## **Product Control Advisory Verification of Supporting Testing for Roof System Assemblies at Time of Submittal**

To address the concerns raised regarding the continued acceptability of previously provided supporting information for roofing system assemblies, Miami-Dade Product Control Section will be requiring the following for all Roof System submittals:

- Applicants must submit the test reports (uplift and comparative testing) and supporting documentation required to establish new system or to maintain existing roof system assemblies as listed in NOA approvals.
- All test reports (or an accompanying addendum) must contain the required test specimen description information necessary to verify the applicable assembly's deck descriptions and system components.
- Roof system assemblies supported by FM Approval constructions must also include the applicable current RoofNav #.

Note: Copies of original reports that have been confirmed to have been previously submitted are acceptable.

If you have any questions, please contact our office at 786-315-2590.

Thank you.
