APPENDIX A - BMP IMPLEMENTATION.....	A

INTRODUCTION

On November 15, 2007, the South Florida Water Management District (SFWMD) Governing Board approved the Miami-Dade Consolidated Water Use Permit (WUP). On November 1, 2010, the SFWMD Governing Board approved the reissuance of the permit extending the WUP for an additional three years. On December 16, 2012, the permit was reissued to increase the permitted allocation and to modify the water supply for the South Miami Heights Water Treatment Plant to include allocation from the Floridan aquifer.

To comply with the Permit requirements, MDWASD developed a 20-year Water Use Efficiency (WUE) Plan using the Florida Department of Environmental Protection Conserve Florida Guide (Guide). The Guide is a web-based application for goal-based water conservation planning. MDWASD was the first utility in the State to use the Guide to develop, administer and report its water conservation program.

The implementation of the Best Management Practices (BMPs) included in the Conserve Florida Plan guarantees that MDWASD will meet the projected 19.6 million gallons a day (MGD) water savings target by 2026, as required by the Permit. Current water savings have surpassed the projected 2012 cumulative savings target, by more than 2.85 MGD.

MDWASD hereby submits the sixth Water Conservation Plan Annual Progress Report detailing the County's actions and efforts to comply with Limiting Condition 48 of the WUP.

SUMMARY

Miami-Dade County's Water Use Efficiency (WUE) Program was implemented utilizing the Florida Department of Environmental Protection (DEP) Conserve Florida Guide. The web-based guide for public water suppliers was used for developing, implementing, and now reporting on the water conservation measures and best management practices (BMPs) of Miami-Dade's WUE program. The use of quantifiable BMPs and measures has assisted in reviewing and evaluating planned and reported water savings on an annual basis to ensure the implementation of a cost-effective conservation program.

To ensure future water savings, the Water Use Efficiency Standards for new residential and commercial developments, which were enacted by the Miami-Dade Board of County Commissioners on January 1, 2009, are being implemented through local building codes. The standards included technical amendments to the Building Code to require maximum water conservation flow rates for plumbing fixtures.

The County continues to implement the Permanent Landscape Irrigation Restrictions Ordinance which limits landscape irrigation to two days a week. A written advisory notice is sent to follow up on formal complaints that are received through either the County's 3-1-1 system or via a web-based e-mail system.

The County has also enacted a tiered water rate structure which includes a surcharge for high water use to encourage water conservation.

Miami-Dade County is currently experiencing actual finished water demands 44 MGD lower than what was anticipated in November 2007. The lower demands are the result of lower than anticipated population growth, along with the implementation of the County's irrigation restrictions, Water Loss Reduction Program, and Water Use Efficiency Program.

SECTION I - PLAN IMPLEMENTATION

The Conserve Florida BMPs that MDWASD has implemented as part of the Water Use Efficiency Plan are shown in this Report in Appendix A. Overall, the projected water savings for 2012 has exceeded projections, with an annual savings of more than 1.6 MGD.

As a result of the implementation of the BMPs and the landscape irrigation restriction measures, Miami-Dade County has continued to see a lower than expected per capita water consumption. Figure 1 reflects the historical systemwide per capita, showing the effectiveness of all of MDWASD's water efficiency strategies.

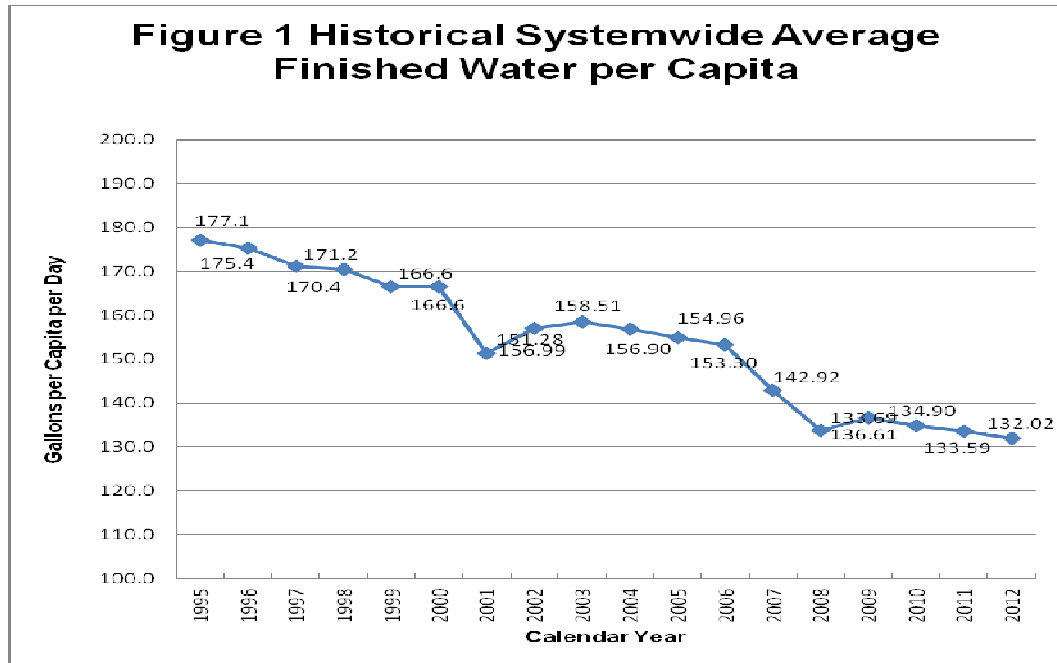

Table 1, the Water Savings Projections Table, shows both the actual and projected water saving information generated from the Conserve Florida Guide's Reporting Module. This Table also includes population and per capita projections for the 20-year Plan horizon.

Water Savings Projection Report Summary

		Demand (mgd)						Per Capita Demand (gpcd)			
		Water Savings (mgd)		With Conservation			Population		With Conservation		
Year	Planned	Reported	Without Conservation	Planned	Actual	Forecasted	Actual	Without Conservation	Planned	Actual	
2007	1.09	1.212308	348.89	347.38	319.46	2250944	2235179	155	154.33	142.92

Table 1

* Based on assumption of equal conservation in five-year period

Notes:

1. Data from 2001 to 2007, per 11/1/10 WUP, Table F
2. Flows and per capita from 2008 to 2012, per finished water flows reported to SFWMD
3. Population served from 2009 to 2012 estimated from BEBR

**APPENDIX A - BMP IMPLEMENTATION
THROUGH DECEMBER 31, 2012**

BMP Implementation for: High Efficiency Toilet & Retrofit Kit
Category: Retrofit
Sector: Single Family –Senior and Low Income Retrofit Project
Cost per Account: \$300.00
Note Project ended October 2012

Year		Units	Savings/Account (Address) Gallons/account/day	Total Savings (gal/day)
2007	Planned	750	64	48,000
	Reported	890	64	56,960
	Difference	140		8,960
2008	Planned	1000	64	64,000
	Reported	1124	64	71,936
	Difference	124		7,936
2009	Planned	1000	64	64,000
	Reported	1000	64	64,000
