectiveness	Less than $1	High	5	
Land Use	See below	Medium or Medium-Low	2	3
Subtotal			13	14

Mobility Improvement: estimated annual trips
Congestion Relief: New weekday linked transit trips
Cost Effectiveness: (Capital + O&M Costs) / (Annual trips on project)
Land Use: Various

Preliminary FTA Criteria Ratings SMALL STARTS

BRT Land Use Criteria	Value	Preliminary Rating
Population Density	4,400	Medium-Low
Employment Served	39,500	Low
Affordable housing	3.18	High
Parking supply	Professional Judgement	Low
Pedestrian environment	Professional Judgement/review of aerial photos	Medium-Low

Preliminary FTA Small Starts Project Justification Ratings

Preliminary Small Starts Ratings for 4 of 6 Project Justification criteria (15 points need to qualify for funding):

- Mobility Improvements 3
- Cost Effectiveness 5
- Congestion Relief 3
- Land Use 2 or 3

Subtotal available data 13 or 14

Remaining Criteria (minimum possible score 1):

- Environmental Benefits 1 (assumes minimum)
- Economic Development 1 (assumes minimum)

Project Justification Rating 15 or 16 = Medium

BRT Project - Project Justification rating qualifies for Small Starts funding, if Project capital cost can be kept below $300 million

Preliminary FTA Criteria Ratings NEW STARTS

HRT Project Justification Criteria	Value	Preliminary Rating	Score
Mobility Improvements	13,000,000	Medium	3
Congestion relief	15,100	Medium-High	4
Cost effectiveness	$12-$14	Medium-Low	2
Land Use	See below	Medium-High	4
Subtotal			13

Mobility Improvement: estimated annual trips
Congestion Relief: New weekday linked transit trips
Cost Effectiveness: (Capital + O&M Costs) / (Annual trips on project)
Land Use: Various

Preliminary FTA New Starts Project Justification Ratings HRT

Preliminary Small Starts Ratings for 4 of 6 Project Justification criteria (15 points need to qualify for funding):

- Mobility Improvements 3

Recommended Alternative

BUS RAPID TRANSIT

- BRT projects are promoted nationally by the FTA giving the BRT alternative a better chance at federal funding
- Project justification results point toward a moderate level of investment as being appropriate given the County's limited ability to pay for O&M long term
- BRT allows for a significant operational improvement benefiting the riding public in the least amount of time
- BRT can help the corridor develop increased ridership while preserving a rail option for the future
- Iconic stations would support economic development to further bolster ridership and justify future expansion

Selecting the Locally Preferred Alternative (LPA)

Purpose and Need

- Identify the need for transit investment
- Determine project goals and objectives
- Define evaluation criteria

Tier 1 Definition and Evaluation: Qualitative

- Identify the universe of alternatives
- Qualitative evaluation to determine feasibility

Tier 2 Definition and Evaluation: Quantitative

- Define the remaining alternatives in detail:
  - Develop operating plan
  - Generate ridership forecast
  - Estimate capital and O&M costs
- Evaluate the alternatives in detail

Selection of Locally Preferred Alternative (LPA) July 19, 2018

SMARTSouth@miamidade.gov www.miamismartplan.com #MiamiSMARTPlan

Next Steps

1. **Finalize Technical Reports and Complete Presentations**
2. **Present Recommendation to TPO Board on *July 19, 2018***
3. **If LPA is BRT then submit Project Development Application:**

   September 2018
4. **If LPA is HRT then complete Environmental Assessment:**

   September 2019

Project Advisory Group

Final Votes

South Corridor Rapid Transit Project

Project Advisory Group (PAG) Members

Final Votes- BRT versus HRT

No.	Name	BRT/ HRT	Comments
1	Barry White	Elevated HRT	We need to be able to compete with these other countries.
2	Daniel Yglesias	HRT	No Comment.
3	Dr. Jeanne Jacobs	Elevated HRT	I'm more concerned for the safety of my students with Heavy Rail but also I'm looking at what's best for them in terms of transportation.
4	Ed Silva	HRT	If it doesn't happen now it won't happen at all.
5	James E. McDonald	BRT	No Comment.
6	Johnny Farias	Elevated HRT	No Comment.
7	Keith Kulynych	BRT	Neither option is the best option.
8	Ken Forbes	HRT	No Comment.
9	Linda Taylor	Elevated BRT	These other countries are eating us for lunch. We need to see what they are doing to improve transportation.
10	Paul J. Schwiep	HRT	I would prefer heavy rail at grade as far south as Southland Mall as the population density supports it with BRT south of there.
11	Rene Infante	HRT	No Comment.
12	Stefano Fanfani	HRT	No Comment.
13	Suzanne Bonner	HRT	HRT at grade, since the option of high speed elevated, was not an option and would have been my choice.
14	Yunior Santana	HRT	I'm here on behalf of the Mayor and he wants rail.

SOUTH CORRIDOR RAPID TRANSIT PROJECT

PROJECT DESCRIPTION

The Miami-Dade County Department of Public Works (DTPW) has initiated this study in order to determine and document the feasibility of improving the existing South Dade Transitway (formerly known as busway). This Transitway currently operates as the only dedicated busway in Miami-Dade County. The study will look at upgrading transit services along this highly travelled corridor, improving safety and mobility, while being sensitive to the needs and concerns of the surrounding communities and preserving the character of the various cities and unincorporated County areas. This corridor is also critical in terms of hurricane evacuation and as a post-disaster recovery route. The study is part of an integrated effort involving engineering analysis and environmental evaluation, and this is one of the six rapid transit corridors identified in the Strategic Miami Area Rapid Transit (SMART) plan adopted by the Miami-Dade County Transportation Planning Organization (TPO) in April, 2016.

PROJECT CHARACTERISTICS

The project extends from SW 344th Street on the south to the Dadeland South Metrorail station for a distance of approximately 20 miles. The approach to this project will be to thoroughly assess the safety, mobility and community needs of the corridor, develop alternatives to address those needs, and evaluate them according to regulatory agency requirements and community values. As part of this study and of the alternative selection process, a comprehensive public involvement program is being conducted. It consists of numerous informal and formal meetings with the general public as well as with governmental agencies, elected officials and other interested parties.

PROJECT STATUS/SCHEDULE

This study is in the planning and development stages. During this phase, the preliminary engineering as well as the preparation of all necessary environmental documentation required for state and potentially federal approval and subsequent funding is completed. An approximate 1-year timeframe is projected for this effort. This study is scheduled to be completed in March, 2018.

STUDY OBJECTIVE

This study will evaluate the implementation of a cost-effective, rapid transit system and infrastructure improvements along the Transitway as part of an overall interconnected rapid transit network. A focus on multimodal improvements to accommodate rapid transit service will be determined through an evaluation of transit options including mode, alignment, station locations and service frequency.

WHAT IS RAPID TRANSIT?

Characteristics of rapid transit include faster speeds, more frequent service, operating along an exclusive guideway and various passenger amenities at stations and in the vehicles. Examples of rapid transit modes include Bus Rapid Transit (BRT), Light Rail Transit (LRT) and Heavy Rail Transit (HRT/Metrorail).

PUBLIC INVOLVEMENT

As a member of this community, your involvement and input are vital to the success of this project. A comprehensive Public Involvement Plan is therefore a key component of this study. Public involvement will consist of formal and informal meetings with the general public, elected officials, and representatives of government agencies, municipalities, transportation providers, and other interested stakeholders throughout the duration of the study.

PROYECTO DE TRÁNSITO RÁPIDO DEL CORREDOR DEL SUR

HOJA INFORMATIVA

DESCRIPCIÓN DEL PROYECTO

El Departamento de Transporte y Obras Públicas (DTPW) del Condado de Miami-Dade ha iniciado este estudio para determinar y documentar la viabilidad de mejorar los Carriles de Tránsito de South Dade. Estos carriles de tránsito operan actualmente como el único carril de autobuses en el Condado de Miami-Dade. El estudio analizará la actualización de los servicios de tránsito a lo largo de este corredor altamente transitado, el mejoramiento de la seguridad y la movilidad, teniendo en cuenta las necesidades y las inquietudes de las comunidades aledañas y manteniendo el carácter de las diversas ciudades y áreas del condado no incorporadas. Este corredor también es fundamental para evacuación durante huracanes y como vía de recuperación después de un desastre. El estudio es parte de un esfuerzo integrado que incluye análisis de ingeniería y evaluación ambiental, y este es uno de los seis corredores de tránsito rápido en el Plan de Tránsito Rápido en Áreas Estratégicas de Miami (SMART Plan) que la Organización para la Planificación del Transporte (Transportation Planning Organization, TPO por sus siglas en inglés) del Condado de Miami-Dade adoptó en abril de 2016.

CARACTERÍSTICAS DEL PROYECTO

El proyecto inicia en la calle 344 del suroeste al sur, hasta la estación Dadeland South del Metrorail y se extiende una distancia de aproximadamente 20 millas. El enfoque de este proyecto consistirá en la valoración a fondo de la seguridad, la movilidad y las necesidades de la comunidad a lo largo del corredor, el desarrollo de alternativas para atender dichas necesidades y su evaluación de acuerdo con los requisitos de organismos normativos y los valores comunitarios. Como parte de este estudio y del proceso de selección alternativa, se está realizando un programa integral para la participación del público. Consiste de numerosas reuniones formales e informales con el público en general y con organismos gubernamentales, oficiales elegidos y otras partes interesadas.

ESTADO/PROGRAMACIÓN DEL PROYECTO

Este estudio está en las etapas de planificación y desarrollo. Durante esta fase, se completarán los estudios preliminares de ingeniería y se preparará toda la documentación ambiental necesaria que se requiere para la aprobación estatal y, posiblemente, la federal, al igual que para la financiación. Se prevé un periodo de tiempo de aproximadamente un año para este esfuerzo. Este estudio está programado para completarse en marzo de 2018.

OBJETIVO DEL ESTUDIO

Este estudio evaluará la implementación de un sistema de tránsito rentable y rápido y las mejoras a la infraestructura a lo largo de los carriles de tránsito como parte de una red de tránsito rápido global e interconectada. Para determinar un enfoque en mejoras multimodales para acomodar el servicio de tránsito rápido, se realizará una evaluación de las opciones de tránsito que incluyen modo, alineación, ubicación de las estaciones y frecuencia del servicio.

¿QUÉ ES EL TRÁNSITO RÁPIDO?

Las características del tránsito rápido incluyen velocidades más altas, un servicio más frecuente, operación a lo largo de una vía exclusiva, y diversos servicios para pasajeros en las estaciones y en los vehículos. Algunos ejemplos de modos de tránsito rápido son el Tránsito Rápido de Autobuses (Bus Rapid Transit, BRT por sus siglas en inglés), el Tránsito de Trenes Ligeros (Light Rail Transit, LRT por sus siglas en inglés) y el Tránsito de Trenes Pesados (HRT (por sus siglas en inglés)/Metrorail).

PARTICIPACIÓN DEL PÚBLICO

Por ser parte de esta comunidad, la participación y la retroalimentación del público son vitales para el éxito de este proyecto. Por este motivo, uno de los componentes más importante de este estudio es la elaboración de un Programa Integral para la Participación del Público. Esta participación constará de reuniones formales e informales con el público en general, oficiales elegidos y representantes de organismos gubernamentales, municipios, proveedores de transporte y otros actores seleccionados, las cuales se llevarán a cabo mientras dure el estudio.

SOUTH CORRIDOR RAPID TRANSIT PROJECT

FACT SHEET

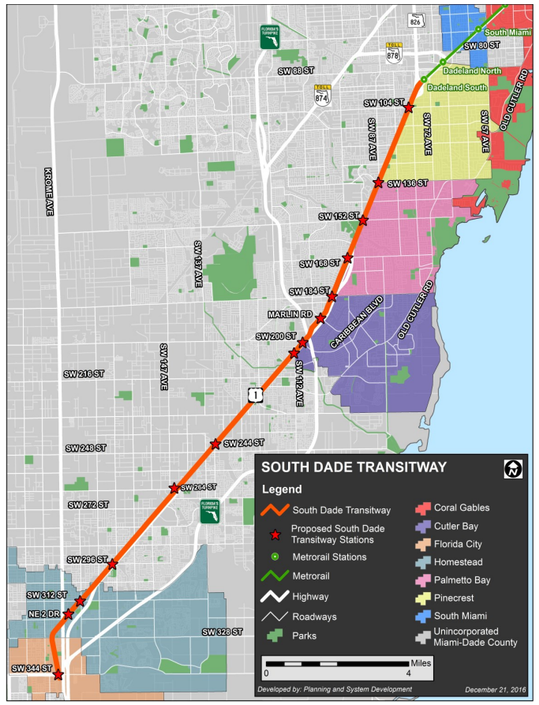

Project Overview and Limits

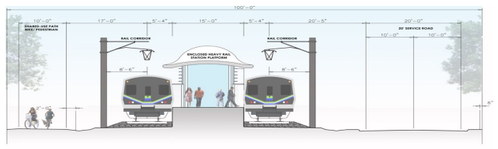

In the spring of 2017, the Miami–Dade County Department of Transportation & Public Works (DTPW) initiated the South Corridor Rapid Transit Project Development & Environment (PD&E) Study. The South Corridor is one of the six Strategic Miami Area Rapid Transit (SMART) Plan corridors being evaluated to assess and meet the safety and mobility needs of Miami-Dade County. The South Dade Transitway currently operates as the only dedicated busway in Miami–Dade County. The study area starts at SW 344th Street on the south and ends at the Dadeland South Metrorail station on the north. The study aims to identify the best alternative to upgrade the existing transit system. This corridor is also critical in terms of hurricane evacuation and as a post–disaster recovery route. DTPW is evaluating the implementation of a cost–effective, rapid transit system and infrastructure improvements along the Transitway as part of an overall interconnected rapid transit network.

Tier 1 Alternatives Evaluation

At the beginning of the study, four (4) transit mode alternatives were being considered as rapid transit options for the Transitway. After a Tier 1 analysis, the alternatives were refined to three options that would work best with the existing Metrorail system. The alternatives moving forward as a part of the Tier II analysis are as follows: 1) At-Grade Metrorail Extension; 2) At-Grade Bus Rapid Transit (BRT);(3) the Connected Autonomous Vehicle (CAV); and a No-Build option. The viable transit alternatives at this phase of the study are as follows:

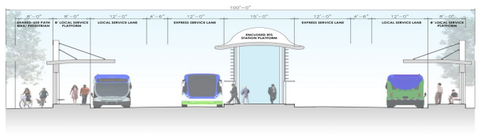

PROJECT LOCATION MAP

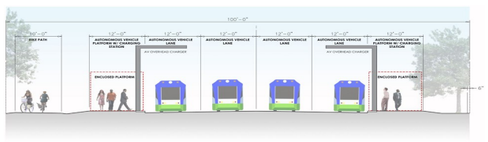

At-Grade Metrorail Extension

At-Grade Metrorail Extension is an extension of the existing Metrorail technology to the end of the South Dade Transitway using overhead electric power (catenary).

At-Grade Bus Rapid Transit (BRT)

At–Grade Bus Rapid Transit (BRT) Services provides a high–quality bus–based transit service operating with the same transit signal pre-emption as rail.

Connected Autonomous Vehicle (CAV)

Connected Autonomous Vehicle (CAV), a driverless vehicle, aims to prepare the Transitway for the new technology. CAV is considered the solution for the short trips to and from transit stops.

Stay Informed/Be Involved

For more information, contact Public Information Officer Charesse Chester at 305-944-7564 or by email at **SMARTSouth@miamidade.gov.**

www.Miamismartplan.com

#MiamiSMARTPlan

What does No-Build Mean?

The No–Build option means minor transit improvements will be implemented using existing transit funding. The Transitway would continue to carry transit vehicles and emergency service vehicles only.

Why was the Light Rail (LRT) Alternative Eliminated?

The Light Rail Transit (LRT) option was eliminated as an option for the following reasons:1) it would require a completely new fleet of vehicles; 2) it would not be able to operate on the existing Metrorail system; 3) it would require retraining of all existing operator and maintenance staff; and 4) the cost to buy land and build a new Vehicle Maintenance Facility.

Public Engagement

In the spring of 2017, DTPW conducted a kick–off public meeting. At the meeting, DTPW explained the purpose of the project, project schedule, and various opportunities for public input during the one year study process. A website (www.miamismartplan.com) was created to make meeting materials such as presentations, fact sheets, and survey information readily available to the public and interested parties. Meeting invitations were mailed to property owners and distributed at public facilities and Park & Ride lots along the corridor. Print and social media advertising as well as press releases were utilized to encourage public participation in meetings and workshops.

The study team has appeared before municipal councils and briefed the elected Miami–Dade County Commissioners representing the unincorporated areas. Additionally, a Project Advisory Group (PAG) was established to obtain input from representatives of municipalities, homeowners associations, business groups, unincorporated Miami–Dade Community Councils, churches, and educational facilities at key phases in the study. The PAG is scheduled to meet four times during the study process.

In May 2018, the public has another opportunity to give input at the Alternatives Public Workshops. At the workshops, the public will have an opportunity to review the alternatives still being considered and offer input on the station concepts. The public may submit written comments as well as speak with DTPW representatives in attendance. All meeting materials are available for review at: **www.miamismartplan.com**.

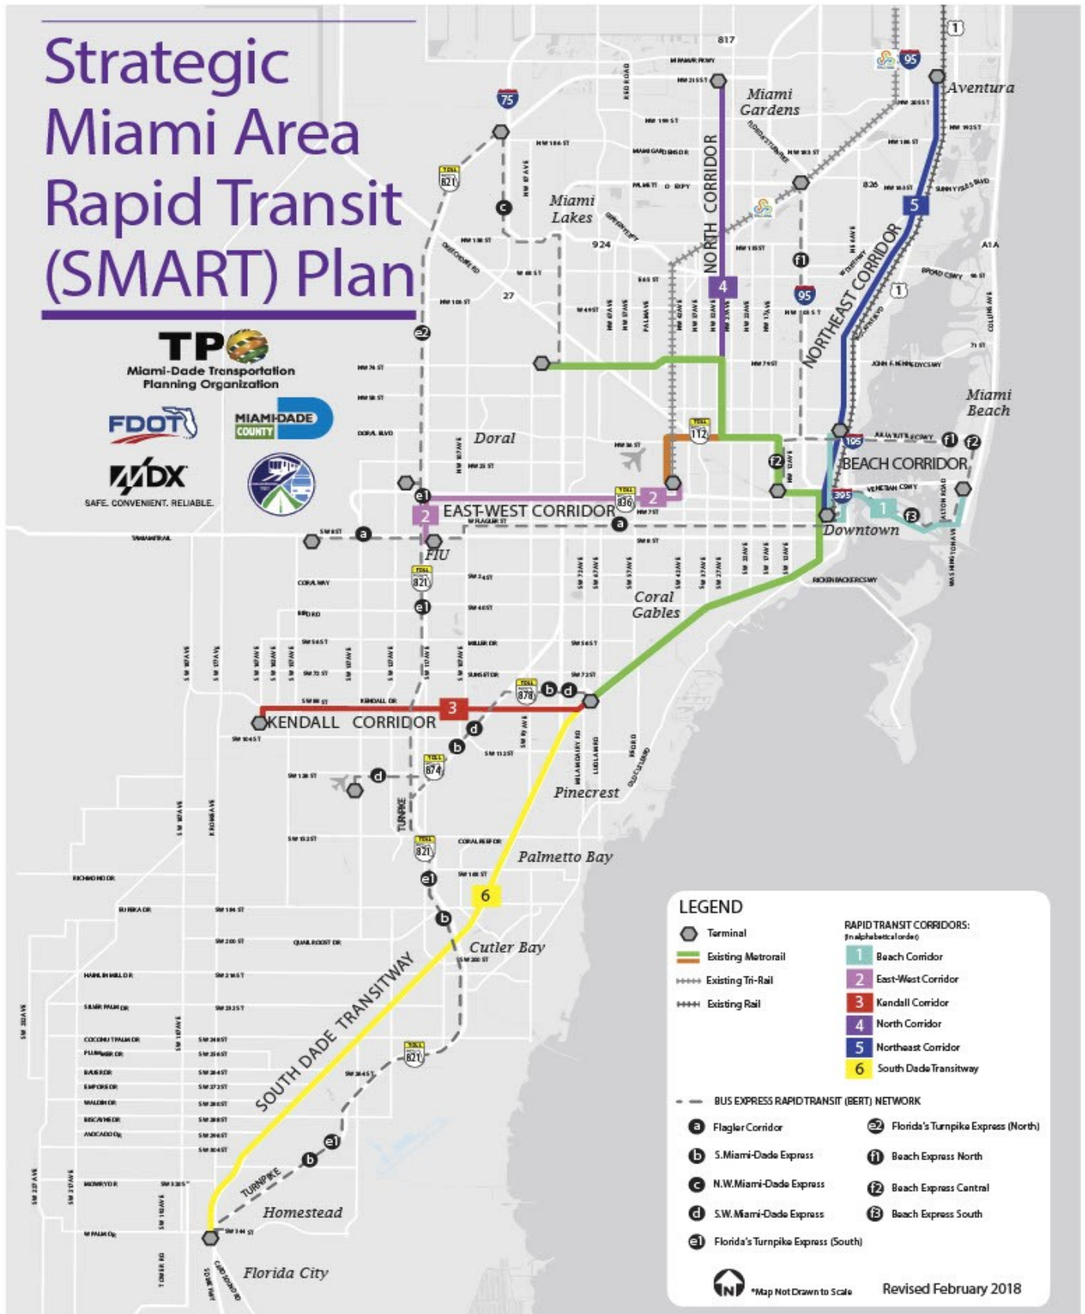

The Miami-Dade Transportation Planning Organization (TPO) is expected to select a Locally Preferred Alternative (LPA) for the Transitway in July 2018.

Proyecto del Corredor Sur de Tránsporte Rápido

HOJA INFORMATIVA

Visión General y Limites del Proyecto

En la primavera de 2017, el Departamento de Transporte y Obras Públicas del Condado de Miami-Dade (DTPW) inició el Estudio del Desarrollo e Impacto Ambiental del Proyecto de Transporte Rápido del Corredor Sur (PD&E). El Corredor Sur es uno de los seis corredores del Plan Estratégico de Transporte Rápido de Miami (SMART) que se evalúan para determinar y satisfacer las necesidades de seguridad y movilidad del Condado de Miami-Dade. Esta arteria vial opera actualmente como la única vía exclusiva de autobuses en el Condado de Miami-Dade. El área de estudio comienza en La Calle SW 344th Street en el sur y termina en la estación Dadeland South del Metrorail en el norte. El estudio tiene como objetivo identificar la mejor alternativa para actualizar el sistema de tránsito existente. Este corredor también es crítico en términos de evacuación en caso de huracanes y como ruta de recuperación luego de desastres. El DTPW está evaluando la implementación de un sistema de tránsito rápido y de mejoras en el sistema y la infraestructura a lo largo de la arteria vial como parte de una red global e interconectada de tránsito rápido.

Evaluación de Alternativas del Nivel 1

Al comienzo del estudio, se consideraron cuatro (4) posibles opciones de Transporte rápido para la arteria vial. Después de un análisis del Nivel 1, las alternativas se depuraron y quedaron tres opciones que funcionarían mejor con el sistema de Metrorail existente. Las alternativas que avanzan como parte del análisis del Nivel II son las siguientes: 1) Extensión de Metrorail a nivel; 2) Servicio de Transporte Rápido de Autobuses a nivel (BRT: Bus Rapid Transit); (3) el Vehículo Autónomo Conectado (CAV), y una opción de No-Construcción. Las alternativas de tránsito viables en esta fase del estudio son las siguientes:

www.Miamismartplan.com

#MiamiSMARTPlan

¿Qué significa No-Construccion?

La opción No-Construccion significa que se implementarán mejoras menores de Transporte usando los tondos existentes del Transporte. El Transitway solamente continuaría transportando vehículos de Transporte y vehículos de servicio de emergencia.

¿Por qué se eliminó la alternative de Trenes Ligeros (LRT)?

La alternativa de Trenes Ligeros (LRT) fue eliminada como opción por los siguientes motivos: 1) requeriría una flota de vehículos completamente nueva; 2) no podría operar en el sistema existente de Metrorail; 3) requeriría volver a capacitar a todo el personal existente; y 4) implicaría comprar terrenos y construir nuevas instalaciones para el mantenimiento de los vehículos.

Compromiso del Público

En la primavera de 2017, el DTPW realizó una reunión pública inicial. En la reunión, el DTPW explicó el propósito del proyecto, el cronograma del mismo y varias oportunidades para la participación del público durante el proceso de estudio de un año. Se creó un sitio web (www.miamismartplan.com) para poner a disposición del público y de las partes interesadas materiales para las reuniones, como presentaciones, infografías e información de encuestas. Las invitaciones a las reuniones se enviaron por correo a los dueños de propiedades y se distribuyeron en instalaciones públicas y en sitios de estacionamiento a lo largo del corredor. Mediante comunicados de prensa, se distribuyó al público información impresa y de publicidad en las redes sociales sobre las reuniones.

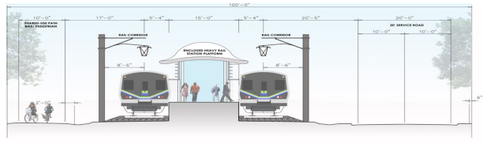

El equipo de estudio se ha presentado ante los consejos municipales y ha suministrado información a los comisionados electos del Condado de Miami-Dade que representan a las áreas no incorporadas. Además, se estableció un Grupo Asesor de Proyectos (PAG) para conocer los puntos de vista de los representantes de municipalidades, asociaciones de propietarios de vivienda, grupos empresariales, consejos comunitarios no incorporados de Miami-Dade, iglesias e instalaciones educativas en las fases clave del estudio. El PAG ha programado cuatro reuniones durante el proceso de estudio.

En mayo de 2018, el público tendrá otra oportunidad de dar su opinión en los Talleres Públicos sobre Alternativas. En los talleres, el público tendrá la oportunidad de revisar las alternativas que aún se estén considerando y opinar sobre los conceptos de la estación. El público puede enviar comentarios por escrito y hablar con representantes del DTPW que estén presentes. Todos los materiales de la reunión están disponibles para su revisión en: www.miamismartplan.com.

La Organización de Planificación de Transporte de Miami-Dade (TPO) seleccionará una Alternativa Preferida Localmente (LPA) para la arteria vial en julio de 2018.

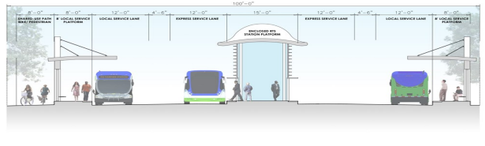

Extensión del Metrorail a Nivel (At-Grade)

La extensión del Metrorail a Nivel es una extensión de la tecnología existente de Metrorail hasta el final del South Dade Transitway.

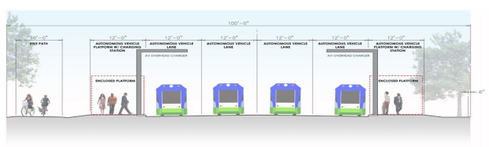

Bus de Transporte Rápido a Nivel (BRT)

Los servicios de Bus de Transporte Rápido a Nivel (BRT) brindan un servicio de transporte basado en autobuses de alta calidad
que operan con los mismos derechos preferenciales de los ser-

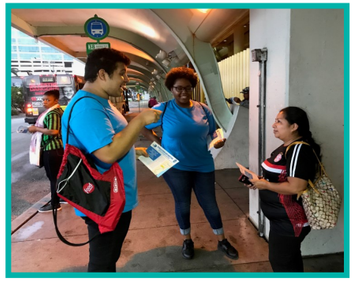

Vehículo Autónomo Conectado (CAV)

El Vehículo Autónomo Conectado (CAV, por sus siglas en inglés) es un vehículo sin conductor, cuyo objetivo es preparar el Transitway para la nueva tecnología. El CAV se considera la solución para los viajes cortos hacia y desde las paradas de tránsito.

Memo

Operations and Maintenance Methodology Memorandum

Introduction

The existing South Dade Transitway consists of a dual lane busway extending from the southern terminus of the Metrorail system at the Dadeland South station to SW 344 Street in Florida City, a distance of approximately 20 miles. The current facility operates as an at-grade transitway running along what was historically a railroad alignment. The current Miami-Dade County SMART plan includes the South Corridor as one of the six premium transit corridors to be developed in the future. The South Corridor project features four (4) Build Alternatives in addition to No-Build and Transportation System Management (TSM) alternatives as follows:

- At-grade Bus Rapid Transit (BRT) using the existing transitway with grade separations at 7 major intersections
- At-grade Light Rail Transit (LRT) along the transitway with grade separations at 7 major intersections
- At-grade Metrorail extension along the transitway with grade separations at 7 major intersections
- Connected Autonomous Vehicle (CAV) operating on a widened transitway with grade separations at 7 major intersections as a standalone alternative

This report describes the operating and maintenance (O&M) cost methodologies for the South Corridor project. Unique O&M cost models were developed for each transit technology -- Metrobus, BRT, LRT, Metrorail and CAV – using Microsoft Excel spreadsheets.

- DTPW's recent motor bus (MB) financial and operations data was used to develop the Metrobus cost model. The Metrobus cost model will be used to estimate costs for the No-Build and TSM alternatives (fixed route operations), as well as O&M costs for changes in feeder bus operations for each of the four Build alternatives. In addition, the Metrobus cost model will be adapted to estimate O&M costs for the BRT and CAV alternatives.
- DPTW's recent Metrorail financial and operations data was used to develop the Metrorail cost model. The Metrorail cost model will be used to estimate costs for the No-Build and TSM alternatives, as well as O&M costs for the Metrorail extension alternative.
- Since DPTW does not presently operate the LRT technology, a generic LRT cost model was developed using recent operations and financial data for 16 peer modern LRT systems that are similar in size to the South Corridor project. The LRT cost model will be used to estimate O&M costs for the LRT alternative.
- At present, there are no Autonomous Vehicle systems in operation that are comparable to the South Corridor CAV alternative. The CAV alternative is expected to be comprised of both private and public transit CAVs. Private CAV O&M costs will not be estimated for the South Corridor project. Public CAV O&M costs are expected to be comprised of lane and station/stop maintenance, signal maintenance, driverless bus operations, and equipment maintenance and servicing of Public CAVs. The Public CAVs are expected to be similar to existing Metrobus vehicles, albeit without a driver. Therefore, the Public CAV O&M cost model is expected to be adapted from DPTW's Metrobus cost model.

Each O&M cost model is a fully allocated model developed in accordance with FTA's previous guidance on O&M cost model development for fixed guideway projects. In other words, each model will capture all costs associated with the administration, operations, vehicle maintenance and facilities maintenance functions, including an allocation of on-going costs for support functions such as administration, finance, payroll, legal, planning, etc.

Recent fiscal year 2015 (FY 2015) National Transit Database reports were used to develop each cost model. FY 2015 cost data is typically reported by FTA function (e.g., Administration, Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance) and object class (e.g., Operator Salaries and Wages, Other Salaries and Wages, Fringe Benefits, Service, Fuel and Lube, Tires and Tubes, Other Materials and Supplies, Utilities, Casualty and Liability Costs, Taxes, Miscellaneous, and Purchased Transportation).

Typical driving variables include Vehicles Operated in Maximum Service (a.k.a. Peak Vehicles), Actual Revenue Vehicle-Miles, Actual Revenue Bus or Train-Hours, BRT Stations (BRT alternative only), Directional Miles of Rail Trackway (LRT and Metrorail alternatives only), and Maintenance Facilities (Metrobus garages or rail yards).

Each cost item (e.g., bus operator wages and salaries) will be assigned to a specific driving variable (e.g., annual revenue bus-hours). Unit costs for each line item will be calculated by dividing the FY 2015 cost by the value of the appropriate driving variable (e.g., $97,593,767 MB Operator Salaries and Wages / 2,392,090 annual revenue Metrobus bus-hours = $40.80 per revenue bus-hour). Unit costs will then be summed for all cost items having like driving variables. The annual O&M cost is represented by the general equation below:

$$\text{Annual O\&M Cost} = \sum_{i \ldots n} (\text{Unit Cost } \boldsymbol{i} * \text{Driving Variable } \boldsymbol{i}) + \ldots (\text{Unit Cost } \boldsymbol{n} * \text{Driving Variable } \boldsymbol{n})$$

where:

- Unit Cost ***i***: The sum of unit costs for all cost items assigned to driving variable ***i***.
- Driving Variable ***i***: The value of driving variable ***i*** for the calibration year (2015) or for a project alternative.

These development and validation testing of each cost model is described below.

METROBUS O&M COST MODEL

The DPTW Metrobus O&M cost model uses the following four driving variables to define its fixed route bus system. These driving variables will be calculated as part of the operating plans for all South Corridor project alternatives. All line item costs are assigned to one driving variable.

Peak Buses
Annual Revenue Bus-Miles
Annual Revenue Bus-Hours
Maintenance Facilities

This model was calibrated based on FY 2015 actual expenses and will be used along with operational and financial data inputs developed by the South Corridor project team to estimate fixed route bus O&M costs for the project alternatives. The following tables show the development and calibration of the DPTW Metrobus cost model.

The equation for calculating annual Metrobus O&M costs is as follows:

$$\text{Annual MB O\&M Cost} = \sum \$48{,}029 * \text{Peak Buses} + \$3.43 * \text{Annual Revenue Bus-Miles} + \$78.63 * \text{Annual Revenue Bus-Hours} + \$6{,}632{,}698 * \text{Bus Garages}$$

Metrobus O&M costs are estimated in 2015 dollars. Metrobus costs can be inflated to current year dollars using an assumed annual inflation rate.

Metrobus O&M Cost Model Validation Tests

A series of validation tests were conducted to determine if the Metrobus O&M cost model can reliably forecast future year O&M costs. These validation tests focused on comparing the FY 2015 and FY 2014 Metrobus operations and financial data to determine if there were any anomalies in the FY 2015 unit costs or driving variables that could skew the estimation of future service scenarios.

The first validation test, shown in the table below, compared the FY 2014 and FY 2015 expenses by Object Class. This table shows that the total Metrobus O&M cost increased by about 4.1 percent from FY 2014 to FY 2015. However, there were several Object Classes that experienced wide fluctuations in costs between the two years:

- Fuel and Lube costs decreased by nearly 35% in response to decreasing diesel fuel costs across the U.S.
- Tire and Tube costs increased by 84% during this period. It is not clear whether this large variance reflects a change in maintenance practices (i.e., changing tires more often) or is a normal year-to-year fluctuation in tire procurement.
- Casualty and Liability costs increased by more than 50%.
- No Purchased Transportation costs were incurred in FY 2015.

STEP 1. REPORT DPTW FY 2015 MB OPERATING EXPENSES BY FUNCTION AND OBJECT CLASS												
NTD Reported Operating Expense Type	**Operator Salaries and Wages**	**Other Salaries and Wages**	**Fringe Benefits**	**Service Costs**	**Fuel and Lube**	**Tires and Tubes**	**Other Materials and Supplies**	**Utilities**	**Casualty and Liability Costs**	**Taxes**	**Purchased Transportation**	**Total Operating Expenses**
Vehicle Operations	$97,593,767	$35,356,773	$39,926,358	$12,011,095	$21,114,613	$4,510,563	$3,184,880	--	--	$7,034	--	$213,705,083
Vehicle Maintenance	--	$30,718,281	$9,225,002	$10,271,328	$1,332,301	$284,610	$10,201,456	--	$4,602,373	$3,972,803	--	$70,608,154
Non-Vehicle Maintenanc	--	$4,536,369	$1,362,316	$10,462,750	--	--	$3,536,658	--	--	--	--	$19,898,093
General Administration	--	$19,208,172	$5,768,403	$4,787,088	--	--	$1,705,730	$805,940	--	--	--	$32,275,333
Total	$97,593,767	$89,819,595	$56,282,079	$37,532,261	$22,446,914	$4,795,173	$18,628,724	$805,940	$4,602,373	$3,979,837	$0	$336,486,663

STEP 2. DPTW FY 2015 MB DRIVING VARIABLES BY FUNCTION AND OBJECT CLASS											
Cost Function	**Operator Salaries and Wages**	**Other Salaries and Wages**	**Fringe Benefits**	**Service Costs**	**Fuel and Lube**	**Tires and Tubes**	**Other Materials and Supplies**	**Utilities**	**Casualty and Liability Costs**	**Taxes**	**Purchased Transportation**
Vehicle Operations	Bus-Hour	Bus-Hour	Bus-Hour	Bus-Hour	Bus-Mile	Bus-Mile	Bus-Hour	--	--	Bus-Hour	--
Vehicle Maintenance	--	Bus-Mile	Bus-Mile	Bus-Mile	Bus-Mile	Bus-Mile	Bus-Mile	--	Bus-Mile	Bus-Mile	--
Non-Vehicle Maintenanc	--	Garage	Garage	Garage	--	--	Garage	--	--	--	--
General Administration	--	Peak Bus	Peak Bus	Peak Bus	--	--	Peak Bus	Peak Bus	--	--	--

STEP 3. CALCULATION OF DPTW FY 2015 MB UNIT COSTS					
Driving Variables	**Units**	**Variable Cost**	**'15 MB Unit $**		
Vehicles Operated In Maximum Service	672	$32,275,333	**$48,029**	per Peak Bus	
Total Actual Revenue Bus-Miles	28,096,442	$96,233,330	**$3.43**	per Revenue Bus-Mile	
Total Actual Revenue Bus-Hours	2,392,090	$188,079,907	**$78.63**	per Revenue Bus-Hour	
O&M Garages	3	$19,898,093	**$6,632,698**	per Garage	
		$336,486,663			

VALIDATION TEST #1				
Compare DPTW FY 2015 to FY 2014 Total MB Operating Expenses				
Object Class	**FY 15 Expense**	**FY 14 Expense**	**Change**	**% Change**
Operator Salaries and Wages	$97,593,767	$89,189,418	$8,404,349	9.4%
Other Salaries and Wages	$89,819,595	$82,132,131	$7,687,464	9.4%
Fringe Benefits	$56,282,079	$52,226,475	$4,055,604	7.8%
Service Costs	$37,532,261	$36,088,947	$1,443,314	4.0%
Fuel and Lube	$22,446,914	$34,411,802	-$11,964,888	-34.8%
Tires and Tubes	$4,795,173	$2,603,801	$2,191,372	84.2%
Other Materials and Supplies	$18,628,724	$16,889,887	$1,738,837	10.3%
Utilities	$805,940	$761,284	$44,656	5.9%
Casualty and Liability Costs	$4,602,373	$3,062,344	$1,540,029	50.3%
Taxes	$3,979,837	$4,299,301	-$319,464	-7.4%
Purchased Transportation	$0	$1,610,259	-$1,610,259	-100.0%
Total Operating Expenses	$336,486,663	$323,275,649	$13,211,014	4.1%

The second validation test, shown below, compared the FY 2014 and FY 2015 operating characteristics. This test shows if there were any major service increases or decreases that may affect operating expenses and unit costs. Overall, operating characteristics were very stable between the two years, with 1.0% to 3.0% reductions in most service parameters (e.g., peak buses, bus-miles and bus-hours). Only two characteristics showed any significant changes between the two years:

- Annual Metrobus ridership decreased by 6.4% -- about two to three times the rate of service reductions. Decreased ridership was likely a result of lower fuel prices in 2015.
- As DPTW cancelled its purchased transportation contract, the number of Metrobus garages decreased from 4 to 3.

VALIDATION TEST #2			
Compare FY 15 to FY 14 MB Units			
	FY 15 Units	**FY 14 Units**	**% Change**
Peak Bus	672	679	-1.0%
Fleet Bus	813	833	-2.4%
Average Age of Fleet	10.9	11.5	-5.2%
Annual Rev. Bus-Miles	28,096,442	28,953,282	-3.0%
Annual Rev. Bus-Hours	2,392,090	2,432,923	-1.7%
Annual Passenger Trips	72,386,524	77,356,941	-6.4%
MB Garages(1)	3	4	-25.0%
BRT Stations(2)	0	0	N/A
(1) FY 2014 NTD report includes 1 PT Garage.			
(2) South Busway BRT stations not reported in NTD.			

Finally, a third validation test was performed that compared unit costs for FY 2014 and FY 2015. Unit costs for FY 2014 were calculated in the same manner as for FY 2015. The change in unit costs, then, reflects both the change in operating expenses (Validation Test #1) as well as the change in operating characteristics (Validation Test #2). Overall, the average total Metrobus O&M cost per bus-hour increased by 5.9% which resulted from the 4.1% increase in expenses and the 1.0% to 3.0% reduction in service levels. Interestingly, the bus-mile unit cost decreased by 1.3%, largely a result of reduced fuel costs, while the peak bus unit cost (mostly Administration costs) increased by 7.6% and the bus-hour unit cost (mostly Vehicle Operations costs) increased by 10.1%. The largest variation is the unit cost per garage, which increased by almost 42% due to the termination of the purchased transportation contract and the subsequent reduction in MB garages from 4 to 3.

VALIDATION TEST #3			
Compare FY 15 to FY 14 MB Total Unit Costs			
	FY 15 Unit $	FY 14 Unit $	% Change
Peak Bus	**$48,029**	**$44,640**	7.6%
Bus-Mile	**$3.43**	**$3.47**	-1.3%
Bus-Hour	**$78.63**	**$71.44**	10.1%
Garage[(1)]	**$6,632,698**	**$4,682,605**	41.6%
Avg Cost per Bus-Hr	$140.67	$132.88	5.9%
	2015 unit costs are 6% > 2014		
(1) FY 2014 NTD report includes 1 PT Garage.			

Metrobus O&M Cost Model Adjustments

First, the validation tests indicated that there were several significant changes in operations and financial data from FY 2014 to FY 2015 including lower fuel costs, rising insurance costs and the cancellation of the purchased transportation contract (and subsequent reduction in garages from 4 to 3). In addition, the Metrobus average fleet age is 10.9 years (in FY 2015), which may contribute to increased vehicle maintenance and fuel costs. These factors may affect the ability of the Metrobus O&M cost model to accurately forecast future changes in Metrobus O&M costs. Therefore, the South Corridor project team should meet with DPTW operations and finance staff to ascertain the causes of these anomalies and determine if any adjustments to FY 2015 unit costs are warranted.

Second, the Metrobus cost model will also be used to estimate annual O&M costs associated with the BRT alternative. Since the BRT alternative will function similarly to existing local and express buses, the model unit costs, with a few exceptions, should be accurate to forecast BRT costs. The South Corridor project team should meet with DPTW staff to identify differences in BRT operations that may result in higher or lower unit costs.

- If the BRT is operated with articulated buses, vehicle maintenance and fuel costs will be slightly higher than for standard 40' buses.

- The ongoing maintenance of BRT lanes and BRT stations may need to be added to the Metrobus O&M cost model. This can be accomplished by adding a fifth driving variable, BRT Stations, and unit cost to the model. Prior research of other BRT systems indicates that annual BRT station maintenance costs are about $10,000 to $30,000 per station per year, depending on the size and functionality of the BRT stations.
- The provision of Smart Card ticket vending machines (TVM) and ticket validators (TV) to the BRT stations will require additional servicing and maintenance costs for those units.

METRORAIL O&M COST MODEL

The DPTW Metrorail O&M cost model uses the following four driving variables to define the Metrorail system. These driving variables will be calculated as part of the operating plans for all South Corridor project alternatives. All line item costs are assigned to one driving variable.

1. *Peak Vehicles*
2. *Annual Revenue Car-Miles*
3. *Annual Revenue Train-Hours*
4. *Directional Track-Miles*

This model was calibrated based on FY 2015 actual expenses and will be used along with operational and financial data inputs developed by the South Corridor project team to estimate Metrorail O&M costs for the project alternatives. The following tables show the development and calibration of the DPTW Metrorail cost model.

The equation for calculating annual Metrorail O&M costs is as follows:

$$\text{Annual Metrorail O\&M Cost} = \sum \$142{,}211 * \text{Peak Vehicles} + \$3.44 * \text{Annual Revenue Car-Miles} + \$368.13 * \text{Annual Revenue Train-Hours} + \$430{,}579 * \text{Dir. Track Miles}$$

Metrorail O&M costs are estimated in 2015 dollars. Metrorail costs can be inflated to current year dollars using an assumed annual inflation rate.

Metrorail O&M Cost Model Validation Tests

A series of validation tests were conducted to determine if the Metrorail O&M cost model can reliably forecast future year O&M costs. These validation tests focused on comparing the FY 2015 and FY 2014 Metrorail operations and financial data to determine if there were any anomalies in the FY 2015 unit costs or driving variables that could skew the estimation of future service scenarios.

The first validation test, shown in the table below, compared the FY 2014 and FY 2015 expenses by Object Class. This table shows that the total Metrorail O&M cost

increased by about 7.3 percent from FY 2014 to FY 2015. However, there were several Object Classes that experienced wide fluctuations in costs between the two years:

- Fuel and Lube costs decreased by nearly 35% in response to decreasing diesel fuel costs across the U.S.
- Tire and Tube costs increased by 84% during this period.
- Casualty and Liability costs increased by more than 50%.

STEP 1. REPORT DPTW FY 2015 HRT OPERATING EXPENSES BY FUNCTION AND OBJECT CLASS												
NTD Reported Operating Expense Type - FY 2015	**Operator Salaries and Wages**	**Other Salaries and Wages**	**Fringe Benefits**	**Service Costs**	**Fuel and Lube**	**Tires and Tubes**	**Other Materials and Supplies**	**Utilities**	**Casualty and Liability Costs**	**Taxes**	**Miscellaneous Expenses**	**Total Operating Expenses**
Vehicle Operations	$5,353,245	$8,211,875	$4,073,739	$9,582,248	--	--	$4,683,182	$8,536,317	--	--	--	$40,440,606
Vehicle Maintenance	--	$7,955,509	$2,389,118	$1,031,158	$1,363,103	$155,489	$7,164,127	--	--	--	--	$20,058,504

STEP 3. CALCULATION OF DPTW FY 2015 HRT UNIT COSTS				
Driving Variables	**'15 Units**	**Variable Cost**	**'15 HRT Unit $**	
Vehicles Operated In Maximum Service	80	$11,376,918	**$142,211**	per Peak Car
Total Actual Revenue Car-Miles	8,306,783	$28,594,821	**$3.44**	per Rev. Car-Mile
Total Actual Revenue Train-Hours	86,666	$31,904,289	**$368.13**	per Rev. Train-Hour
Directional Miles of Rail Trackway	58.3	$25,102,741	**$430,579**	per Dir. Route-Mile
		$96,978,769		
	Average:	$1,118.99	per Train-Hr	
	Average: 4-Car Trains			

VALIDATION TEST #1				
Compare DPTW FY 2015 to FY 2014 Total Metrorail Operating Expenses				
Object Class	**FY 15 Expense**	**FY 14 Expense**	**Change**	**% Change**
Operator Salaries and Wages	$5,353,245	$4,892,247	$460,998	9.4%
Other Salaries and Wages	$29,503,757	$26,963,022	$2,540,735	9.4%
Fringe Benefits	$10,467,901	$9,710,911	$756,990	7.8%
Service Costs	$21,538,104	$20,709,850	$828,254	4.0%
Fuel and Lube	$1,363,103	$2,089,679	-$726,576	-34.8%
Tires and Tubes	$155,489	$84,431	$71,058	84.2%
Other Materials and Supplies	$17,995,489	$16,315,758	$1,679,731	10.3%
Utilities	$9,286,717	$8,772,160	$514,557	5.9%
Casualty and Liability Costs	$1,314,964	$874,955	$440,009	50.3%
Taxes	$0	$0	$0	N/A
Miscellaneous Expenses	$0	$0	$0	N/A
Total Operating Expenses	$96,978,769	$90,413,013	$6,565,756	7.3%
Source: FY 2014 and FY 2015 National Transit Database reports.				

The second validation test, shown below, compared the FY 2014 and FY 2015 operating characteristics. This test shows if there were any major service increases or decreases that may affect operating expenses and unit costs. Overall, operating characteristics were very stable between the two years. Only one characteristic showed any significant changes between the two years -- Annual Revenue Car-Miles increased by 4.1%.

VALIDATION TEST #2			
Compare FY 15 to FY 14 Metrorail Units			
	FY 15 Units	**FY 14 Units**	**% Change**
Peak Vehicles	**80**	**80**	0.0%
Fleet Vehicles	**136**	**136**	0.0%
Average Age of Fleet	**33**	**32**	3.1%
Annual Rev. Car-Miles	**8,306,783**	**7,976,759**	4.1%
Annaul Rev. Tr-Hours	**86,666**	**87,411**	-0.9%
Annual Passenger Trips	**21,910,609**	**21,751,409**	0.7%
Metrorail Stations	**23**	**23**	0.0%
Dir. Trackway Miles	**58.3**	**58.3**	0.0%
Source: FY 2014 and FY 2015 National Transit Database reports.			

A third validation test was performed that compared unit costs for FY 2014 and FY 2015. Unit costs for FY 2014 were calculated in the same manner as for FY 2015. The change in unit costs, then, reflects both the change in operating expenses (Validation Test #1) as well as the change in operating characteristics (Validation Test #2). Overall, the average total Metrorail O&M cost per bus-hour increased by 8.2%.

VALIDATION TEST #3			
Compare FY 15 to FY 14 Metrorail Total Unit Costs			
	FY 15 Unit $	FY 14 Unit $	% Change
Peak Vehicles	**$142,211**	**$127,464**	11.6%
Annual Rev. Car-Miles	**$3.44**	**$3.41**	0.9%
Annaul Rev. Tr-Hours	**$368.13**	**$339.04**	8.6%
Dir. Trackway Miles	**$430,579**	**$400,837**	7.4%
Avg. Cost per Train-Hour	$1,119	$1,034	8.2%
	2015 unit costs are 8% > 2014		

Metrorail O&M Cost Model Adjustments

First, the validation tests indicated that the only significant change in financial data from FY 2014 to FY 2015 was increasing insurance costs. However, the average age of DPTW's Budd cars is 35 years (in FY 2015). As new cars replace the aging Budd cars, vehicle maintenance costs and staffing will be affected. The South Corridor project team will meet with DPTW operations and finance staff to determine if any adjustments to FY 2015 unit costs are warranted.

Second, the Metrorail cost model will also be used to estimate annual O&M costs associated with the Metrorail extension alternative. The Metrorail extension is expected to operate similarly to existing Metrorail operations, except that the extension will have some at-grade intersections. This will necessitate the use of an overhead power collection system rather than a third rail. Also, the at-grade operations are expected to result in lower maximum and average speeds on the extension. The South Corridor project team should meet with DPTW staff to identify differences in Metrorail extension operations that may result in higher or lower unit costs.

- Will existing Metrorail trains continue on to the South Corridor extension or will passengers have to transfer between trains at the Dadeland South station? If Metrorail trains continue operation on the extension, many passengers will experience a one-seat ride to their final destination. However, the four-car trains currently in operation on the Orange and Green lines may provide more capacity on the South Corridor extension than is needed. If South Corridor trains terminate at Dadeland South station, many passengers will experience a two-seat ride to their final destination but the South corridor trains can be better sized to meet the ridership demand (e.g., two-car trains may suffice). These operating plan options may affect some model unit costs (e.g., traction power and station maintenance costs may be reduced if smaller trains and stations are used) and the values of some driving variables will change. Forecasts of O&M costs will be affected by the operating plan assumptions.
- Maintenance of an overhead catenary system (poles and wires) will have different inspection and preventive maintenance requirements than a third rail system. The Metrorail unit cost for Directional Track Miles will need to be adjusted to reflect these different maintenance requirements.

- The conversion of Metrorail cars to accommodate both third rail and overhead catenary power collection systems may also affect ongoing vehicle maintenance costs. It is expected that vehicle maintenance costs may increase as maintainers would have to make sure that both power collection systems are operational. The Metrorail unit cost for Annual Revenue Car-Miles may need to be adjusted to reflect these different maintenance requirements.

LRT O&M COST MODEL

Since Light Rail Transit (LRT) does not currently operate in the South Florida region, an O&M cost model was developed based on actual financial and operating data for comparable modern LRT systems. Recent operations and financial data were collected for U.S. peer LRT systems. Potential peer LRT systems were first screened to eliminate the very large (and aging) LRT systems in New York, Boston, Philadelphia, San Francisco and Chicago. The 16 peer LRT systems include:

- Portland, OR
- Seattle, WA
- Baltimore, MD
- Norfolk, VA
- Charlotte, NC
- Minneapolis, MN
- Houston, TX
- Dallas, TX
- St. Louis, MO
- Salt Lake City, UT
- Denver, CO
- Santa Clara, CA
- Sacramento, CA
- San Diego, CA
- Los Angeles, CA
- Phoenix, AZ

LRT O&M Cost Model Description

The LRT O&M cost model uses comparable data, FY 2015 National Transit Database financial and operations data, and a similar approach in assigning operating expenses to one of the following four driving variables. These driving variables will be calculated as part of the operating plans for the South Corridor project LRT alternative. All line item costs are assigned to one driving variable.

1. *Peak Vehicles*
2. *Annual Revenue Car-Miles*
3. *Annual Revenue Train-Hours*
4. *Directional Track-Miles*

The primary differences between the Metrorail and LRT cost models are that: (1) the LRT cost model is based on the aggregate operations and financial data of 16 LRT systems instead of just one (Metrorail) and (2) the LRT cost model assigned operating expense data by function to one of four driving variables since more detailed cost data by function and object class was not reported by every peer LRT system. General Administration costs were assigned to peak vehicles, Vehicle Operations costs were assigned to annual revenue train-hours, Vehicle Maintenance costs were assigned to annual revenue car-miles, and Non-Vehicle Maintenance costs were assigned to directional track miles. While this is very similar to the approach used to assign

Metrorail costs, some individual cost items, such as traction power costs, may have been assigned to peak vehicles or train-hours instead of car-miles. The following tables show the source data and calculation of the LRT unit costs.

The equation for calculating annual LRT O&M costs is as follows:

$$\text{Annual LRT O\&M Cost} = \sum \$273{,}748 * \text{Peak Vehicles} + \$2.77 * \text{Annual Revenue Car-Miles} + \$214.67 * \text{Annual Revenue Train-Hours} + \$181{,}748 * \text{Dir. Track Miles}$$

LRT O&M costs are estimated in 2015 dollars. LRT costs can be inflated to current year dollars using an assumed annual inflation rate.

Since the LRT technology is not currently operated in South Florida, the following general operating assumptions were made for the South Corridor project LRT alternative.

1. **Operating Entity**

   It is assumed that the LRT system would be directly operated by DPTW since that agency already has expertise in operating and maintaining its Metrorail and Metromover systems.

2. **Fare Collection and Structure**

   Almost all peer modern LRT systems use a proof-of-payment (POP) fare collection system. The POP fare collection system assumed for the LRT model uses ticket vending machines (TVMs) and ticket validators (TVs) located onboard LRT station platforms. Roving Fare Inspectors ride LRT trains and perform proof of payment inspection duties.

3. **Contract Philosophy**

   Since the South Corridor LRT line would be limited in size and would not be directly connected to other possible LRT lines, it may be more cost-effective for DPTW to contract certain functions to private contractors. Contracted tasks could include major campaigns to replace or repair major components (e.g., engine rebuilding, axle and wheel work, seat repair, HVAC equipment), major corrective repair of vehicles (e.g., body and paint work following an accident) and repair and servicing of fare collection equipment.

4. **Yards**

   Since the LRT vehicles would not be able to operate on Metrorail lines, the O&M cost model assumes the South Corridor LRT alternative will have a maintenance yard dedicated for LRT administration, operations and vehicle maintenance, servicing and storage.

LRT O&M Cost Model Validation Tests

A series of validation tests were conducted to determine if the LRT O&M cost model can reliably forecast future year O&M costs. These validation tests focused on comparing the FY 2015 and FY 2014 LRT operations and financial data to determine if there were any anomalies in the FY 2015 unit costs or driving variables that could skew the estimation of future service scenarios.

The first validation test, shown in the table below, compared the FY 2014 and FY 2015 expenses by Function. This table shows that the total LRT O&M cost increased by about 5.8 percent from FY 2014 to FY 2015. Generally, LRT costs were fairly stable between the two years; only the General Administration function experienced a significant fluctuation in costs between the two years. Overall, the LRT General Administration function accounts for about 24% of total LRT costs; the Metrorail General

Administration function accounts for only about 12% of total Metrorail costs. This difference in General Administration costs suggests that DPTW has been able to use economies of scale in spreading administration costs to its large MB and Metrorail systems.

VALIDATION TEST #1					
Compare FY 15 to FY 14 Peer LRT Operating Expenses					
Function		**FY 15 Expense**	**FY 14 Expense**	**Change**	**% Change**
Vehicle Operations		$31,023,967	$29,744,009	$1,279,958	4.3%
Vehicle Maintenance		$15,314,514	$14,628,245	$686,269	4.7%
Non-Vehicle Maintenance		$14,359,200	$14,063,359	$295,840	2.1%
General Administration		$18,974,165	$16,846,905	$2,127,260	12.6%
Total Operating Expense		$79,671,845	$75,282,518	$4,389,327	5.8%
		Average LRT costs increased by 6% from FY 14 to FY 15			

The second validation test, shown below, compared the FY 2014 and FY 2015 LRT unit costs for the 16 peer systems. Overall, the average total O&M cost per train-hour increased by just 1.4% from 2014 to 2015. Only the General Administration function had a significant increase in its unit cost.

VALIDATION TEST #2			
Compare FY 15 to FY 14 Peer LRT Unit Costs			
Function & Driving Variable	**FY 15 Unit $**	**FY 14 Unit $**	**% Change**
Vehicle Operations/Train-Hour	$214.67	$214.82	-0.1%
Vehicle Maintenance/Car-Mile	$2.77	$2.73	1.5%
Non-Vehicle Maintenance/DRM	$181,748	$182,360	-0.3%
General Administration/Peak Car	$273,748	$253,099	8.2%
Average LRT Cost per Train-Hour	$551.29	$543.70	1.4%
Average LRT unit costs increased by 1.4% from FY 14 to FY 15			

A third validation test was performed that compared the size of average peer LRT system to the approximate size of the South Corridor LRT alternative. (South Corridor LRT operating statistics were derived from the SMART Vision Plan, Fall 2016.) Generally, the South Corridor LRT alternative would be about one-half the size of the average peer LRT system. Even though it would be smaller in size than most of the peer LRT systems, the South Corridor would be comparable to several of the smaller systems including Seattle, Baltimore, Norfolk, Charlotte and Phoenix.

VALIDATION TEST #3				
Compare LRT Peer Average to South Corridor				
		Peer Average	South Corridor	
Peak Cars		69	32	(1),(2)
Fleet Cars		94	40	(1),(2)
Annual Revenue Car-Miles		5,522,622	3,021,500	(1),(2)
Annual Revenue Train-Hours		144,519	68,840	(1)
Directional Route Miles		79	42	(1)
Rail Stations		40	13	(1)
Maint. Facilities		1.8	1	(1)
(1) South Corridor operatings statistics based on SMART Vision Plan (Fall 2016).				
(2) Assumes 2-car LRT trains on South Corridor.				

Finally, the LRT unit costs were compared to similar unit costs for the Metrorail O&M cost model (described in the previous section). Metrorail, which is a "Heavy Rail Transit" technology, is expected to have higher unit costs than LRT systems since HRT systems are typically more complex to operate and maintain. Nonetheless, a comparison between the two models provides valuable insight into cost differences among the modes. As shown in the table below, if the peer LRT unit costs were applied to Metrorail system characteristics, the LRT technology would be about 31% less expensive to operate than Metrorail's HRT technology. (However, the LRT technology would be slower, have less seat capacity than Metrorail and would likely carry fewer riders.) LRT costs would be expected to be less than Metrorail or HRT costs due to several factors:

- The Metrorail system is entirely grade separated, which results in much faster speeds than LRT, but is also more costly to maintain.
- Metrorail stations, which are also grade separated, are significantly larger and more complex (requiring escalators and elevators for vertical circulation) than typical at-grade LRT stations. The larger stations result in much higher station maintenance costs.
- The Metrorail system requires more advanced signal, communications and train control systems than almost all LRT systems. These Metrorail systems result in higher Vehicle Operations and Non-Vehicle Maintenance unit costs than comparable LRT systems, but result in safer, more reliable operations.
- Most LRT systems use 1, 2 or 3-car trains (the peer LRT average train consist is 2.2 cars per train); Metrorail typically uses 4-car trains. As a result, LRT systems typically operate fewer car-miles than comparable HRT systems.

VALIDATION TEST #4			
Compare FY 2015 Metrorail to LRT Unit Costs			
	HRT Unit $	**LRT Unit $**	**% Compare**
Peak Vehicles	**$142,211**	**$273,748**	-48.1%
Annual Rev. Car-Miles	**$3.44**	**$2.77**	24.1%
Annual Rev. Tr-Hours	**$368.13**	**$214.67**	71.5%
Dir. Trackway Miles	**$430,579**	**$181,748**	136.9%
Est. Annual O&M Cost	$96,978,769	$74,135,553	30.8%
	Metrorail unit costs are 31% > LRT		

LRT O&M Cost Model Adjustments

The LRT validation tests indicated that the only significant change in financial data from FY 2014 to FY 2015 was increased General Administration costs. Similarly, when comparing Metrorail and LRT unit costs, the Metrorail cost model had a lower unit cost for Peak Vehicles (General Administration). The South Corridor project team should meet with DPTW operations and finance staff to determine if there is a basis for applying a reduced General Administration / Peak Vehicle unit cost to LRT operations in recognition of DPTW's economies of scale.

CONNECTED AND AUTONOMOUS VEHICLE O&M COST MODEL

As an emerging technology, there are no Autonomous Vehicle systems in operation that are comparable to the South Corridor CAV alternative. The AV alternative is expected to be comprised of both private and public transit CAVs. Private CAV O&M costs will not be estimated for the South Corridor project. Public CAV O&M costs are expected to be comprised of lane and station/stop maintenance, signal maintenance, driverless bus operations, and equipment maintenance and servicing of Public CAVs. The Public CAVs are expected to be similar to existing Metrobus vehicles, potentially without a driver. Therefore, the Public CAV O&M cost model is expected to be adapted from DPTW's Metrobus cost model.

The general equation for calculating annual Metrobus / CAV O&M costs is as follows:

$$\text{Annual MB / CAV O\&M Cost} = \sum \$48{,}029 * \text{Peak Buses} + \$3.43 * \text{Annual Revenue Bus-Miles} + \$78.63 * \text{Annual Revenue Bus-Hours} + \$6{,}632{,}698 * \text{Bus Garages}$$

CAV O&M costs are estimated in 2015 dollars. CAV costs can be inflated to current year dollars using an assumed annual inflation rate.

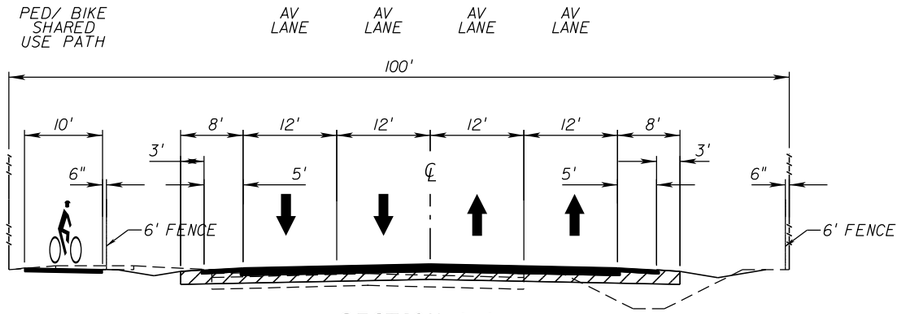

CAV O&M Cost Model Adjustments

CAV public bus operations practices and maintenance requirements are expected to differ from Metrobus operations in a number of ways. The South Corridor project team should meet with DPTW operations and finance staff to further define the CAV

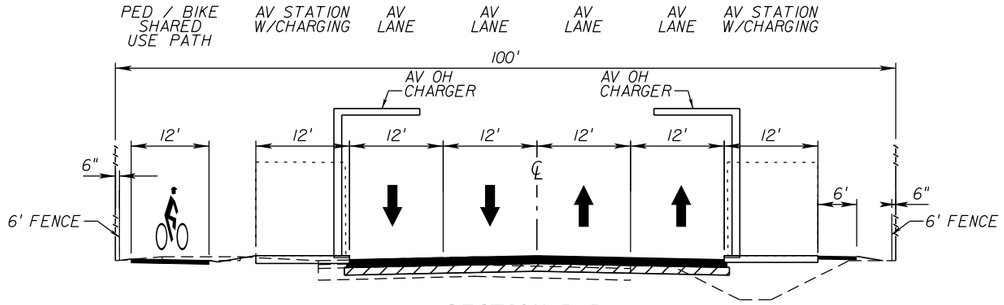

alternative, how it will differ from Metrobus operations, and what adjustments need to be made to the MB O&M model to accurately reflect the CAV alternative. The following are some of the expected operations changes that may require adjustments to the Metrobus model:

- CAV public transit vehicles may differ in size and seat capacity from standard 40' city buses. The different vehicles may affect the CAV operating plans (e.g., number of peak vehicles required, revenue bus-hours) as well as vehicle maintenance unit costs.
- The CAV alternative is expected to require additional lane and station maintenance costs, possibly similar to costs for BRT systems. Like the BRT model adjustments, a fifth unit cost and driving variable (e.g., CAV stations or CAV lane miles) may be added to the Metrobus model.
- The CAV alternative may also require a more sophisticated signal system and enforcement of CAV lane regulations. As the CAV alternative is further defined, these additional costs may be reflected in adjustments to the Metrobus / CAV cost model.
- The CAV alternative may also require advanced data analytics and cybersecurity requirements that allow for the system to operate. As the alternative is further defined, these additional costs may be able to be estimated and be reflected in the Metrobus CAV cost model.
