

# MIAMI-DADE COUNTYWIDE TRANSPORTATION MASTER PLAN

# FACT SHEET

The Miami-Dade County Department of Transportation and Public Works (DTPW) is developing a comprehensive implementation framework called the Countywide Transportation Master Plan (CTMP). The CTMP will streamline transit, pedestrian, bicycle, freight, roadway, and other transportation infrastructure projects being carried out by Miami-Dade County over the next 20 years. The Master Plan will establish criteria that will evaluate and prioritize all DTPW's transportation projects, through a methodical, fair, equitable and efficient process. The plan will identify needs through public outreach, considering existing conditions and modal gaps. The CTMP integrates into federal planning documents, such as the Long-Range Transportation Plan and the Transportation Improvement Program, providing the County with a single prioritized project list for all modes.

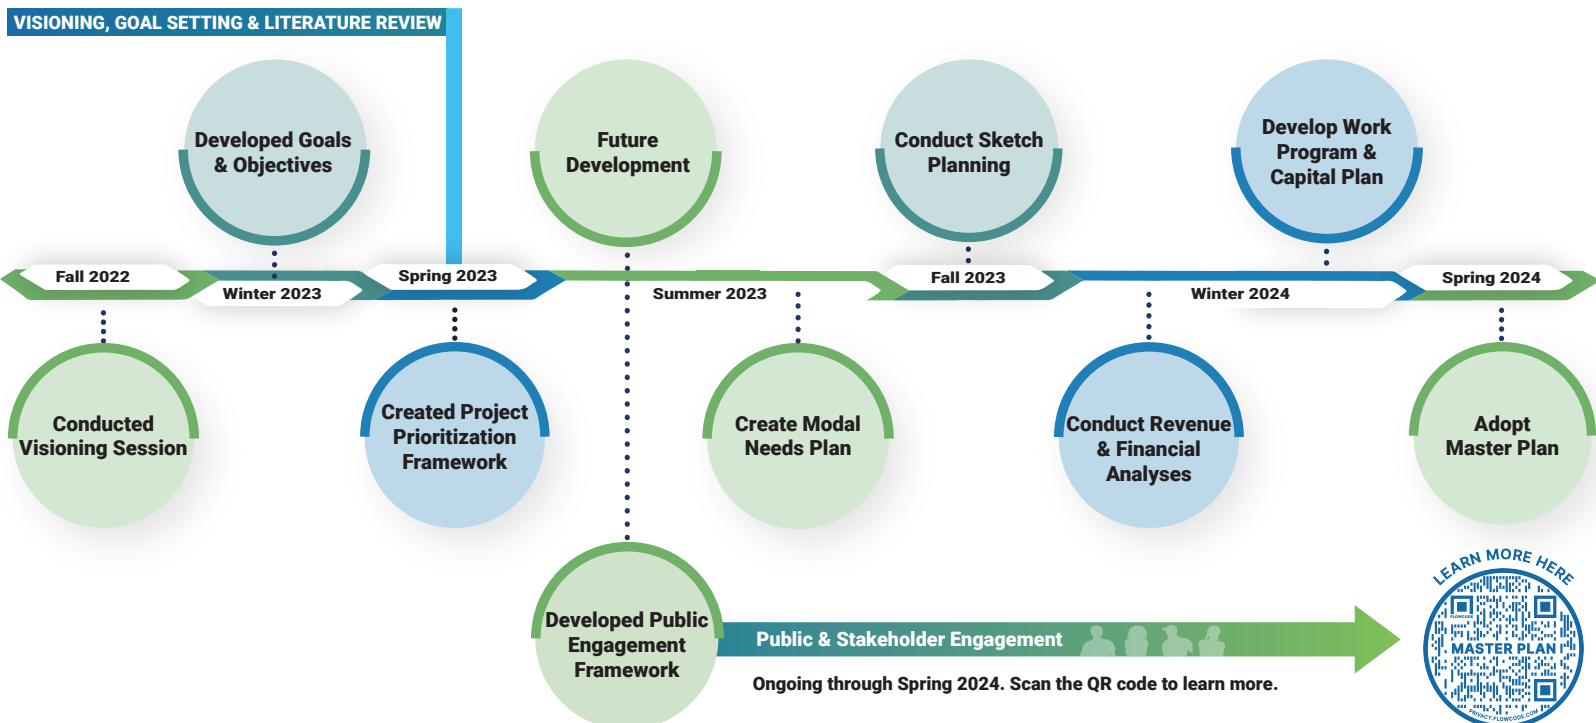

## VISION

Develop an integrated multi-modal plan for Miami-Dade County, focusing on prioritization and implementation to enhance transportation infrastructure. The plan aims to create a more efficient, connected, safe, and clean transportation system, ultimately improving the overall quality of life for residents.

## GOAL

Establish a clear prioritization for transportation projects of all modes and networks within Miami-Dade County that will be completed over the next 20 years, and foster engagement with communities and municipalities to facilitate smoother project delivery and implementation.
