

# **PUMP STATION IMPROVEMENT PROGRAM DESIGN CONSULTANTS**

## **Scope of Services**

A pool of five (5) consultants will be chosen for this function. The consultants will complete all design work required to complete the pump station remedial action plans (RAP) as required by the Consent Decree between Miami-Dade County the USEPA and FDEP. In fulfilling the above function, the design consultant's responsibilities will include but are not limited to:

- Preparing property surveys.
- Geotechnical reports.
- Engineering drawings.
- Technical specifications
- Cost estimates.
- Obtain all needed permits.
- Review all shop drawings associated with the projects
- Processing requests for information during the construction phase.
- Provide support, including site visits, during the construction phase.
- Final project certification with the permitting agencies.

## **Experience and Qualifications**

Any firm submitting should be a full service engineering firm experienced in all phases of wastewater engineering, including design, permitting and construction of wastewater collection and transmission systems, including gravity collection systems, sewage pump stations and transmission force mains.

**Estimated Cost: \$15 Million** (to be distributed among the five (5) selected consulting firms)
